P R E F A C E.

THE present volume has been written by Mr. Eugene W. Oates, who is well known to Ornithologists as the Editor of the second edition of Mr. Allan Hume's 'Nests and Eggs of Indian Birds,' and as the author of the earlier volumes of the 'Aves' in the 'Fauna of British India.' That he has performed his task conscientiously will be easily perceptible from a perusal of the following pages.

The Collection of Birds' Eggs in the British Museum now exceeds a total of 50,000 specimens. It was arranged and labelled some few years ago by Miss Emily Mary Sharpe, under the direction of the late Mr. Henry Seebohm and her father, Dr. Bowdler Sharpe. On that occasion Mr. Seebohm presented to the Trustees the whole of his collection of eggs of Palæarctic Birds, and an opportunity was thus offered of re-arranging the entire series in the Museum. At the same time the valuable donations of Mr. A. O. Hume, Messrs. Salvin and Godman, Mr. Berkeley James, and other friends of the Museum, were incorporated.

The original collection of Birds' eggs in the British Museum was rendered of little worth by the exposure of many precious specimens to the light of the public galleries, and by the mounting of the study collection on wooden tablets. Most of these specimens have perished, or have become so bleached as to be worthless for purposes of study.

A series of the eggs of British birds, illustrating even those of species included as 'rare' or 'accidental visitors' to the British

Islands, has been carefully arranged for exhibition in the Pavilion of the Bird-Gallery, and has proved of great assistance to students of the eggs of our native species of birds.

It is to be regretted that the whole of the first volume of this Catalogue was printed before the valuable bequest of eggs by the late Mr. Philip Crowley could be incorporated; but in the future volumes of the Catalogue the collection bequeathed by Mr. Crowley to the nation, one of the most valuable of the donations of recent years, will be duly chronicled.

I have to acknowledge much assistance in editing the present volume from Dr. Bowdler Sharpe, the Assistant Keeper in charge of the Sub-Department of Vertebrata.

E. RAY LANKESTER,
Director.

British Museum (Natural History),
February 25, 1901.

INTRODUCTION.

THE only Catalogue of the Birds' Eggs in the Collection of the British Museum which has hitherto been published was prepared by the late Mr. G. R. Gray, and issued by the Trustees in 1852. It treats only of the eggs of British birds, but does not furnish a history of the specimens.

The present Catalogue deals with all the eggs contained in the Collection of the Museum with the exception of those in the Exhibition Galleries, which have often to be replaced. A convenient opportunity is thus afforded for reviewing the history of the entire collection from its earliest commencement. Many ancient eggs dating from the time of Montagu and Bullock are still preserved in the Museum, but they are bleached and faded almost beyond recognition, having been exposed to the light for many years in the Museum galleries.

An early donation seems to have been made in 1842 by Mr. D. W. Mitchell. It consisted of some eggs of British birds, chiefly from Cornwall. In 1844 Sir T. Wilson presented the Trustees with some specimens from Norway. In 1847 a small donation of sea-birds' eggs from the Mauritius was made by Admiral Sir E. Belcher; and in the next year Dr. Rae contributed some specimens taken by him in Repulse Bay, Arctic America.

In 1850, Captain Stanley, the Commander of H.M.S. 'Rattlesnake,' presented to the Museum the eggs collected, during the voyage of that ship, by Dr. J. Macgillivray, the naturalist to the Expedition. All the specimens are of great interest and are well authenticated. In the same year the Trustees purchased a collection of eggs made in South Greenland by Governor Holböll.

In 1851, two collections passed into the Museum. One was acquired from Mr. A. D. Bartlett, and the other was presented by Sir George Grey, then Governor of New Zealand.

In 1852, the Trustees received a small collection made by Dr. Lyall during the voyage of H.M.S. 'Acheron' in New Zealand

waters; and also a considerable general collection, presented by Mr. H. F. Walter.

Two donations were made in 1853: one by Mr. E. L. Layard of the eggs of Ceylonese birds, and one by Sir Kenneth Loftus of eggs collected in Persia and Mesopotamia.

No more acquisitions appear to have been made for three years; but in 1856 a small collection from India was presented by Professor Oldham, and another from Australia by Sir D. Cooper.

In 1858, the Trustees were presented with a rather large collection of British birds' eggs by Mr. F. Bond; and in 1859 with one formed by Dr. Lyall during the voyage of H.M.S. 'Plumper' in the Northern Pacific Ocean. In the same year a collection made by Mr. T. Ayres in Natal was acquired.

A considerable interval again elapsed without any accessions to the Collection; but in 1863 Mr. J. K. Lord presented the specimens he had taken in the Rocky Mountains and British Columbia, while attached to the North American Boundary Commission, and in the same year a valuable collection was received from Mr. Bernard R. Ross, from the Saskatchewan and Mackenzie River Districts of Canada.

With the exception of a donation in 1869 from Mr. E. L. Layard of specimens collected in South Africa, no additions were made to the Collection till 1875, when Mr. S. O. Sahlin presented a series of Swedish eggs.

In 1876, a particularly fine collection of eggs, procured by the Rev. A. E. Eaton in Kerguelen Island during the 'Transit of Venus' Expedition, was presented to the Trustees by the Royal Society.

The accessions in 1878 consisted of a small number of specimens from Samoa and other islands of the Pacific Ocean, procured by the Rev. S. J. Whitmee; and the small collection made by Sir George Nares's Expedition to the Polar Sea in the 'Alert' and 'Discovery,' of which ships Col. H. W. Feilden and Mr. C. Hart were respectively the naturalists.

In 1879, Admiral A. H. Markham contributed a few specimens taken in Novaya Zemlya during his voyage in the 'Isbjorn.'

In 1880, the valuable collection formed during the Voyage of H.M.S. 'Challenger' was received by the Trustees; also a collection made by Sir Hugh Low in Borneo, as well as the eggs obtained by Dr. R. W. Coppinger during the cruise of H.M.S. 'Alert.'

In 1881, the acquisition of the late John Gould's collection of eggs of Australian and European birds was a notable event.

In 1884, the Museum received two small collections, one made by Mr. John Whitehead in Corsica, and the other by Mr. E. W. Oates in Burma.

In 1885, a particularly valuable series of eggs of Madagascan birds was acquired from the Rev. W. Deans Cowan. They are the only specimens from this island in the Museum, and their value cannot be over-estimated.

It was in 1885, and almost simultaneously, that the magnificent collections formed by Mr. Allan O. Hume, C.B., and Messrs. Osbert Salvin and F. DuCane Godman were presented to the Trustees. These collections were of such magnitude that some time necessarily elapsed before they were finally incorporated with the general collection and made available for study.

The Hume Collection consists almost entirely of the eggs of Indian birds. Mr. Hume seldom or never purchased a specimen, and the large collection brought together by him in the course of many years was the result of the willing co-operation of numerous friends resident in India and Burma. Every specimen in the collection may be said to have been properly authenticated by a competent naturalist; and the history of most of the clutches has been carefully recorded in Mr. Hume's 'Nests and Eggs of Indian Birds,' of which two editions have been published.

The Salvin-Godman Collection is of a more general character. As might be expected, it is rich in eggs of American birds. Not only did the above-named naturalists themselves collect in Central America, but they also purchased several important collections, chief among which should be mentioned that of Mr. T. K. Salmon, who formed a remarkably fine collection in the United States of Colombia. The Henshaw Collection of eggs of North-American birds was afterwards acquired by Dr. Godman; and the Smithsonian Institution appears to have been ever ready to present specimens to these two well-known naturalists. The large collection made by Salvin in Algeria, upwards of forty years ago, is most valuable, not only on account of the rarity of many of the specimens but for the absolute authenticity of their identification. The eggs of European birds are well represented; and a small number of Indian specimens were received from Mr. E. L. Layard (Ceylon) and Capt. R. C. Beavan (Bengal).

In 1887, a small but valuable collection of eggs from Norfolk Island was presented by Dr. W. M. Crowfoot.

In 1888, two small donations were received: one from Lieut.-Col.

Willoughby Verner of eggs obtained by him in the Soudan; the other from the Royal Society, consisting of the specimens taken on the island of Fernando Noronha by Mr. H. N. Ridley.

In 1890 the bequest of Dr. R. McCormick, consisting chiefly of sea-birds' eggs obtained during his voyages in the 'Erebus' and 'Terror,' was received by the Trustees. Also a collection made by Mr. W. D. Cumming in the Persian Gulf, and a few specimens brought by Mr. St. George Littledale from Central Asia.

Considerable additions were made in 1891. Foremost among these was the donation by Mr. Howard Saunders of his well-known series of eggs of Gulls and Terns. Professor George Dawson's collection, formed while he was engaged on the North American Boundary Commission, was of considerable interest. The following small contributions were also made:—A collection made by Mr. J. J. Lister in the islands of the Pacific Ocean; one made by Captain Collinson, Commander of H.M.S. 'Enterprise,' in Arctic America; and, lastly, some eggs taken in North-west Australia by Mr. J. J. Walker, during the voyage of H.M.S. 'Penguin,' presented by the Admiralty.

In 1893, Mr. F. A. Philbrick, Q.C., presented a collection of eggs of Australian birds formed by his son, mostly in Gippsland, Victoria; and Sir W. M. Conway gave some specimens from the Himalayas.

It was in 1893 that the late Henry Seebohm presented his fine collection of eggs to the Trustees. This valuable gift was brought to the Museum in instalments, and Seebohm was engaged for two years, with the assistance of Miss Emily Sharpe, in arranging and incorporating his specimens with the general collection of the Museum. In fact, he undertook to rearrange the whole series of eggs in accordance with the 'Catalogue of Birds,' which was then approaching completion, and to incorporate the Hume, the Salvin-Godman, and some minor collections together. This task was fortunately completed before his death, and he left the bulk of the collection arranged in most methodical order, with the name of each species and the history of each clutch of eggs carefully recorded, not only in the cabinets but also in a Catalogue which occupies ten volumes of manuscript. The eggs of the *Passeriformes* were arranged by Miss Emily Sharpe, under her father's direction. Seebohm's labours, as may be imagined, have greatly facilitated the writing of the present Catalogue.

Seebohm's Collection was composed almost entirely of the eggs of Palearctic species of birds. Not only was he a most energetic traveller and successful collector himself in many countries of Europe and in Siberia, but he was in constant communication with many well-known naturalists on the Continent. He also acquired some reliable collections, the most noticeable of which was the excellent collection of British birds' eggs got together by that sterling naturalist, the late Edward Hargitt, R.I.

In 1894, the Museum received a small collection made by Mr. O. V. Aplin in Uruguay, and another, presented by Mr. S. Butcher, of specimens taken on the Arabian Coast.

In 1895, Colonel J. W. Yerbury presented some birds' eggs obtained by him near Aden, and Mr. Alexander Fry a series from Rio de Janeiro.

The accessions in 1896 and 1897 consisted of a few eggs taken by Mr. A. W. Anthony on the Revillagigedo islands and the islands of the Gulf of California, and presented by him. With the purchase of the Steere collection of Philippine birds, the Trustees also acquired an interesting series of eggs.

No less than five collections were received in 1898. First in importance was the fine series of eggs of Chilian birds bequeathed to the Trustees by Mr. H. Berkeley James. Almost equally important was the one formed by Mr. A. H. Holland in the Argentine Republic, and purchased by the Museum. The other collections, though small, were of great interest. Sir John Murray presented the eggs taken by Dr. C. W. Andrews on Christmas Island, in the Indian Ocean; from Mr. John Whitehead were purchased the specimens obtained by him in the Philippine Islands; and Captain G. E. H. Barrett-Hamilton presented the birds' eggs collected by him in the islands of Bering's Straits, in the Northern Pacific.

In 1899 the acquisitions were small but of great interest. A set of eggs collected by the Webster-Harris Expedition to the Galapagos Islands was added to the Collection, as well as a small number of authenticated specimens from Costa Rica, collected by Mr. C. F. Underwood, while Dr. Cuthbert Christy presented some interesting eggs collected by him on the Niger.

In 1900 a large contribution of the eggs of North-American birds, collected by Mr. W. E. D. Scott, was received in exchange from the Princeton University, New Jersey; a small collection of Australian eggs was presented by Mr. Donald Mackintosh;

several eggs were received from Mr. C. A. Barnard, a well-known collector in New Guinea and Northern Australia; Mr. E. S. Moulden of Adelaide also presented some interesting specimens; and a few eggs, taken by Mr. A. B. Percival in British Central Africa, were also purchased.

Since the commencement of 1901 a very fine collection of the eggs of Chinese birds has been presented by Mr. C. B. Rickett. Sir George Newnes has also given to the Museum a first set of the specimens brought back by the 'Southern Cross' Expedition to the Antarctic Ocean. This selection comprises the eggs of three species of sea-birds not previously represented in the Museum.

In addition to the above, it will be seen from the following pages that presents of specimens have been received from many naturalists. Among these may be mentioned the Hon. C. Baring, the late A. H. Everett, Colonel H. W. Feilden, Mr. W. R. Ogilvie Grant, Dr. A. Günther, Mr. Charles Hose, Colonel L. H. Irby, Mr. F. G. Jackson, Mr. F. J. Jackson, C.B., Sir H. H. Johnston, K.C.B., the late Lord Lilford, the late Sir Henry Peek, Captain G. Savile Reid, Dr. P. L. Selater, Dr. R. Bowdler Sharpe, and Mr. R. J. Ussher. Many valuable eggs, laid in confinement, have been presented from time to time by the Zoological Society of London.

In this Catalogue, the arrangement and nomenclature of Dr. Bowdler Sharpe's 'Hand-list of the Genera and Species of Birds' have been adopted. This 'Hand-list' and the 'Catalogue of the Birds in the British Museum' have been invariably quoted throughout the present work. The other references have been selected with the view to present as complete a history of the eggs and nesting-habits as possible. Good figures of the eggs are quoted, and especial reference has been made to those authors whose reports, or papers in periodical literature, treat of the particular specimens in the Collection with which their names are associated.

The birds included in this volume embrace the *Ratitæ* and that portion of the *Carinata* extending in the 'Hand-list' from the *Tinamiformes* to the *Lariformes*. The total number of species is 520 and of specimens 12,156, distributed in the following manner:—

RATITÆ.

	No. of species.	No. of specimens.
Rheiformes	2	16
Struthioniformes	4	15
Casuariiformes	7	32
Dinornithiformes	1	4
Æpyornithiformes	1	4
Apterygiformes	1	2

CARINATÆ.

Tinamiformes	17	109
Galliformes	137	2310
Hemipodii	14	262
Pteroclidiformes	9	243
Columbiformes	87	752
Opisthocomiformes	1	7
Ralliformes	54	1026
Podicipedidiformes	15	313
Colymbiformes	4	124
Sphenisciformes	10	125
Procellariiformes	48	445
Alciformes	16	926
Lariformes	92	5441
	<hr/> 520	<hr/> 12,156

It appears, therefore, that the British Museum Collection contains specimens of the eggs of about one-third of the total number of the living or recently-extinct birds belonging to the above mentioned Orders, as enumerated in the 'Hand-list.'

With few exceptions, the eggs now illustrated have not been figured before. It only remains to add that the measurements of the specimens throughout this Catalogue are invariably in English inches.

The symbols employed in the present volume are the same as those in the 'Catalogue of Birds.' [P.] means "Presented by," [C.] "Collected by," [E.] "Received in exchange."

EUGENE W. OATES.

parasiticus (<i>Linn.</i>)	228

Class A V E S.

Sub-Class **RATITÆ.**

Order R H E I F O R M E S.

Family RHEIDÆ.

Genus **RHEA**, *Lath.*

[*Cf.* Nathusius, *J. f. O.* 1896, p. 257.]

The eggs of the Rheas are elliptical in form, and in some instances biconical. The shell is very strong, smooth and closely pitted with pores. The majority are glossy; a few are entirely without gloss.

Rhea americana (*Linn.*).

Rhea americana, *Thien. Fortpflanz. ges. Vög.* tab. ii. fig. 1 (1845-54); *Selater*, *P. Z. S.* 1863, p. 234; *Hudson*, *P. Z. S.* 1872, p. 535; *Gibson*, *Ibis*, 1885, p. 283; *Claraz*, *P. Z. S.* 1885, p. 324; *Scl. & Huds. Argent. Orn.* ii. p. 216 (1889); *Holland, Ibis*, 1892, p. 214; *Schalow*, *J. f. O.* 1894, p. 12; *Salvadori, Cat. Birds B. M.* xxvii. p. 578 (1895); *Sharpe, Hand-l.* i. p. 1 (1899).

The eggs of the Common Rhea in the Collection vary in colour between parchment-white and pale yellow. They also vary in size very considerably, and it is probable that those of the first year are much smaller than those subsequently laid. Full-sized eggs measure from 5·3 to 6 in length and from 3·55 to 3·95 in breadth. A small specimen collected by Mr. A. H. Holland measures only 3·15 by 2·45.

Lord Lilford [P].

Rhea darwini, Gould.

Rhea darwini, *Thien. Fortpflanz. ges. Vög.* tab. ii. fig. 2 (1845-54); *Hudson, P. Z. S.* 1872, p. 535; *Claraz, P. Z. S.* 1885, p. 324; *Scl. & Huds. Argent. Orn.* ii. p. 219 (1889); *Schalow, J. f. O.* 1894, p. 11; *Salvadori, Cat. Birds B. M.* xxvii. p. 582 (1895); *Lane, Ibis*, 1897, p. 316; *Sharpe, Hand-l.* i. p. 1 (1899).

When fresh, the eggs of Darwin's Rhea are, according to Mr. Hudson, of a deep, rich green colour. Some specimens in the Collection have faded to a parchment-white; others to a pale buff, dull green or yellow. They measure from 5·2 to 5·4 in length, and from 3·4 to 3·7 in breadth.

1. Patagonia.	Gould Coll.

Rhea nana, described by Mr. Lydekker (*Knowledge*, xvii. 1894, p. 265; *Revista del Museo de la Plata*, vi. 1894, p. 103, with fig. of egg; *P. Z. S.* 1894, p. 654; *Salvad. Cat. Birds B. M.* xxvii. p. 578, 1895), is at present known only from an egg. A cast of this is in the British Museum Collection. It is a perfect ellipse in form and measures 3·4 by 2·65. A cast of a somewhat similar egg, measuring 3·65 by 2·7, has been presented to the British Museum by Dr. Berg. It will be noticed that both these examples are larger than the small egg of *R. americana* collected by Mr. Holland, the measurements of which are given above. The validity of *R. nana* as a species, viewed in the light of the small size of its egg, would therefore appear to be doubtful.

Order STRUTHIONIFORMES.**Family STRUTHIONIDÆ.****Genus STRUTHIO, Linn.**

The eggs of the Ostriches are spheroidal in form. The shell is extremely strong, very smooth, and highly glossy.

Four species of Ostriches are known, but their geographical range has not yet been accurately ascertained.

The eggs of *S. camelus* may be recognized by the absence of punctures or pores on the shell, but those of the remaining three species cannot be discriminated one from the other.

Struthio camelus, Linn.

Struthio camelus, *Thien. Fortpflanz. ges. Vög.* tab. iii. (1845-54); *Hardy, Compt. Rend.* xlv. p. 1272 (1858); *Tristram, Ibis*, 1860, p. 72; *Sclater, P. Z. S.* 1863, p. 233; *Nathusius, J. f. O.* 1885, p. 165, taf. 2. fig. 3; *Schalow, J. f. O.* 1894, p. 5; *Salvadori, Cat. Birds B. M.* xxvii. p. 572 (1895); *Sharpe, Hand-l. i.* p. 2 (1899).

The few eggs of the Northern Ostrich in the Collection vary in colour. One is of a parchment-white, and two are of a pale greenish yellow. A fourth is of a dead white, without any gloss. They may be distinguished by their extreme smoothness, and by the absence of those pits or pores which are so characteristic of the eggs of the other species of Ostriches. There are, it is true, a few minute pores, but they can only be detected when the shell is closely scrutinized, not otherwise. Four eggs measure respectively: 6 by 5; 5.7 by 4.75; 6 by 4.9; 6 by 5.

Struthio molybdophanes, Reichen.

Struthio molybdophanes, *Henke, Zeitschr. ges. Orn.* 1884, p. 219, taf. xii.; *Nathusius, J. f. O.* 1885, p. 165, taf. 2. fig. 2; *Schalow, J. f. O.* 1894, p. 7; *Salvadori, Cat. Birds B. M.* xxvii. p. 574 (1895); *Sharpe, Hand-l. i.* p. 2 (1899).

The three eggs of the Somali-land Ostrich in the Collection are of a parchment-white or dull yellowish, plentifully covered with deep pores or pits, which are of a deep purple colour, very distinct, and of a large size. They measure respectively: 5.9 by 4.85; 5.9 by 4.65; 5.9 by 4.8.

- | | |
|-----------------|-----------------|
| 1. Somali-land. | Old Collection. |
| 2. Somali-land. | Purchased. |

Struthio australis, Gurney.

Struthio australis, *Henke, Zeitschr. ges. Orn.* 1884, p. 220, taf. xii.; *Nathusius, J. f. O.* 1885, p. 165, taf. 2. fig. 1, taf. 3. figs. 4-8; *Layard, Birds S. Africa, Sharpe's ed.* p. 791 (1875-84); *Schalow, J. f. O.* 1894, p. 9; *Salvadori, Cat. Birds B. M.* xxvii. p. 575 (1895); *Sharpe, Hand-l. i.* p. 2 (1899).

The eggs of the Cape Ostrich cannot, with certainty, be separated from those of *S. molybdophanes* nor from those of the next species. Judging, however, from the few examples available for examination, the eggs of the present species would appear to have the pores or pits on the shell finer and smaller and of a somewhat paler colour. They vary in size from 5.7 to 6.3 in length, and from 4.8 to 5 in breadth.

Struthio masaicus, O. Neumann.

? *Struthio camelus*, var. *meridionalis*, *Scl. List Vert. An.* 1862, p. 71 *.
Struthio masaicus, *O. Neumann, J. f. O.* 1898, p. 243; *Sharpe, Hand-l.*
 i. p. 2 (1899).

The eggs of the Masai-land Ostrich do not appear to differ from those of *S. molybtophæus*. The pores or pits are equally numerous and of the same deep purple colour, except in one specimen, where these are only slightly darker than the shell itself. The eggs vary in size from 5·6 to 6·1 in length, and from 4·8 to 5 in breadth.

| 1. Kilimanjaro District (<i>H. H. Johnston</i>). | P. L. Selater, Esq. [P.]. |

Order CASUARIIFORMES.

The eggs of the Emus and Cassowaries are typically biconical in form, occasionally elliptical and rarely oval.

The shell is extremely strong, and is covered with a close and intricate network of raised lines and granulations which covers about two-thirds of its surface. The shell itself is dull, but the raised lines and granulations are extremely glossy.

Some specimens laid in confinement are perfectly smooth, and entirely want even traces of the raised lines and granulations.

Mr. E. Hartert informs me that he believes the eggs of all the Cassowaries, when first laid, are of a bright green colour.

Family DROMÆIDÆ.**Genus DROMÆUS, Vieill.*****Dromæus novæ-hollandiæ* (Lath.).**

Casuarus novæ-hollandiæ, *Thien. Fortpflanz. ges. Vög.* tab. i. fig. 2 (1845-54).

Dromæus novæ-hollandiæ, *Sclater, P. Z. S.* 1863, p. 234; *Gould, Handb. Birds Austr.* ii. p. 200 (1865); *Campbell, N. & E. Austr. Birds*, p. 52 (1883); *North, N. & E. Austr. Birds*, p. 292 (1889); *Schalow, J. f. O.* 1894, p. 15; *Salvadori, Cat. Birds B. M.* xxvii. p. 586 (1895); *Sharpe, Hand-l.* i. p. 2 (1899).

The eggs of the Emu present the general appearance of being of a very dark greenish-brown, dark purplish-brown, deep olive-brown or brownish-buff colour. On a close examination, however, it will be observed that the shell itself where visible is of a pale buff or dingy green colour, and that its dark aspect is due entirely to the colour of the raised lines and granulations.

* The Hon. Walter Rothschild informs me that he believes *S. meridionalis* of Selater to be identical with *S. masaicus* of Neumann.

One example in the Collection, laid in confinement, is quite smooth and uniformly of a clear bluish-green colour.

The eggs measure from 4·9 to 6 in length, and from 3·15 to 3·3 in breadth.

Family CASUARIIDÆ.

Genus **CASUARIUS**, *Briss.*

Casuarius casuarius (*Linn.*).

- Casuarius emeu*, *Thien. Fortpflanz. ges. Vög.* p. 2, tab. i. fig. 1 (1845-54).
Casuarius galeatus, *Sclater, P. Z. S.* 1863, p. 234; *Schalow, J. f. O.* 1894, p. 18; *Salvadori, Cat. Birds B. M.* xxvii. p. 592 (1895).
Casuarius beccarii, *Pelzeln, Ibis*, 1881, p. 401.
Casuarius casuarius, *Sharpe, Hand-l.* i. p. 3 (1899).

The sole egg of the Common Cassowary in the Collection is perfectly smooth, fairly glossy, and of a rather bright green colour. The shell is a good deal disintegrated towards the larger end, and portions of an inner shell, of a pale yellowish-green colour, are visible. This specimen was laid in captivity, and is probably abnormal. It measures 5·7 by 3·35.

Von Pelzeln (*l. c.*) describes an egg of this bird as being "pale olive-green, with tubercles of a vivid green colour equally distributed over the whole surface."

- | | |
|---|---------------------|
| 1. Laid in confinement (Zool. Gardens, London). | Salvin-Godman Coll. |
|---|---------------------|

Casuarius australis, *Wall.*

- Casuarius australis*, *Gould, Handb. Birds Austr.* ii. p. 206 (1865); *North, N. & E. Austr. Birds*, p. 294, pl. xv. (1889); *Schalow, J. f. O.* 1894, p. 24; *Salvadori, Cat. Birds B. M.* xxvii. p. 594 (1895); *Sharpe, Hand-l.* i. p. 3 (1899).

The shell of the egg of the Australian Cassowary is of a buff colour. In two of the specimens in the Collection, the reticulations are of a slightly darker shade of buff than the shell; in two others,

they are pale green ; and in a fifth, very dark green. They measure from 5·1 to 5·65 in length, and from 3·3 to 3·6 in breadth.

- | | |
|---|---------------------|
| 2. Of uncertain origin. | Old Collection. |
| 1. Northern Queensland. | Old Collection. |
| 2. Rockingham Bay (<i>Cockerell</i>). | Salvin-Godman Coll. |

Casuarus beccarii, *Scl.*

Casuarus beccarii, *Salvad. Cat. Birds B. M.* xxvii. p. 596 (1895) ; *Sharpe, Hand-l.* i. p. 3 (1899).

The sole egg of Beccari's Cassowary in the Collection is bluntly biconical. It is of a buff colour, reticulated with dull green. The reticulations and the visible portions of the real shell occupy about the same space. It measures 5·5 by 3·85.

Casuarus bennetti, *Gould*.

Casuarus bennetti, *J. E. Gray*, *P. Z. S.* 1858, p. 271, *Aves*, pl. cxliv.; *Bartlett*, *P. Z. S.* 1860, p. 205, *Aves*, pl. clxii.; *Gould*, *Handb. Birds Austr.* ii. p. 561 (1865); *Schalow*, *J. f. O.* 1894, p. 20; *Salvadori*, *Cat. Birds B. M.* xxvii. p. 601 (1895); *Sharpe*, *Hand-l.* i. p. 4 (1899).

The shell of the eggs of Bennett's Cassowary is of a pale buff or grey colour. The raised lines and granulations on the shell vary in tint. In one example they are of a pale dull greenish; in another they are extremely coarse, prominent, and of a greenish-brown colour. In two others the lines are very feebly developed and they are pale greenish-buff. Four eggs measure respectively: 5.55 by 3.5; 5.05 by 3.4; 5.75 by 3.55; 5.4 by 3.55.

Order DINORNITHIFORMES.

Family DINORNITHIDÆ.

Genus DINORNIS, *Owen*.

Dinornis, *Lydekker*, *Cat. Fossil Birds B. M.* pp. 222, 349 (1891); *Sharpe*, *Hand-l.* i. p. 4 (1899).

The eggs of the extinct Moas of New Zealand are found in caves and in the burial-places of the Maoris. The specimens contained in the National Collection* are imperfect, but the fragments of three have been restored in plaster, the contour of each being determined by the curvature of the fractured pieces. As thus restored, the eggs are nearly perfect ellipses, and three specimens measure respectively: 7.25 by 6; 7.75 by 5.25; 8.1 by 5.9.

The shell is strong, being about one-twelfth of an inch in thickness. In colour the existing remains are of a pale grey. Owen thus describes the shell:—"The shell in *Dinornis* is not only absolutely thinner, but relatively much thinner than in the Ostrich, and, *à fortiori*, than in the *Æpyornis*. The air-pores also have a different form, being linear, not rounded; and the external surface is smoother. In the smoothness and thinness of the shell, the egg of *Dinornis* resembles that of *Apteryx*."

* These are exhibited in the Geological Galleries.

The structure of the shell has been well investigated by W. v. Nathusius, and the results published in the 'Zeitschrift für wissenschaftliche Zoologie,' vol. xxi. p. 330, pls. xxv. & xxvi. (1871).

Sir Richard Owen has figured two eggs of these birds in his 'Memoirs on the Extinct Wingless Birds of New Zealand,' p. 317 (1879). Plate cxv. represents an example which he assigns to *D. crassus*: this is in the B.M. Collection, bearing the registered number A. 222. Plate cxvii. represents an egg which is referred to *D. ingens*.

Order ÆPYORNITHIFORMES.

Family ÆPYORNITHIDÆ.

Genus ÆPYORNIS, *Is. Geoff.*

Æpyornis, *Lydekker, Cat. Fossil Birds B. M.* pp. 213, 214 (1891); *Sharpe, Hand-l.* i. p. 6 (1899).

The eggs of *Æpyornis* are found in recent alluvial deposits, near the surface, in the south of Madagascar, especially in the neighbourhood of Cape St. Marie. They are in an excellent state of preservation, and usually quite intact.

W. v. Nathusius in the 'Zeitschrift für wissenschaftliche Zoologie,' vol. xxi. p. 330, pls. xxv. & xxvi., has fully dealt with the structure of the shell of the egg of *Æpyornis*.

Professor G. Capellini has written an elaborate memoir on the egg in the 'Memorie della R. Accademia delle Scienze dell' Istituto di Bologna,' series iv. vol. x. p. 16 (1889).

Mr. G. Dawson Rowley has published an interesting essay on the egg of *Æpyornis* in the 'Proceedings' of the Zoological Society of London for 1867, p. 892.

Other papers on the same subject will be found fully noticed in Prof. Capellini's memoir above mentioned.

The shell is about one-tenth of an inch in thickness. Portions of its surface are generally extremely rough, resembling the texture of a coarse file, while other portions have been worn quite smooth, like the shell of an Ostrich's egg. The eggs are of a pale yellowish or buff colour. In shape they are true ellipses.

The specimens in the British Museum Collection are probably all referable to *A. maximus*. No. 41847 measures 13·1 by 9·5; it is fractured. No. 41848 and an egg without number, both intact and perfect in all respects, measure respectively: 11 by 8·25 and 11·25 by 8·25. A cast, No. A. 83, the original of which is preserved in the Paris Museum, measures 12·25 by 9·25.

Order APTERYGIFORMES.

Family APTERYGIDÆ.

Genus **APTERYX**, *Shaw*.

Apteryx mantelli, *Bartl.*

Apteryx mantelli, *Sclater*, *P. Z. S.* 1859, p. 350; 1860, p. 194; 1863, p. 234; *Salvadori*, *Cat. Birds B. M.* xxvii. p. 607 (1895); *Sharpe*, *Hand-l.* i. p. 7 (1899).

Apteryx bulleri, *Buller*, *Birds New Zeal.* 2nd ed. ii. p. 308 (1888).

The eggs of Mantell's *Apteryx* in the Collection are of an elongated elliptical form, the two ends being closely alike. The shell is strong, smooth and compact, but exhibits no gloss. They are of a dull white or a very pale yellowish colour.

They are enormously large in proportion to the size of the bird. The two examples in the Collection measure respectively: 4·75 by 3·02; 4·7 by 2·9.

* These are exhibited in the Geological Galleries.

† This is exhibited in the Zoological Galleries, as is also the cast above mentioned.

Sub-Class **CARINATÆ.**Order **TINAMIFORMES.**

The eggs of the Tinamous have a firm and compact shell and are extremely smooth and glossy. Of so beautiful a texture are they, that the shell may be compared to polished metal or the finest glazed porcelain. The colour varies in the different genera, but the eggs of the birds of the same genus are generally alike.

The shape also varies. Some examples are almost spherical; others are elliptical; and others again, but quite a minority, are biconical or oval.

Family **TINAMIDÆ.**Sub-Family **TINAMINÆ.**Genus **TINAMUS**, *Hermann.*

The eggs of the Tinamous of this genus are spheroidal and of a blue colour.

Tinamus robustus, *Scl.*

(Plate I. fig. 1.)

Tinamus robustus, *Salvin, Ibis*, 1861, p. 355; *Salvadori, Cat. Birds B. M.* xxvii. p. 500 (1895); *Sharpe, Hand-l. i.* p. 8 (1899).

The eggs of the Great Mexican Tinamou vary from 2.25 to 2.35 in length, and from 1.87 to 2 in breadth.

- | | |

| 1. Brazil (<i>Brandt</i>). | Old Collection. |
|------------------------------|-----------------|

Tinamus ruficeps, *Scl. & Salv.*

Tinamus ruficeps, *Scl. & Salv. P. Z. S.* 1879, p. 548; *Salvadori, Cat. Birds B. M.* xxvii. p. 506 (1895); *Sharpe, Hand-l.* i. p. 8 (1899).

The eggs of the Rufous-crowned Tinamou vary from 2·15 to 2·35 in length, and from 1·72 to 1·95 in breadth.

6. Remedios, Antioquia, U.S. of Colombia (*T. K. Salmon*). Salvin-Godman Coll.

Genus **NOTHOCERCUS**, *Bp.*

The eggs of the Tinamous of this genus are of a darker blue than those of the species of *Tinamus*. In shape they are either true ellipses, or ovals with one end very slightly compressed.

Nothocercus frantzii (*Lawr.*).

Nothocercus frantzii, *Salvadori, Cat. Birds B. M.* xxvii. p. 512 (1895); *Sharpe, Hand-l.* i. p. 9 (1899).

The two eggs of Frantz's Tinamou in the Collection measure respectively: 3 by 2·05; 3·1 by 2·05.

2. Of uncertain origin. Old Collection.

Nothocercus intercedens, *Salvad.*

Nothocercus bonapartii, *Scl. & Salv. P. Z. S.* 1879, p. 548.

Nothocercus intercedens, *Salvadori, Cat. Birds B. M.* xxvii. p. 513 (1895); *Sharpe, Hand-l.* i. p. 9 (1899).

The two eggs of Salvadori's Tinamou in the Collection are smaller and of a darker blue than those of *N. frantzii*. They measure respectively: 2·8 by 2; 2·9 by 2.

2. Frontino, Antioquia, U.S. of Colombia (*T. K. Salmon*). Salvin-Godman Coll.

Genus **CRYPTURUS**, *Illig.*

In this genus the eggs are short regular ellipses, with a tendency to be spheroidal. The colour varies from a pinkish stone-colour to a clay-colour.

Crypturus griseiventris, *Salvad.*

Crypturus griseiventris, *Salvadori, Cat. Birds B. M.* xxvii. p. 521 (1895); *Sharpe, Hand-l.* i. p. 9 (1899).

The single egg of the Grey-bellied Tinamou in the Collection is of a pinkish stone-colour, and measures 1·82 by 1·4.

1. Santarem, R. Amazon (*H. Wickham*). Salvin-Godman Coll.

Crypturus pileatus (Bodd.).

Crypturus sovi, *Thien. Fortpflanz. ges. Vög.* p. 25, tab. v. fig. 9 (1845-54).

Tinamus meserythrus, *Salvin, Ibis*, 1861, p. 356.

Crypturus pileatus, *Scl. & Salv. P. Z. S.* 1879, p. 548; *Salvadori, Cat. Birds B. M.* xxvii. p. 522 (1895); *Sharpe, Hand-l.* i. p. 9 (1899).

The eggs of the Little Tinamou are of a reddish clay-colour; those in the Collection measure respectively: 1·6 by 1·21; 1·64 by 1·3; 1·67 by 1·24.

Genus TINAMOTIS, Vigors.***Tinamotis pentlandi*, Vigors.**

(Plate I. fig. 5.)

Tinamotis pentlandi, *James, New List of Chilean Birds*, p. 14 (1892); *Salvadori, Cat. Birds B. M.* xxvii. p. 568 (1895); *Lane, Ibis*, 1897, p. 316; *Sharpe, Hand-l. i.* p. 12 (1899).

Of the four eggs of Pentland's Tinamou in the Collection, two

* These eggs are certainly those of *C. elegans*, but some mistake has probably been made regarding the locality in which they were collected.

are of a bright green and two of a yellowish-green colour, with numerous white chalky specks. They measure respectively: 2.15 by 1.55; 1.97 by 1.45; 2.22 by 1.5; 2.2 by 1.5.

4. Central Chili (*L. Landbeck*).

Berkeley James Coll.

Order GALLIFORMES.

Sub-Order MEGAPODII.

Family MEGAPODIIDÆ.

The eggs of the Megapodes are usually lengthened and narrow. They are either elliptical or biconical or, occasionally, of a regular oval form.

The shell is thin and brittle, rough to the touch, covered with minute pores and glossless.

The shell itself appears to be always white, but it is almost invariably covered by a thin calcareous film, which, however, is easily removed and is of a coffee-brown, reddish-brown or pink colour.

It is well-known that the Megapodes deposit their eggs in mounds of earth and vegetable matter. During the time that the eggs lie buried in these mounds they undergo considerable changes, and when discovered they seldom exhibit their original colour.

The eggs of the Megapodes are remarkably large when compared with the size of the bird.

Genus MEGAPODIUS, *Q. & G.*

Megapodius nicobariensis, *Blyth*.

Megapodius nicobariensis, *Hume & Marsh. Game Birds Ind.* iii. *App.* pl. ii. (1880); *Hume, Nests & Eggs*, 2nd ed. iii. p. 449 (1890); *Grant, Cat. Birds B. M.* xxii. p. 447 (1893); *Oates, Game Birds Ind.* i. p. 384 (1898); *Sharpe, Hand-l.* i. p. 12 (1899).

The eggs of the Nicobar Megapode when first laid are of a ruddy-pink colour. After being buried, they turn to pale yellowish-brown, buff or stone-colour. The outer film frequently flakes off in spots, specks and large blotches, causing the shell to be mottled with white. The eggs measure from 3 to 3.4 in length, and from 1.9 to 2.25 in breadth.

Megapodius cumingi, Dillw.

Megapodius cumingi, *Dillwyn*, *P. Z. S.* 1851, p. 118; *Whitehead*, *Ibis*, 1888, p. 411; *Grant*, *Cat. Birds B. M.* xxii. p. 449 (1893); *Sharpe*, *Hand-l. i.* p. 12 (1899).

Megapodius dillwini, *Steere*, *List Birds & Mamm. Philip.* p. 25 (1890).

The eggs of Cuming's Megapode are of a ruddy pink or reddish-brown colour, turning to pale brown with incubation; two specimens in the Collection, however, are dull white. They measure from 2·9 to 3·3 in length, and from 1·8 to 2 in breadth.

Sub-Order *CRACES*.Family **CRACIDÆ**.

The eggs of the Curassows are, as a rule, pointed at both ends or biconical. Some, however, are lengthened ellipses and others are spheroidal in shape.

The shell is very coarse and granulated. The eggs of a few species have a slight gloss; those of the majority are glossless.

The colour is dull white, turning to parchment-white or yellowish white with incubation. When the series is fairly extensive, specimens exhibiting all these variations of colour are represented, and therefore it has not been thought necessary to describe the eggs of each species in the Collection in detail.

Little is known or recorded about the eggs of these birds. It will be seen that very many of the specimens in the Museum have been laid in confinement.

Genus **CRAX**, *Linn.***Crax alector**, *Linn.*

Crax alector, *Grant, Cat. Birds B. M.* xxii. p. 475 (1893); *Sharpe, Hand-l.* i. p. 14 (1899).

The eggs of the Crested Curassow measure from 3·3 to 3·7 in length, and from 2·45 to 2·75 in breadth.

The two eggs of the Helmeted Curassow in the Collection measure respectively: 3·5 by 2·6; 3·48 by 2·42.

2. Laid in confinement (Zool. Gardens, London). Gould Coll.

Genus **PENELOPE**, *Merrem*.

Penelope pileata, *Wagler*.

Penelope pileata, *Grant, Cat. Birds B. M.* xxii. p. 500 (1893); *Sharpe, Hand-l.* i. p. 16 (1899).

The egg of the White-headed Penelope in the Collection measures 2·95 by 2·05.

1. Laid in confinement (Zool. Gardens, London). Zool. Society.

Genus **ORTALIS**, *Merrem*.

Ortalis ruficauda (*Jard.*).

Ortalis ruficauda, *Grant, Cat. Birds B. M.* xxii. p. 507 (1893); *Sharpe, Hand-l.* i. p. 17 (1899).

The egg of Jardine's Guan in the Collection measures 2·45 by 1·7.

1. Tobago. Salvin-Godman Coll.

Ortalis albiventris (*Wagl.*).

Ortalis albiventris, *Forbes, Ibis*, 1881, p. 357; *Grant, Cat. Birds B. M.* xxii. p. 508 (1893); *Sharpe, Hand-l.* i. p. 17 (1899).

The dimensions of the egg of the White-bellied Guan in the Collection are 2·3 by 1·55.

1. La Grande, Guatemala, 19th March. Salvin-Godman Coll.

Ortalis macalli, *Baird*.

Ortalis vetula, *var. macalli*, *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 398 (1874).

Ortalis vetula macalli, *Bendire, Life Hist. N. A. Birds*, i. p. 119, pl. iii. fig. 16 (1892).

Ortalis vetula, *pt.*, *Grant, Cat. Birds B. M.* xxii. p. 512 (1893).

Ortalis macalli, *Sharpe, Hand-l.* i. p. 17 (1899).

The egg of the Lesser Grey-headed Guan in the Collection measures 2·3 by 1·59.

1. Texas (*Smiths. Inst.*). Salvin-Godman Coll.

Genus **ABURRIA**, *Reichenb.***Aburria aburri** (*Less.*).

Aburria carunculata, *Scl. & Salv. P. Z. S.* 1879, p. 544.

Aburria aburri, *Grant, Cat. Birds B. M.* xxii. p. 520 (1893); *Sharpe, Hand-l. i.* p. 18 (1899).

The two eggs of the Black Wattled Guan in the Collection measure respectively : 2·8 by 2 ; 2·65 by 1·9.

1. Frontino, Antioquia, U.S. Salvin-Godman Coll.
Colombia (*T. K. Salmon*).
1. Laid in confinement (Zool. Zool. Society.
Gardens, London).

Genus **CHAMÆPETES**, *Wagler.***Chamæpetes goudoti** (*Less.*).

Chamæpetes goudoti, *Scl. & Salv. P. Z. S.* 1879, p. 544; *Grant, Cat. Birds B. M.* xxii. p. 521 (1893); *Sharpe, Hand-l. i.* p. 18 (1899).

The egg of the Rufous-breasted Sickie-winged Guan in the Collection measures 2·8 by 2.

1. Retiro, Antioquia, U.S. Colom- Salvin-Godman Coll.
bia (*T. K. Salmon*).

Sub-Order **PHASIANI**.Family **TETRAONIDÆ**.

The eggs of the Grouse are normally of a true oval form, but occasionally they are elliptical or even pyriform. The shell is smooth with a small amount of gloss, and is generally pitted with very minute pores.

Genus **LAGOPUS**, *Briss.*

The eggs of the True Grouse are cream-coloured, stone-coloured, reddish buff or pale olive, marked with specks, spots and blotches of dark red-brown or chocolate-brown, frequently so dark as to appear black. Some are covered with spots and small blotches; others with well-defined blotches only; and others again with huge confluent patches which almost entirely conceal the ground-colour. An occasional example may be met with which is unmarked and of a whitish colour.

The eggs of the different species of True Grouse cannot be separated with any certainty either by size or colour.

Lagopus scoticus (Lath.).

Tetrao albus, *Thien. Fortpflanz. ges. Vög.* p. 39, tab. viii. figs. 6 a, b, c, d (1845-54).

Lagopus scoticus, *Baedeker, Eier Eur. Vög.* tab. 46. fig. 5 (1855-63); *Dresser, Birds Eur.* vii. p. 165 (1873); *Grant, Cat. Birds B. M.* xxii. p. 35 (1893); *Sharpe, Hand-l.* i. p. 18 (1899).

Tetrao scoticus, *Hewitson, Eggs of Brit. Birds*, i. p. 279, pl. lxx. figs. i, ii (1856); *Seebohm, Brit. Birds*, ii. p. 428, pl. 20 (1884); *id. Eggs of Brit. Birds*, p. 272, pl. 59. figs. 10, 12 (1896).

The eggs of the Red Grouse measure from 1·6 to 1·9 in length, and from 1·18 to 1·28 in breadth.

Lyrurus tetrix, *Baedeker, Eier Eur. Vög.* tab. 29. fig. 3 (1855-63); *Grant, Cat. Birds B. M.* xxii. p. 53 (1893); *Sharpe, Hand-l.* i. p. 19 (1899).

The eggs of the Black Grouse are of various shades of cream-colour, pale yellow and reddish buff, marked with specks, spots and blotches of reddish brown. Some are marked only with small spots; others with both spots and blotches, many of the latter being of considerable size. Occasionally a specimen has a decidedly greenish tinge. They measure from 1·9 to 2·1 in length, and from 1·35 to 1·45 in breadth.

Lyrurus mlokosiewiczzi (Tacz.).

(Plate II. fig. 3.)

Tetrao mlokosiewiczzi, *Dresser, Birds Eur.* vii. p. 219 (1876).

Lyrurus mlokosiewiczzi, *Grant, Cat. Birds B. M.* xxii. p. 58 (1893); *Sharpe, Hand-l. i.* p. 19 (1899).

The eggs of the Caucasian Black Grouse are cream-coloured, speckled and spotted with very pale yellowish brown. Two specimens measure respectively: 1·95 by 1·35; 2 by 1·35.

2. Caucasus. Count Branicki [P.].

Genus **TETRAO**, *Linn.*

Tetrao urogallus, *Linn.*

Tetrao urogallus, *Thien. Fortpflanz. ges. Vög.* p. 40, tab. ix. figs. 1 a, b (1845-54); *Baedeker, Eier Eur. Vög.* tab. 29. fig. 2 (1855-63); *Dresser, Birds Eur.* vii. p. 223 (1873); *Seebohm, Brit. Birds*, ii. p. 440, pl. 21 (1884); *Grant, Cat. Birds B. M.* xxii. p. 60 (1893); *Seebohm, Eggs of Brit. Birds*, p. 274, pl. 59. fig. 11 (1896); *Sharpe, Hand-l. i.* p. 19 (1899).

The eggs of the Capercaillie are broad ovals. The shell is slightly rough and possesses only a small amount of gloss. They are very uniformly of a pale reddish buff, marked with specks, spots and small blotches of reddish brown. In some, the markings consist only of small specks very closely set over the shell; in others, they consist of both specks and spots; in others, again, the markings consist of spots and a number of small blotches of irregular shape. They measure from 2 to 2·4 in length, and from 1·6 to 1·7 in breadth.

Pediceetes columbianus, *Grant, Cat. Birds B. M.* xxii. p. 83 (1893).
Pediceetes columbianus, *Sharpe, Hand-l.* i. p. 20 (1899).

The three eggs of the Columbian Sharp-tailed Grouse in the Collection are of a dark buff-colour, very minutely speckled with dark brown over the whole shell. They can be matched very closely by some of the eggs of *P. phasianellus*. They measure respectively: 1·65 by 1·2; 1·6 by 1·2; 1·65 by 1·18.

Genus BONASA, Steph.

Bonasa umbellus (Linn.).

- Tetrao umbellus*, *Thien. Fortpflanz. ges. Vög.* p. 45, tab. ix. fig. 4 (1845–54).
Bonasia umbellus, *Baedecker, Eier Eur. Vög.* tab. 77. fig. 5 (1855–63).
Bonasa umbellus, *Ross, Nat. Hist. Rev.* 1862, p. 283; *Bendire, Life Hist. N. A. Birds*, i. p. 59, pl. ii. fig. 1 (1892); *Grant, Cat. Birds B. M.* xxii. p. 85 (1893); *Sharpe, Hand-l.* i. p. 21 (1899).
Bonasa umbellus, var. *umbellus*, *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 448 (1874).
Bonasa umbellus, var. *umbelloides* *, *id. t. c.* p. 453.
Bonasa umbellus, var. *sabini*, *id. t. c.* p. 454.
Bonasa umbellus togata, *Bendire, Life Hist. N. A. Birds*, i. p. 64, pl. ii. fig. 2.
Bonasa umbellus umbelloides, *id. t. c.* p. 67, pl. ii. fig. 3.
Bonasa umbellus sabini, *id. t. c.* p. 68, pl. ii. fig. 4.
Bonasa togata, *Sharpe, Hand-l.* i. p. 21 (1899).
Bonasa umbelloides, *id. t. c.* p. 21.
Bonasa sabinei, *id. t. c.* p. 21.

* I follow Mr. Grant in uniting all the races of this species. Dr. Sharpe keeps them separate, but quotes Professor Coues to the effect that *B. togata* cannot be upheld, though *B. umbelloides* and *B. sabinei* are fairly recognizable.

The eggs of the different races of the Ruffed Grouse are extremely variable in colour. The majority are of various shades of cream-colour: some are perfectly unmarked; others show a few small spots of pale rufous; a few are rather profusely spotted with pale reddish brown, and some are marked with a few pale washed-out purple blotches. Three specimens in the Collection are of a buff-colour, minutely but thickly speckled with dark rufous.

One specimen is unusually large and measures 1·8 by 1·35. Others of normal size measure from 1·45 to 1·7 in length, and from 1·1 to 1·3 in breadth.

Family PHASIANIDÆ.

The eggs of the Pheasants and Partridges vary greatly in form and colour. Typically they resemble in shape the egg of the common domestic Fowl, but in some species they are pyriform, and in others of a spheroidal shape. The shell, as a rule, possesses a considerable amount of gloss and is covered with pores or pits which vary in depth and distinctness in proportion to the size of the eggs. When these are small, the pores are nearly obsolete, when large they are deep and conspicuous.

Genus **TETRAOGALLUS**, *J. E. Gray*.

The eggs of the species of Snow-Cocks bear a very close resemblance to each other. They are of a regular oval shape and the shell is moderately fine and glossy. The ground varies from buff to pale olive-brown or stone-colour and this is speckled and spotted, and occasionally blotched, with pale chestnut, purple and umber-brown.

Tetraogallus tibetanus, *Gould*,

(Plate II. fig. 7.)

Tetraogallus tibetanus, *Hume & Marsh. Game Birds Ind.* i. p. 275 (1879); *Grant, Cat. Birds B. M.* xxii. p. 104 (1893); *Oates, Game Birds Ind.* i. p. 205 (1898); *Sharpe, Hand-l.* i. p. 22 (1899).

The single egg of the Tibetan Snow-Cock in the Collection measures 2·4 by 1·7.

1. 3 miles south of the Pangour Tso, Hume Coll.
Tibet.

Tetraogallus altaicus (*Gebler*).

(Plate II. fig. 8.)

Tetraogallus altaicus, *Grant, Cat. Birds B. M.* xxii. p. 110 (1893); *Sharpe, Hand-l.* i. p. 22 (1899).

The two eggs of the Altai Snow-Cock in the Collection are of precisely the same size and measure 2·65 by 1·85.

2. Altai Mountains, 3rd May (*C. A.* Seebohm Coll.
Tancré).

Tetraogallus himalayensis (*J. E. Gray*).

Tetraogallus himalayensis, *Hume & Marsh. Game Birds Ind.* i. p. 267 (1879), iii. App. pl. iii. (1880); *Biddulph, Ibis*, 1881, p. 93; *Scully, Ibis*, 1881, p. 586; *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 426 (1890); *Grant, Cat. Birds B. M.* xxii. p. 106 (1893); *Oates, Game Birds Ind.* i. p. 201 (1898); *Sharpe, Hand-l.* i. p. 22 (1899).

One egg of the Himalayan Snow-Cock in the Collection is abnormal, the ground being cream-coloured, spotted with pale purple.

The eggs vary from 2·5 to 2·8 in length, and from 1·75 to 2 in breadth.

Caccabis chukor, *Hume & Marsh. Game Birds Ind.* ii. p. 33 (1879); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 431 (1890).

Eggs of the Chukor Partridge taken in Greece are frequently unmarked. Those from the Grecian Archipelago and Cyprus are for the most part slightly spotted, and there are only two specimens in the Collection from these parts which may be said to be boldly marked.

More to the eastward the eggs of this species are found to be in all cases spotted and frequently blotched with purplish, reddish or yellowish brown, and with grey and pink. They measure from 1·55 to 1·9 in length, and from 1·15 to 1·3 in breadth.

The eggs of the Barbary Red-legged Partridge are more variable in colour than those of any other species of the genus.

Some are very minutely and closely spotted with rufous, and others are very boldly blotched and smudged with the same. Some examples from Tunis are marked with greyish brown, without a trace of rufous. The markings on a few specimens are so minute that they might easily pass unobserved. The eggs measure from 1.55 to 1.75 in length, and from 1.15 to 1.25 in breadth.

Genus **AMMOPERDIX**, *Gould*.

The eggs of the Rock-Partridges vary in shape from a broad oval to pyriform, but sometimes they are narrow and elongated. The shell is fine and smooth and usually possesses a considerable amount of gloss.

In colour the eggs vary from white to creamy-white or pale buff. Some few specimens are speckled with grey and reddish brown, but the majority are quite plain.

Ammoperdix bonhami (*Fraser*).

(Plate II. figs. 1 & 2.)

Ammoperdix bonhami, *Hume & Marsh. Game Birds Ind.* ii. p. 45 (1879); *Dresser, Birds Eur.* vii. p. 117 (1880); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 433 (1890); *Grant, Cat. Birds B. M.* xxii. p. 123 (1893); *Oates, Game Birds Ind.* i. p. 185 (1898); *Sharpe, Hand-l.* i. p. 23 (1899).

The eggs of the Secsee Partridge, or Bonham's Rock-Partridge, measure from 1.3 to 1.5 in length, and from 1 to 1.1 in breadth.

Genus FRANCOLINUS, *Stephens*.

The eggs of the Francolins are of two types as regards their form. So far as can be judged from the specimens in the Collection, it appears that those of the African species are of a very regular oval shape, whereas those of the European and Asiatic species are pyriform, one end being usually very broad and rounded, and the other abruptly pointed. The shell is glossy, and in some cases highly so.

Francolinus francolinus (*Linn.*).

Francolinus vulgaris, *Baedeker, Eier Eur. Vög.* tab. 21. fig. 1 (1855-63); *Dresser, Birds Eur.* vii. p. 123 (1876); *Hume & Marsh. Game Birds Ind.* ii. p. 9 (1879); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 428 (1890); *Sharpe, Ibis*, 1891, p. 111.

Perdix francolinus, *Bree, Birds Eur.* iii. p. 236, pl. — (1867).

Francolinus francolinus, *Grant, Cat. Birds B. M.* xxii. p. 132 (1893); *Oates, Game Birds Ind.* i. p. 156 (1898); *Sharpe, Hand-l. i.* p. 23 (1899).

The eggs of the Common or Black Francolin vary considerably in colour, being of an olive-brown, drab, buff or stone-colour or even of a very pale green. They are quite plain, but some examples exhibit white spots, as if the outer layer of the shell had become disintegrated*. The eggs measure from 1·35 to 1·8 in length, and from 1·15 to 1·4 in breadth.

Francolinus gularis, *Grant, Cat. Birds B. M.* xxii. p. 158 (1893); *Sharpe, Hand-l.* i. p. 24 (1899).

The eggs of the Indian Swamp-Partridge are of a pale rufous

cream-colour, with numerous purplish specks at the larger end. They measure from 1·44 to 1·5 in length, and from 1·16 to 1·23 in breadth.

4. Khoolna, Jessore, 13th April (*H. J. Rainey*). Hume Coll.

Francolinus bicalcaratus (*Linn.*).

(Plate III. fig. 9.)

Francolinus bicalcaratus, *Grant, Cat. Birds B. M.* xxii. p. 160 (1893); *Dresser, Birds Eur.* ix. (*Suppl.*) p. 325 (1896); *Sharpe, Hand-l.* i. p. 24 (1899).

The eggs of the Double-spurred Francolin in the Collection are of a plain reddish-buff colour. Two specimens measure respectively: 1·75 by 1·3; 1·85 by 1·3.

2. Laid in confinement (Zool. Gardens, London). Zool. Society.

Francolinus sharpei, *Ogilvie Grant*.

(Plate III. fig. 8.)

Francolinus sharpii, *Grant, Cat. Birds B. M.* xxii. p. 164 (1893); *Sharpe, Hand-l.* i. p. 25 (1899).

The two eggs of Sharpe's Francolin in the Collection are of a dark cream-colour, and measure respectively: 1·75 by 1·3; 1·7 by 1·25.

1. Laid in confinement (Zool. Gardens, London). Zool. Society.
1. Laid in confinement (Zool. Gardens, London, 19th Dec.). Zool. Society.

Francolinus capensis (*Gm.*).

Perdix clamator, *Thien. Fortpflanz. ges. Vög.* p. 32, tab. vii. fig. 9 (1845-54).

Francolinus clamator, *Sharpe, ed. Layard, Birds S. Africa*, p. 591 (1875-84).

Francolinus capensis, *Grant, Cat. Birds B. M.* xxii. p. 165 (1893); *Sharpe, Hand-l.* i. p. 25 (1899).

The eggs of the Cape Francolin are usually of a brownish cream-colour or pale buff, occasionally with a decided purplish tinge. Those laid in the Zoological Gardens, recorded below, are of a pale purplish grey. Some specimens are said to be spotted. They measure from 1·8 to 1·95 in length, and from 1·4 to 1·5 in breadth.

Coturnix communis, *Baedeker, Eier Eur. Vög.* tab. 21. fig. 6 (1855-63); *Saunders, Ibis*, 1871, p. 224; *Dresser, Birds Eur.* vii. p. 143 (1878); *Hume & Marsh. Game Birds Ind.* ii. p. 133 (1879); *Seebohm, Brit. Birds*, ii. p. 462, pl. 20 (1884); *Oates ed. Hume, Nests & Eggs Ind.* B. iii. p. 443 (1890); *Seebohm, Eggs of Brit. Birds*, p. 277, pl. 59. figs. 1, 3 (1896).

Coturnix vulgaris, *Hewitson, Eggs of Brit. Birds*, i. p. 284, pl. lxxii. (1856).

Turnix coturnix, *Salvin, Ibis*, 1859, p. 353.

Coturnix coturnix, *Grant, Cat. Birds B. M.* xxii. p. 231 (1893); *Oates, Game Birds Ind.* i. p. 80 (1898); *Sharpe, Hand-l.* i. p. 31 (1899).

The eggs of the Common Quail are of various shades of creamy white, yellowish buff, buff and greenish yellow, marked with deep olive-brown, reddish brown, and blackish brown. In some the markings consist of small specks and irregularly-shaped spots, with a few small blotches. In others the markings are mostly blotches of considerable size, frequently confluent, and covering quite half the surface of the shell. Numerous specimens measure from 1·1 to 1·2 in length, and from ·85 to ·95 in breadth.

Coturnix coromandelica (*Gm.*).

- Coturnix coromandelica*, Hume & Marsh. *Game Birds Ind.* ii. p. 151 (1879); iii. App. pl. iv. (1880); Oates ed. Hume, *Nests & Eggs Ind.* B. iii. p. 444 (1890); Grant, *Cat. Birds B. M.* xxii. p. 241 (1893); Oates, *Game Birds Ind.* i. p. 90 (1898); Sharpe, *Hand-l.* i. p. 31 (1899).

The eggs of the Black-breasted or Rain Quail vary excessively, the ground-colour ranging from yellowish white to reddish buff. The markings are black, purplish, olive, reddish brown or rich brown, and consist of specks, spots and blotches. Some examples are thickly covered with fine specks only: others are speckled and also blotched: and others again are blotched and marbled. They measure from 1 to 1.25 in length, and from .8 to .9 in breadth.

Coturnix pectoralis, Gould.

Coturnix pectoralis, *Gould, Handb. Birds Austr.* ii. p. 190 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 51 (1883); *North, Nests & Eggs Austr. Birds*, p. 289, pl. xvi. fig. 10 (1889); *Grant, Cat. Birds B. M.* xxii. p. 244 (1893); *Sharpe, Hand-l.* i. p. 31 (1899).

The eggs of the Australian Quail contained in the Collection can be matched by eggs of *C. coturnix* with regard to coloration, but they are of rather larger size. They are of two types: in one they are largely blotched, in the other they are thickly speckled and spotted.

Coturnix novæ zealandiæ (Q. & G.).

(Plate IV. fig. 6.)

Coturnix novæ-zealandiæ, *Potts, Tr. N. Z. Inst.* ii. p. 66 (1869); iii. p. 92 (1870); v. p. 185 (1872); *Buller, Birds New Zeal.* 2nd ed. i. p. 225 (1888); *Grant, Cat. Birds B. M.* xxii. p. 245 (1893); *Sharpe, Hand-l.* i. p. 31 (1899).

The eggs of the extinct New Zealand Quail are of a creamy-buff colour, marked with extremely dark chocolate-brown or blackish brown. Two examples in the Collection are marked with bold blotches combined with many specks and spots; two others are marked with confluent blotches and spots, covering nearly the entire surface of the shell. The four specimens measure respectively: 1.3 by 1; 1.35 by 1; 1.4 by 1; 1.3 by 1.

Genus *SYNÆCUS*, Gould.

Synæcus australis (Temm.).

Perdix australis, *Thien. Fortypflanzen. ges. Vög.* p. 35, tab. viii. fig. 3 a, b (1845-54).

Synoicus australis, *Macgillivray, Voy. 'Rattlesnake,'* ii. p. 358 (1852);

Gould, Handb. B. Austr. ii. p. 193 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 51 (1883); *North, Nests & Eggs Austr. Birds*, p. 289 (1889).

Synæcus australis, *Grant, Cat. Birds B. M.* xxii. p. 247 (1893); *Sharpe, Hand-l.* i. p. 31 (1899).

The eggs of the Australian Swamp-Quail vary much in size and colour, and no two clutches resemble each other. They are normally broad ovals, with one end much pointed. Some are white, occasionally marked with a few very tiny dark scattered dots; others are creamy white, some thickly, some sparingly, freckled and occasionally blotched with pale grey; others again are a dull pale stone-colour or greenish white, much speckled with rufous or brown. A specimen from Tasmania is of this latter character, being of a pale stone-colour with very numerous dots all over the shell, but it is fully twice the size of any other egg of this species in the Collection. The following are the average dimensions of the eggs of this bird from various localities :

Port Essington	1·15 by ·9
Moreton Bay	1·3 by ·95
Tasmania	1·45 by 1·05.

6. Moreton Bay.	Gould Coll.
1. Tasmania.	Gould Coll.

Synæcus raalteni (*Müll. & Schleg.*).

(Plate IV. fig. 1.)

Synæcus raalteni, *Grant, Cat. Birds B. M.* xxii. p. 249 (1893); *Sharpe, Hand-l.* i. p. 31 (1899).

The eggs of Raalten's Swamp-Quail are broad ovals, pointed at one end and approaching the pyriform. The ground-colour is of a pale cream- or stone-colour, and this is thickly sprinkled over with minute pale rufous dots and specks, very evenly distributed over the shell. The four specimens in the Collection measure respectively: 1·08 by ·9; 1·1 by ·89; 1·07 by ·89; 1·1 by ·87.

4. Alor Island, Moluccas, 18th April. A. H. Everett, Esq. [P.].

Genus **EXCALFACTORIA**, *Bp.*

Excalfactoria chinensis (*Linn.*).

Excalfactoria chinensis, *Swinhoe, Ibis*, 1863, p. 398; *Hume & Marsh, Game Birds Ind.* ii. p. 161 (1879); iii. App. pl. iii. (1880); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 448 (1890); *Grant, Cat. Birds B. M.* xxii. p. 250 (1893); *Oates, Game Birds Ind.* i. p. 95 (1898); *Sharpe, Hand-l.* i. p. 32 (1899).

The eggs of the Blue-breasted, or Painted, Quail are broad ovals, generally much pointed at one end, and they vary in colour from pale buff to brownish olive, spotted with very minute dots of reddish brown and purple. Some appear to be unspotted, but on close examination they will be found to be covered with extremely minute specks. The ground-colour of one specimen is pale blue. They measure from .95 to 1.05 in length, and from .7 to .8 in breadth.

Excalfactoria lineata (*Scop.*).

(Plate IV. fig. 2.)

Excalfactoria australis, *Gould, Handb. Birds Austr.* ii. p. 197 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 51 (1883); *North, Nests & Eggs Austr. Birds*, p. 291 (1889).

Excalfactoria chinensis, *Sharpe, P. Z. S.* 1879, p. 350.

Excalfactoria lineata, *Grant, Cat. Birds B. M.* xxii. p. 253 (1893); *Sharpe, Hand-l.* i. p. 32 (1899).

The eggs of the Island Painted Quail resemble those of *E. chinensis* in texture, gloss, shape and size, but differ markedly from them in colour. They are of a light green, pale brown, stone-colour or olive-buff, thickly spotted all over with blackish brown or dark chocolate-brown, the spots being clear and distinct and of small size.

Bambusicola sonorivox, *Swinhoe, Ibis*, 1863, p. 399; *Grant, Cat. Birds B. M.* xxii. p. 259 (1893); *Sharpe, Hand-l. i.* p. 32 (1899).

The eggs of the Formosan Bamboo-Partridge are of various shades of cream-colour. Some are plain, but the majority are freckled with very minute rufous dots which are sometimes evenly spread over the shell and sometimes collected at one end. Some specimens are much stained with yellow. They measure from 1·25 to 1·45 in length, and from 1 to 1·1 in breadth.

Genus TRAGOPAN, *Cuvier.*

Tragopan satyra (Linn.).

Satyra (Tragopan) sahrpus, *Thien. Fortpflanz. ges. Vög.* p. 52, tab. xii. fig. 4 (1845-54).

Cerionis satyra, *Hume & Marsh. Game Birds Ind.* i. p. 137 (1879); *Sclater, P. Z. S.* 1879, p. 117, pl. viii. fig. 4; *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 409 (1890).

Tragopan satyra, *Grant, Cat. Birds B. M.* xxii. p. 271 (1893); *Oates, Game Birds Ind.* i. p. 241 (1898); *Sharpe, Hand-l.* i. p. 33 (1899).

The sole egg of the Crimson Horned Pheasant in the Collection is of a regular oval shape, without gloss and of a dull white, closely freckled all over with pale lilac. It measures 2·4 by 1·8. Several

examples measured by Mr. Hume, which are no longer in his Collection, varied from 2·54 to 2·62 in length, and from 1·8 to 1·84 in breadth.

1. Laid in confinement (Zool. Gardens, London). Zool. Society.

Tragopan melanocephalus (*J. E. Gray*).

Cerionis melanocephalus, *Hume & Marsh. Game Birds Ind.* iii., App. pl. iii. (1880); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 410 (1890).

Tragopan melanocephalus, *Grant, Cat. Birds B. M.* xxii. p. 273 (1893); *Oates, Game Birds Ind.* i. p. 245 (1898); *Sharpe, Hand-l.* i. p. 33 (1899).

The eggs of the Western Horned Pheasant are elongated ovals, without gloss and of a dull yellowish buff, minutely spotted all over with yellowish brown. They measure from 2·4 to 2·55 in length, and from 1·68 to 1·72 in breadth.

4. Hazara, N.W. India, 25th May (Captain Loutour). Hume Coll.

Tragopan temmincki (*J. E. Gray*).

Cerionis temmincki, *Slater, P. Z. S.* 1879, p. 117, pl. viii. fig. 3.

Tragopan temmincki, *Grant, Cat. Birds B. M.* xxii. p. 275 (1890); *Oates, Game Birds Ind.* i. p. 251 (1898); *Sharpe, Hand-l.* i. p. 33 (1899).

The eggs of Temminck's Horned Pheasant vary from a narrow to a broad oval shape and have very little gloss. Those of the clutch recorded below from China, six in number, are of a pinkish cream-colour, very closely speckled all over with dark reddish brown; those laid in the Zoological Gardens are of a rufous-buff colour, thickly speckled with dull rufous-brown. They measure from 2 to 2·25 in length, and from 1·45 to 1·65 in breadth.

4. Laid in confinement (Zool. Gardens, London). Zool. Society.
6. Ta-tsien-lu, W. China (*A. E. Pratt*). Seebohm Coll.

Tragopan blythi (*Jerd.*).

(Plate V. fig. 5.)

Cerionis blythi, *Hume & Marsh. Game Birds Ind.* i. p. 151 (1879); *Slater, P. Z. S.* 1884, p. 477.

Tragopan blythi, *Grant, Cat. Birds B. M.* xxii. p. 276 (1893); *Oates, Game Birds Ind.* i. p. 254 (1898); *Sharpe, Hand-l.* i. p. 33 (1899).

The sole egg of the Grey-bellied, or Blyth's, Horned Pheasant in the Collection closely resembles those eggs of *T. temmincki* which were laid in the Gardens of the Zoological Society and are described above, but is rather paler. It was laid in confinement, and measures 2·4 by 1·75.

1. Sadiya, Assam, July (*Major W. Brydon*). P. L. Slater, Esq. [P.].

Genus **LOPHOPHORUS**, *Temm.***Lophophorus impeyanus** (*Lath.*).

Satyra impeyana, *Thien. Fortpflanz. ges. Vög.* p. 52, tab. xii. fig. 3 (1845-54).

Lophophorus impeyanus, *Mitchell, P. Z. S.* 1858, p. 544, *Aves*, pl. cxlix. fig. 5; *Hume & Marsh. Game Birds Ind.* i. p. 125 (1879); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 407 (1890); *Oates, Game Birds Ind.* i. p. 262 (1898); *Sharpe, Hand-l.* i. p. 33 (1899).

Lophophorus refulgens, *Grant, Cat. Birds B. M.* xxii. p. 278 (1893).

The eggs of the Monal Pheasant are of a regular oval shape and they possess a fair amount of gloss. They are of a cream-colour or buffy white, thickly freckled and marked all over with very dark reddish brown. On many specimens the markings are larger and more frequent on the central portion of the shell than elsewhere. They measure from 2·4 to 2·7 in length, and from 1·7 to 1·9 in breadth.

The eggs of this species cannot be separated with any certainty from those of *Meleagris gallopavo* (p. 64).

The eggs of the Common Koklass Pheasant are of a regular oval shape and fairly glossy. The ground-colour is creamy buff. The markings are of a very deep reddish and chocolate-brown, almost black in their intensity. Some specimens are merely speckled, others are spotted and blotched, and the markings in both cases are very regularly distributed over the shell. The eggs measure from 1·85 to 2·3 in length, and from 1·4 to 1·55 in breadth.

Numida mitrata, Pall.

Numida mitrata, *Cowan, Proc. R. Phys. Soc. Edin.* vii. p. 149 (1882); *Grant, Cat. Birds B. M.* xxii. p. 378 (1893); *Sharpe, Hand-l.* i. p. 42 (1899).

Numida mitrata, *var. tiarata*, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* ii. p. 500, pl. 305. fig. 4 (1885).

The eggs of Pallas's Helmeted Guinea-Fowl are of a pale brownish cream-colour, with the pores much darker, the shell thus presenting a spotted appearance. They measure from 1·85 to 2·05 in length, and from 1·6 to 1·7 in breadth.

|--------------------------|---------------------------|
| 6. Betsileo, Madagascar. | Rev. W. Deans Cowan [C.]. |
|--------------------------|---------------------------|

Genus ACRYLLIUM, Gray.

Acryllium vulturinum (Hardw.).

(Plate VII. fig. 1.)

Acryllium vulturinum, *Grant, Cat. Birds B. M.* xxii. p. 385 (1893); *Sharpe, Hand-l.* i. p. 42 (1899).

The single egg of the Vulturine Guinea-Fowl in the Collection is a regular broad oval, not much compressed at the small end, and thus differs markedly from those of the *Numida* group. The pores

are not so deep and distinct, and the shell possesses a considerable amount of gloss.

It is of a pale cream-colour, the pores being very slightly darker, and measures 1·95 by 1·55.

1. Laid in confinement (Zool. Gardens, Zool. Society.
London).

Family MELEAGRIDÆ.

Genus **MELEAGRIS**, *Linn.*

Meleagris gallopavo, *Linn.*

Meleagris gallopavo, *Thien. Fortpflanz. ges. Vög.* p. 14, tab. vi. fig. 2 (1845-54); *Baedeker, Eier Eur. Vög.* tab. 77. fig. 2 (1855-63); *Dresser, Ibis*, 1866, p. 25; *Grant, Cat. Birds B. M.* xxii. p. 387 (1893); *Sharpe, Hand-l.* i. p. 43 (1899).

Meleagris gallopavo, *var. mexicana*, *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 410 (1874).

Meleagris gallopavo mexicana, *Bendire, Life Hist. N. A. Birds*, i. p. 116, pl. iii. fig. 15 (1892).

The eggs of this Turkey are hardly separable from those of *Lophophorus impeyanus* (p. 52). They are of a regular oval shape, occasionally somewhat elongated, and they are glossy and smooth. The ground-colour varies from creamy white to creamy buff. They are rather thickly freckled and spotted all over with chocolate, rufous brown and yellowish brown. The markings are generally small, but occasionally a few blotches of considerable size occur. Specimens measure from 2·3 to 2·65 in length, and from 1·75 to 1·85 in breadth.

13. N. America. Gould Coll.
2. Laid in confinement (Zool. Gardens, Salvin-Godman Coll.
London).
2. Laid in confinement (Zool. Gardens, Zool. Society.
London).

Meleagris fera, *Vieill.*

Meleagris gallopavo, *var. gallopavo*, *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 404 (1874).

Meleagris gallopavo, *Bendire, Life Hist. N. A. Birds*, i. p. 112, pl. iii. fig. 14 (1892).

Meleagris americana, *Grant, Cat. Birds B. M.* xxii. p. 389 (1893).

Meleagris fera, *Sharpe, Hand-l.* i. p. 43 (1899).

The eggs of this species contained in the Collection differ from those of *M. gallopavo* in being smaller and of a much paler colour. They are of a very broad oval form, and have but little gloss. The ground-colour is of a pale creamy white, and the whole

shell is speckled with very pale yellowish brown. The markings are very small, being in no case larger than the head of an ordinary pin. The two eggs measure respectively: 2.25 by 1.72; 2.26 by 1.7.

2. Fort Cobb, Texas (*E. Palmer*).

Salvin-Godman Coll.

Genus **AGRIOCHARIS**, *Chapman*.

Agriocharis ocellata (*Cuv.*).

(Plate VII. fig. 6.)

Meleagris ocellata, *Grant, Cat. Birds B. M.* xxii. p. 391 (1893).

Agriocharis ocellata, *Sharpe, Hand-l.* i. p. 43 (1899).

The eggs of the Honduras Turkey do not differ in any particular from those of *M. gallopavo*. Three specimens measure respectively: 2.4 by 1.75; 2.4 by 1.8; 2.15 by 1.75.

Family ODONTOPHORIDÆ.

The eggs of the birds of this family differ to a remarkable extent both in colour and shape. Many are plain white, and others recall those of the Quails of the Old World.

Genus **DENDRORTYX**, *Gould*.

Dendrortyx leucophrys (*Gould*).

(Plate VII. fig. 7.)

Dendrortyx leucophrys, *Grant, Cat. Birds B. M.* xxii. p. 394 (1893)
Sharpe, Hand-l. i. p. 44 (1899).

An egg of the White-eyebrowed Long-tailed Partridge in the Collection is a regular oval, smooth and with little gloss, and is of a reddish-buff colour, spotted and blotched with reddish brown. It measures 1.75 by 1.22.

1. Coban, Guatemala (*Sarg*).

Salvin-Godman Coll.

Genus **OREORTYX**, *Baird*.**Oreortyx pictus** (*Dougl.*).

(Plate VII. fig. 3.)

Oreortyx pictus, *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 475 (1874); *Bendire, Life Hist. N. A. Birds*, i. p. 13 (1892); *Grant, Cat. Birds B. M.* xxii. p. 397 (1893); *Sharpe, Hand-l.* i. p. 44 (1899).

The single egg of the Plumed Partridge, or Mountain Quail, in the Collection is of a regular oval shape, smooth, with little gloss and of a pale creamy-buff colour. It measures 1.31 by 1.

1. Monterey, California (*Dr. Canfield*). Salvin-Godman Coll.

Genus **LOPHORTYX**, *Bp.***Lophortyx californicus** (*Shaw & Nodd.*).

Lophortyx californicus, *Baedeker, Eier Eur. Vög.* tab. 67. fig. 3 (1855-63); *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 479 (1874); *Grant, Cat. Birds B. M.* xxii. p. 400 (1893); *Sharpe, Hand-l.* i. p. 44 (1899).

Callipepla californica, *Bendire, Life Hist. N. A. Birds*, i. p. 23, pl. i. figs. 8-10 (1892).

The eggs of the Californian Quail are pyriform, slightly rough, with little gloss, and of a dull white or pale cream-colour, spotted and blotched with dark brown, pale rufous or yellowish brown. The blotches are frequently large and confluent. Specimens measure from 1.07 to 1.33 in length, and from .9 to 1 in breadth.

6. Laid in confinement (Zool. Gardens, Salvin-Godman Coll.
London).
4. N. America. Old Collection.
9. San Louis Obispo, California (*W.* Salvin-Godman Coll.
F. Schwarz; Henshaw Coll.).

Genus **EUPSYCHORTYX**, *Gould*.

The eggs of the Quails of this genus are pyriform, rarely of an oval shape.

Eupsychortyx leucopogon (*Less.*).

(Plate VII. figs. 4 & 5.)

Eupsychortyx leucotis, *Scl. & Salv. P. Z. S.* 1879, p. 544.

Eupsychortyx leucopogon, *Grant, Cat. Birds B. M.* xxii. p. 408 (1893); *Sharpe, Hand-l.* i. p. 45 (1899).

The eggs of the White-faced Crested Quail are of a creamy-buff

colour, marked with pale rufous. In one of the four specimens in the Collection the markings consist of small dots and large confluent freckles. In the others the markings consist of large blotches, frequently confluent and mingled with some specks and spots. They have no gloss, and measure respectively: 1·35 by 1; 1·25 by ·95; 1·35 by 1; 1·3 by 1·02.

4. Medellin, Antioquia, U.S. Colombia Salvin-Godman Coll.
(*T. K. Salmon*).

Eupsychortyx nigrigularis (*Gould*).

Eupsychortyx nigrigularis, *Grant, Cat. Birds B. M.* xxii. p. 412 (1893).
Eupsychortyx nigrigularis, *Sharpe, Hand-l.* i. p. 45 (1899).

The eggs of the Black-throated Crested Quail are plain white and fairly glossy. The two specimens in the Collection measure respectively: 1·15 by ·9; 1·27 by ·87.

1. Honduras (*Dyson*). Old Collection.
1. Valladolid, Yucatan (*Gaumer*). Salvin-Godman Coll.

Eupsychortyx hypoleucus, *Gould*.

Eupsychortyx hypoleucus, *Grant, Cat. Birds B. M.* xxii. p. 413 (1893);
Sharpe, Hand-l. i. p. 45 (1899).

The eggs of the White-breasted Crested Quail are plain white and very glossy. They measure from 1·15 to 1·3 in length, and from ·95 to 1·02 in breadth.

8. San Geronimo, Guatemala. Salvin-Godman Coll.

Genus **COLINUS**, *Less*.

The eggs of the Colins or 'Bob-Whites' are pyriform, plain white, and slightly glossy.

Colinus virginianus (*Linn.*).

- Perdix virginiana*, *Thien. Fortpflanz. ges. Vög.* p. 33, tab. vii. fig. 13 (1845-54).
Ortyx virginianus, *Gosse, Birds Jamaica*, p. 328 (1847); *A. & E. Newton, Ibis*, 1859, p. 254; *Grant, Cat. Birds B. M.* xxii. p. 415 (1893).
Ortyx virginianus, var. *virginianus*, *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 468 (1874).
Colinus virginianus, *Bendire, Life Hist. N. A. Birds*, i. p. 1, pl. i. fig. 1 (1892); *Sharpe, Hand-l.* i. p. 45 (1899).

The eggs of the Virginian Colin or Bob-White measure from 1·15 to 1·3 in length, and from ·9 to 1 in breadth.

Genus *CYRTONYX*, *Gould*.

Cyrtonyx montezumæ (*Vig.*).

- Cyrtonyx massena*, *Dresser, Ibis*, 1866, p. 29; *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 492 (1874).
Cyrtonyx montezumæ, *Bendire, Life Hist. N. A. Birds*, i. p. 35, pl. i. fig. 15 (1892); *Grant, Cat. Birds B. M.* xxii. p. 425 (1893); *Sharpe, Hand-l.* i. p. 46 (1899).

The eggs of the Massena Harlequin Quail do not apparently differ from those of the species of the genus *Colinus*. The sole example in the Collection measures 1·22 by 1.

- | | |
|--|---------------------|
| 1. San Antonio, Texas (<i>Dr. Heermann</i>). | Salvin-Godman Coll. |
|--|---------------------|

Genus **ODONTOPHORUS**, Vieill.**Odontophorus marmoratus** (Gould).

Odontophorus marmoratus, *Sci. & Salv. P. Z. S.* 1879, p. 545; *Grant, Cat. Birds B. M.* xxii. p. 433 (1893); *Sharpe, Hand-l.* i. p. 47 (1899).

The eggs of the Marbled Partridge are regular ovals. They are white with a considerable amount of gloss. The two specimens in the Collection measure respectively: 1·47 by 1·08; 1·5 by 1·1.

2. Remedios, Antioquia, U.S. Colombia Salvin-Godman Coll.
(*T. K. Salmon*).

Order **HEMIPODII**.Family **TURNICIDÆ**.

The eggs of the Hemipodes are either pyriform or of a broad oval shape, and they are rather glossy. They are double-spotted, but the surface-markings are frequently so dense that the shell-markings are obliterated.

Genus **TURNIX**, Bonn.**Turnix pugnax** (Temm.).

Perdix pugnax, *Thien. Fortpflanz. ges. Vög.* p. 36, tab. viii. fig. 5 (1845-54).

Turnix ocellatus, *Layard, Ann. & Mag. Nat. Hist.* (2) xiv. p. 107 (1854).

Turnix taigoor, *Hume & Marsh. Game Birds Ind.* ii. p. 169 (1879); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 367 (1890); *Barnes, Journ. Bomb. Nat. Hist. Soc.* vi. pl. i. fig. 832 (1891); *Grant, Cat. Birds B. M.* xxii. p. 530 (1893).

Turnix plumbeipes, *Hume & Marsh. tom. cit.* p. 177.

Turnix pugnax, *Oates, Game Birds Ind.* i. p. 57 (1898); *Sharpe, Hand-l.* i. p. 48 (1899).

Mr. Hume thus describes the eggs of the Bustard-Quail:—"The ground-colour is greyish white, very thickly and minutely speckled all over with what, on close examination, proves to be a mixture of minute dots of yellowish and reddish brown and pale purple. Some eggs have absolutely no markings except this minute dotting or stipling, but the majority have spots and blotches more or less thinly speckled over the surface (often only at the large end, always most thickly there) of intense reddish or blackish brown or even bluish black. The minute dottings in many eggs, everywhere dense, are most so at the large end, where, with the blotches, they occasionally form an irregular imperfect and ill-marked mottled or smudgy cap or zone." Specimens vary in shape from broad oval to pyriform, and measure from ·8 to 1·04 in length, and from ·71 to ·85 in breadth.

Turnix africanus, *Hewitson, Ibis*, 1859, p. 79, pl. ii. figs. 4, 5.

Turnix andalusica, *Seebohm, Eggs of Brit. Birds*, p. 278, pl. 59. fig. 2 (1896).

The eggs of the Andalusian Bustard-Quail are greyish white, dotted and speckled with pale purple and yellowish brown, and blotched, generally more densely at the broad end than elsewhere, with very dark brown or black. They vary much in the nature and distribution of the markings. The eggs are pyriform in shape, and measure from .96 to 1.15 in length, and from .8 to .85 in breadth.

10. Tangiers (*Favier*).

Seebohm Coll.

2. Algeria (*Capt. Loche*).

Salvin-Godman Coll.

Turnix lepurana (Smith).

(Plate VIII. fig. 8.)

Turnix lepurana, *Sharpe's ed. Layard, Birds S. Africa*, p. 608 (1875-84); *Grant, Cat. Birds B. M.* xxii. p. 539 (1893); *Sharpe, Hand-l.* i. p. 48 (1899).

The eggs of Smith's Bustard-Quail are greyish white with a pinkish tinge, densely spotted and speckled with pale purple, yellowish brown and reddish brown, more thickly at the larger end than elsewhere. The markings have a tendency to be confluent. The three examples in the Collection are pyriform and measure respectively: .87 by .68; .87 by .7; .88 by .72.

3. Lamu, E. Africa.

F. J. Jackson, Esq., C.B. [P.].

Turnix dussumieri (Temm.).

Turnix dussumieri, *Hume & Marsh. Game Birds Ind.* ii. p. 193 (1879); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 371 (1890); *Barnes, Journ. Bomb. Nat. Hist. Soc.* vi. pl. i. fig. 835 (1891); *Grant, Cat. Birds B. M.* xxii. p. 540 (1893); *Oates, Game Birds Ind.* i. p. 60 (1898); *Sharpe, Hand-l.* i. p. 48 (1899).

The eggs of the Little Bustard-Quail are greyish or yellowish white, freckled and spotted all over with pale purple and yellowish brown, and generally blotched as well with dark brown or black. These blotches are sometimes few in number and small in size; at other times they are large and bold. The eggs are pyriform in shape, and measure from .8 to .95 in length, and from .65 to .72 in breadth.

Turnix castanonota (Gould).

Perdix (Hemipodius) castanotus, *Thien. Fortpflanz. ges. Vög.* p. 54, tab. xii. fig. 7 (1845-54).

Turnix castanotus, *Gould, Handb. Birds Austr.* ii. p. 183 (1865).

Turnix castanonota, *Grant, Cat. Birds B. M.* xxii. p. 552 (1893); *Sharpe, Hand-l.* i. p. 49 (1899).

The eggs of the Chestnut-backed Bustard-Quail are quite different from those of all the other species of this group, being white, sparingly marked with small, distinct, round spots of pale purple and black, the latter predominating. They are pyriform, and measure from ·95 to 1·03 in length, and from ·84 to ·87 in breadth.

Turnix pyrrhotorax, *Gould, Handb. Birds Austr.* ii. p. 186 (1865); *North, Nests & Eggs Austr. Birds.* p. 287 (1889); *Grant, Cat. Birds B. M.* xxii. p. 553 (1893); *Sharpe, Hand-l.* i. p. 49 (1899).

The eggs of the Rufous-chested Bustard-Quail are greyish white, densely marked with more or less confluent specks of pale purple, yellowish brown, brown and black. The two examples in the Collection are very broadly pyriform, and measure respectively: ·95 by ·8; ·93 by ·8.

Turnix velox (Gould).

(Plate VIII. fig. 7.)

Turnix velox, *Gould, Handb. Birds Austr.* ii. p. 184 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 50 (1883); *North, Nests & Eggs Austr. Birds*, p. 286 (1889); *Grant, Cat. Birds B. M.* xxii. p. 553 (1893); *Sharpe, Hand-l.* i. p. 49 (1899).

In the eggs of the Swift-flying Bustard-Quail the ground-colour is pinkish, and this is covered in varying degrees with speckles, spots and small blotches, all of them more or less confluent, of dark reddish brown, pale purple, yellowish brown and chocolate-brown. On some specimens the blotches are of considerable size. Some examples are pyriform, others broad ovals, and they measure from .9 to 1 in length, and from .65 to .75 in breadth.

Genus **PEDIONOMUS**, *Gould*.

Pedionomus torquatus, *Gould*.

Pedionomus torquatus, *Gould*, *Handb. Birds Austr.* ii. p. 187 (1865): *Campbell, Nests & Eggs Austr. Birds*, p. 51 (1883); *North, Nests & Eggs Austr. Birds*, p. 283, pl. xvi. fig. 12 (1889); *Grant, Cat. Birds B. M.* xxii. p. 554 (1893); *Sharpe, Hand-l.* i. p. 49 (1899).

The eggs of the Collared Plain-Wanderer are somewhat remarkable. Two specimens in the Collection are pyriform, very lengthened and pointed, and closely resembling in shape those of some of the Plovers. They are of a pale green colour, thickly speckled and blotched with underlying markings of pale purple and surface-markings of dark brown and yellowish brown. A third specimen is white with numerous shell-markings of pale purple and a few surface-spots of brown. This latter is much shorter than the two above described. The three examples measure respectively: 1.4 by .97; 1.35 by .96; 1.2 by .96.

Order PTEROCLIDIFORMES.

Family PTEROCLIDIDÆ.

The eggs of the Sand-Grouse are long and cylindrical, both ends being equally rounded. Occasionally an example is biconical or slightly compressed at either end.

The texture is fine and smooth and the shell has a fine gloss.

All the eggs of the Sand-Grouse are double-spotted. The shell-markings consist of spots and blotches of irregular shape and of various shades of grey, lavender and pale purple. They are always numerous and distinctly visible. The eggs of all the species are so similar in colour and markings that no particular reference to their coloration need be made.

The surface-markings vary considerably in colour and character, and are of much service for the purpose of identification.

The eggs of the Sand-Grouse are curiously like those of the Nightjars both in shape and coloration.

Genus **SYRRHAPTES**, *Illiger*.

Syrrhaptes paradoxus (*Pall.*).

Syrrhaptes paradoxus, *Newton*, *P. Z. S.* 1861, p. 397, pl. xxxix. fig. 1 : *Dresser*, *Birds Eur.* vii. p. 75 (1876); *Seebohm*, *Brit. Birds*, ii. p. 419, pl. 20 (1884); *Grant*, *Cat. Birds B. M.* xxii. p. 2 (1893); *Seebohm*, *Eggs of Brit. Birds*, p. 160, pl. 47. figs. 10, 12 (1896); *Sharpe*, *Hand-l.* i. p. 50 (1899).

The eggs of Pallas's Three-toed Sand-Grouse are of a pale stone-colour. The surface-markings, consisting of specks, spots and blotches of yellowish brown, are evenly distributed over the shell. Seven examples measure from 1.55 to 1.7 in length, and from 1.13 to 1.25 in breadth.

2. Laid in confinement (Zool. Gardens, P. L. Sciater, Esq. [P.]. Amsterdam).
5. Altai Mountains, May (*C. A. Tancre*). Seebohm Coll.

Syrrhaptes tibetanus, *Gould*.

(Plate VIII. fig. 13.)

Syrrhaptes tibetanus, *Hume & Marsh. Game Birds Ind.* i. p. 43 (1879): *Grant*, *Cat. Birds B. M.* xxii. p. 5 (1893); *Oates*, *Game Birds Ind.* i. p. 18 (1898); *Sharpe*, *Hand-l.* i. p. 50 (1899).

The eggs of the Tibetan Three-toed Sand-Grouse in the Collection are of a pale creamy-buff colour. Both the shell-markings and the surface-markings are small, and the latter consist entirely of spots of dull reddish brown, evenly distributed over the whole shell. Two examples measure respectively: 1.9 by 1.37; 2 by 1.33.

2. Pamir, C. Asia. St. G. Littleddale, Esq. [P.].

Genus **PTEROCLIDURUS**, *Bp.*

Pteroclidurus alchatus (*Linn.*).

(Plate VIII. fig. 11.)

Pterocles alchata, *Hume & Marsh. Game Birds Ind.* i. p. 77 (1879). *Pteroclidurus alchata*, *Grant*, *Cat. Birds B. M.* xxii. p. 7 (1893); *Oates*, *Game Birds Ind.* i. p. 22 (1898). *Pteroclidurus alchatus*, *Sharpe*, *Hand-l.* i. p. 50 (1899).

The egg of the Eastern Pin-tailed Sand-Grouse in the Collection does not resemble the eggs of *P. pyrenaicus* so closely as might be expected. It is of a creamy-buff colour, and the surface-markings, which consist of small specks, spots and smudges of

pinkish brown, are rather closely deposited over the whole shell. It measures 1·66 by 1·15.

1. Jeenpur, Sind, 10th July.

Hume Coll.

Pteroclidurus pyrenaicus (Briss.).

Pterocles alchata, Thien. *Fortpflanz. ges. Vög.* p. 48, tab. x. fig. 2 a, b (1845-54); *Buedecker, Eier Eur. Vög.* tab. 21. fig. 8 (1855-63); *Salvin, Ibis*, 1859, p. 352; *Tristram, Ibis*, 1860, p. 70; *Bree, Birds Eur.* iii. p. 221, pl. — (1867); 2nd ed. iv. p. 131, pl. — (1875); *Saunders, Ibis*, 1871, p. 223; *Dresser, Birds Eur.* vii. p. 67 (1874).

Pteroclorus pyrenaicus, *Grant, Cat. Birds B. M.* xxii. p. 9 (1893).

Pteroclorus alchata, *Irby, Orn. Str. Gibr.* 2nd ed. p. 236 (1895).

Pteroclidurus pyrenaicus, *Sharpe, Hand-l.* i. p. 50 (1899).

The eggs of the Western Pin-tailed Sand-Grouse may be separated from those of all the other species of Sand-Grouse by their bold and brilliant coloration. They vary from a pale creamy buff to a fairly dark buff colour. The surface-markings consist of spots and blotches of rather dark reddish brown. These are, as a rule, very distinct and well-defined, but occasionally they are confluent, and are always very evenly distributed over the egg. The specimens in the Collection measure from 1·65 to 1·96 in length, and from 1·15 to 1·3 in breadth.

Pteroclidurus exustus, *Sharpe, Hand-l.* i. p. 50 (1899).

The eggs of the Common Pin-tailed Sand-Grouse are pinkish stone-colour, greyish white or cream-colour, occasionally tinged with green. The surface-markings consist of spots, specks, streaks and blotches of olive-brown and greyish brown. These markings, as a rule, thickly cover the shell, and occasionally they form a bold ring round one end of the egg. One specimen in the series is perfectly plain. They measure from 1·3 to 1·6 in length, and from ·95 to 1·15 in breadth.

Order COLUMBIFORMES.

The eggs of the Pigeons are white, the shell being almost invariably fine and smooth. The amount of gloss is variable.

They are normally of a perfect elliptical shape, both ends being equally rounded. Occasionally specimens are biconical or spheroidal in form; oval-shaped eggs are rarely met with.

In many large series of the eggs of the Pigeons, a number of specimens may be noticed of a drab or brown colour or with a

creamy tinge. There can be little doubt, however, that the eggs of all Pigeons are white when first laid, and that discoloration takes place after incubation has commenced. A few instances may be cited to support this conclusion.

The eggs of *Zenaida meridionalis* are said by Gosse ('Birds of Jamaica,' p. 307) to be of a drab colour, but the specimens taken by Messrs. A. & E. Newton (*Ibis*, 1859, p. 253), and now in the National Collection, are white.

The eggs of *Œna capensis* in the Collection are of a cream-colour, but Andersson ('Birds of Damara Land,' p. 235) remarks of this species that "its two white eggs have a rosy tint."

Of the fifteen eggs of *Chalcophaps indica* in the Collection, nine are cream-coloured, but no less than six are pure white.

In the following descriptions, therefore, of the eggs of the Pigeons, it will be understood that they are white unless the contrary is stated.

Sub-Order COLUMBÆ.

Genus **TRERON**, *V.***Treron nipalensis** (*Hodgs.*).

Treron nipalensis, *Oates ed. Hume, Nests & Eggs Ind. B.* ii. p. 370 (1890).

Treron nipalensis, *Salvadori, Cat. Birds B. M.* xxi. p. 34 (1893); *Sharpe, Hand-l. i.* p. 53 (1899).

The egg of the Thick-billed Green Pigeon in the Collection measures 1·13 by ·89, and is moderately glossy.

1. Thoungyin River, Tenasserim, 28th March (*C. T. Bingham*). Hume Coll.

Genus **OSMOTRERON**, *Bp.***Osmotreron phayrei**, *Blyth.*

Osmotreron phayrei, *Oates ed. Hume, Nests & Eggs Ind. B.* ii. p. 376 (1890).

Osmotreron phayrei, *Salvadori, Cat. Birds B. M.* xxi. p. 43 (1893); *Sharpe, Hand-l. i.* p. 54 (1899).

The egg of the Ashy-headed Green Pigeon in the Collection measures 1·2 by ·8, and is highly glossy.

1. Tavoy, Burma, 19th March (*J. Darling*). Hume Coll.

Osmotreron malabarica (*Jerd.*).

Osmotreron malabarica, *Oates ed. Hume, Nests & Eggs Ind. B.* ii. p. 375 (1890); *Salvadori, Cat. Birds B. M.* xxi. p. 45 (1893); *Sharpe, Hand-l. i.* p. 54 (1899).

Osmotreron affinis, *Blanf. Fauna Brit. Ind., Birds*, iv. p. 8 (1898).

The eggs of the Grey-fronted Green Pigeon in the Collection measure respectively : 1·07 by ·85; 1·1 by ·85, and are fairly glossy.

1. Wynaad, S. India, 7th April (*J. Darling*). Hume Coll.
1. Wynaad, 10th April (*J. D.*). Hume Coll.

Osmotreron bicincta (*Jerd.*).

Osmotreron bicincta, *Legge, Birds Ceyl.* p. 725 (1879); *Oates ed. Hume, Nests & Eggs Ind. B.* ii. p. 374 (1890); *Salvadori, Cat. Birds B. M.* xxi. p. 57 (1893); *Sharpe, Hand-l. i.* p. 54 (1899).

The eggs of the Orange-breasted Green Pigeon measure from 1 to 1·1 in length, and from ·85 to ·9 in breadth, and have a faint gloss.

2. Tippera, April (*V. Irwin*). Hume Coll.
1. Pegu, 15th May (*E. W. Oates*). Hume Coll.
1. Pegu, 15th May (*E. W. O.*). Seebohm Coll.
1. Pegu, 20th March (*E. W. O.*). Oates Coll.

Osmotreron vernans (Linn.).

Treron vernans, *Everett*, *P. Z. S.* 1889, p. 225; *id.* *List Birds Born.* p. 196 (1889).

Osmotreron vernans, *Oates ed. Hume, Nests & Eggs Ind. B.* ii. p. 375 (1890); *Salvadori, Cat. Birds B. M.* xxi. p. 60 (1893); *Sharpe, Hand-l.* i. p. 54 (1899).

The eggs of the Pink-necked Green Pigeon measure from 1.08 to 1.12 in length, and from .8 to .88 in breadth, and have but little gloss.

2. Kussoom, Malay Peninsula, 7th July Hume Coll.
(*W. Davison*).

2. Klang, Malay Peninsula, 12th Jan. Hume Coll.
(*W. D.*).

2. Labuan, Borneo, May. A. H. Everett, Esq. [P.].

Genus PHABOTRERON, Bp.**Phabotreron leucotis (Temm.).**

Phabotreron leucotis, *Salvadori, Cat. Birds B. M.* xxi. p. 67 (1893); *Sharpe, Hand-l.* i. p. 55 (1899).

Geopelia striata, *Grant & Whitehead* * (lapsu), *Ibis*, 1898, p. 246.

The eggs of the White-eared Pigeon are glossy, and measure from 1.05 to 1.13 in length, and from .77 to .8 in breadth.

4. Engaño, North-east Luzon, May. J. Whitehead, Esq. [C.].

Sub-Family PTILOPODINÆ.**Genus PTILOPUS, Swains.****Ptilopus perousei, Peale.**

Ptilonopus perousii, *Whitmee, Ibis*, 1875, p. 441.

Ptilopus perousei, *Salvadori, Cat. Birds B. M.* xxi. p. 87 (1893); *Sharpe, Hand-l.* i. p. 56 (1899).

The egg of Marie's Fruit-Pigeon in the Collection measures 1.16 by .97, and has little or no gloss.

1. Tongatabu, Friendly Islands. P. B. Leefe, Esq. [P.].

Ptilopus swainsoni, Gould.

Ptilinopus swainsonii, *Gould, Handb. Birds Austr.* ii. p. 106 (1865).

Ptilopus swainsoni, *Salvadori, Cat. Birds B. M.* xxi. p. 95 (1893); *Sharpe, Hand-l.* i. p. 57 (1899).

* The late Mr. Whitehead informed me that the eggs of this species were attributed by him to *Geopelia striata* by an oversight. They were really those of the present species.

The eggs of Swainson's Fruit-Pigeon in the Collection measure respectively: 1·2 by ·87; 1·26 by ·87. They have only a faint gloss.

1. Ain Djendeli, 20th May (*O. S.*). Salvin-Godman Coll.

Columba casiotis (Bp.).

Palumbus casiotis, *Oates ed. Hume, Nests & Eggs Ind. B. ii. p. 346* (1890).
Columba casiotis, *Salvadori, Cat. Birds B. M. xxi. p. 302* (1893);
Dresser, Birds Eur. ix. (Suppl.) p. 299 (1896); *Sharpe, Hand-l. i. p. 71* (1899).

The eggs of the Eastern Wood-Pigeon are glossy; three examples measure respectively: 1·55 by 1·12; 1·5 by 1·03; 1·55 by 1·05.

1. Himalayas, 16th June. Hume Coll.
2. Agrore Valley, Punjab, 20th May Hume Coll.
 (Col. Unwin).

Columba elphinstonei (Sykes).

Palumbus elphinstonii, *Oates ed. Hume, Nests & Eggs Ind. B. ii. p. 347* (1890).
Columba elphinstonei, *Salvadori, Cat. Birds B. M. xxi. p. 304* (1893);
Sharpe, Hand-l. i. p. 71 (1899).

The eggs of the Nilghiri Wood-Pigeon in the Collection are glossy and measure respectively: 1·45 by 1·06; 1·53 by 1·1; 1·51 by 1·18.

1. Nilghiris, June (*W. Davison*). Hume Coll.
2. Kotagherry, Nilghiris, 23rd June Hume Coll.
 (*Miss Cockburn*).

Columba ianthina, Temm.

Carpophaga ianthina, *Seebold, Birds Japan. Emp. p. 165* (1890).
Columba ianthina, *Salvadori, Cat. Birds B. M. xxi. p. 310* (1893).
Columba ianthina, *Sharpe, Hand-l. i. p. 71* (1899).

The egg of the Japanese Wood-Pigeon in the Collection is glossy and measures 1·55 by 1·14.

1. Chichishima, Japan, 6th June Seebold Coll.
 (*P. A. Holst*).

Sub-Family MACROPYGIINÆ.**Genus MACROPYGIA, Swains.****Macropygia tusalia (Hodgs.).**

Macropygia tusalia, *Oates ed. Hume, Nests & Eggs Ind. B. ii. p. 362* (1890); *Salvadori, Cat. Birds B. M. xxi. p. 338* (1893); *Sharpe, Hand-l. i. p. 73* (1899).

Two eggs of the Bar-tailed Cockoo-Dove in the Collection are moderately glossy and measure respectively: 1·37 by ·95; 1·37 by 1·03. One is spotted with dull yellow, but this is undoubtedly due to stains.

2. Mongphoo, Darjiling, June Hume Coll.
 (*J. Gammie*).

Sub-Family ECTOPISTINÆ.

Genus **ECTOPISTES**, Swains.**Ectopistes migratorius** (Linn.).

Columba migratoria, Thien. *Fortpflanz. ges. Vög.* p. 61, tab. xi. fig. 11 (1845-54).

Ectopistes migratorius, Baird, Brewer & Ridgw. *N. Amer. Birds*, iii. p. 368 (1874); Bendire, *Life Hist. N. A. Birds*, i. p. 132, pl. iv. fig. 6 (1892); Salvadori, *Cat. Birds B. M.* xxi. p. 369 (1893); Seebohm, *Eggs of Brit. Birds*, p. 160, pl. 47. fig. 11 (1896); Sharpe, *Hand-l.* i. p. 76 (1899).

The eggs of the Passenger-Pigeon measure from 1·36 to 1·6 in length, and from 1·04 to 1·17 in breadth.* They are moderately glossy.

Sub-Family GEOPELIINÆ.

Genus GEOPELIA, *Swains.*

Geopelia humeralis (Temm.)

- Erythrauchæna humeralis*, *Gould, Handb. Birds Austr.* ii. p. 142 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 49 (1883); *North, Nests & Eggs Austr. Birds*, p. 277 (1889).
Geopelia humeralis, *Salvadori, Cat. Birds B. M.* xxi. p. 455 (1893); *Sharpe, Hand-l.* i. p. 80 (1899).

The single egg of the Barred-shouldered Dove in the Collection measures 1·17 by ·8, and is almost glossless.

1. Lizard Island, N.E. Australia,' Gould Coll.
Aug. (*J. Macgillivray*).

Geopelia striata (*Linn.*).

Columba striata, *Thien. Fortpflanz. ges. Vög.* p. 60, tab. xi. fig. 10 (1845-54).

Geopelia striata, *Hume & Dav. Stray Feath.* vi. p. 423 (1878); *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* ii. p. 469, pl. 303. fig. 10 (1885); *Salvadori, Cat. Birds B. M.* xxi. p. 458 (1893); *Sharpe, Hand-l.* i. p. 80 (1899).

The single egg of the Barred Ground-Dove in the Collection measures ·82 by ·64, and is slightly glossy.

1. Tonka Island, Malay Peninsula, Hume Coll.
4th Feb. (*W. Davison*).

Sub-Family PERISTERINÆ.

Genus **COLUMBULA**, *Bp.*

Columbula picui (*Temm.*).

Columbula picui, *Scl. & Huds. Argent. Orn.* ii. p. 143 (1889); *Holland, Ibis*, 1892, p. 209; *Salvadori, Cat. Birds B. M.* xxi. p. 470 (1893); *Sharpe, Hand-l.* i. p. 81 (1899).

The eggs of the Picui Dove are glossy, and measure from ·9 to ·97 in length, and from ·65 to ·7 in breadth.

5. Argentine Republic, Oct. A. H. Holland, Esq. [C.].

Genus **CHAMÆPELIA**, *Swains.*

Chamæpelina passerina (*Linn.*).

Chamæpelina passerina, *Scl. & Salv. Ibis*, 1859, p. 223; 1860, p. 45; *Baird, Brewer & Ridgw. N. Amer. Birds*, iii. p. 389 (1874); *Cory, Birds Bahama Isls.* p. 139 (1880); *Reid, Bull. U.S. Nat. Mus.* no. 25, p. 225 (1884); *Feilden, Ibis*, 1889, p. 490; *Salvadori, Cat. Birds B. M.* xxi. p. 473 (1893); *Sharpe, Hand-l.* i. p. 81 (1899).

Chamæpelina trochila, *A. & E. Newton, Ibis*, 1859, p. 253.

Columbigallina passerina, *Bendire, Life Hist. N. A. Birds*, i. p. 148 (1892).

The eggs of the American Ground-Dove are highly glossy, and vary from ·8 to ·95 in length, and from ·62 to ·67 in breadth.

8. N. America. Salvin-Godman Coll.
2. Texas (*Smiths. Inst.*). Salvin-Godman Coll.
1. Dueñas, Guatemala, 7th March Salvin-Godman Coll.

| 1. | Central Chile, Nov. | Berkeley James Coll. |

Sub-Family PHABINÆ.

Genus *ŒNA*, *Selby*.

***Œna capensis* (*Linn.*).**

Œna capensis, *Sharpe's ed. Layard, Birds S. Africa*, p. 572 (1875-84); *Cowan, Proc. R. Phys. Soc. Edin.* vii. p. 149 (1882); *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* ii. p. 465 (1885); *Salvadori, Cat. Birds B. M.* xxi. p. 501 (1893); *Sharpe, Hand-l. i.* p. 83 (1899).

The eggs of the Long-tailed African Dove are cream-coloured. Two specimens, however, from Madagascar are pale bluish white, of unusually large size and of a pointed oval shape. The authenticity of these may be questioned. They measure $\cdot 91$ by $\cdot 64$ and $\cdot 95$ by $\cdot 65$ respectively. The other examples in the Collection measure $\cdot 8$ by $\cdot 6$. They have a moderate amount of gloss.

Genus **TYMPANISTRIA**, *Reichenb.*

Tympanistria tympanistria (*Temm. & Knip*).

Peristera tympanistria, *Gurney, Ibis*, 1860, p. 214.

Tympanistria tympanistria, *Sharpe's ed. Layard, Birds S. Africa*, p. 571 (1884); *Salvadori, Cat. Birds B. M.* xxi. p. 504 (1893); *Sharpe, Hand-l. i.* p. 83 (1899).

The sole egg of the White-breasted Wood-Dove in the Collection is cream-coloured and measures $\cdot 95$ by $\cdot 73$. It has very little gloss.

1. Natal.

T. Ayres, Esq. [C.].

Genus **CHALCOPHAPS**, *Gould*.

Chalcophaps chrysochlora, *Wagler*.

Chalcophaps chrysochlora, *Gould, Handb. Birds Austr.* ii. p. 118 (1865); *North, Nests & Eggs Austr. Birds*, p. 271 (1889); *Salvadori, Cat. Birds B. M.* xxi. p. 511 (1893); *Sharpe, Hand-l. i.* p. 83 (1899).

The three eggs of the Australian Bronze-winged Dove are glossy and measure respectively: $1\cdot 15$ by $\cdot 85$; $1\cdot 18$ by $\cdot 89$; $1\cdot 15$ by $\cdot 87$.

1. Moreton Bay, N.E. Australia.

Gould Coll.

2. Port Essington, N. Australia.

Gould Coll.

Chalcophaps indica (*Linn.*).

(Plate VIII. figs. 2 & 3.)

Chalcophaps indica, *Legge, Birds Ceyl.* p. 714 (1879); *Oates ed. Hume, Nests & Eggs Ind. B.* ii. p. 363 (1890); *Steere, List Birds & Mamm. Philip.* p. 24 (1890); *Salvadori, Cat. Birds B. M.* xxi. p. 514 (1893); *Sharpe, Hand-l. i.* p. 84 (1899).

The eggs of the Indian Bronze-winged Dove are either pure white or cream-coloured. They measure from $1\cdot 02$ to $1\cdot 19$ in length, and from $\cdot 78$ to $\cdot 9$ in breadth, and are highly glossy.

2. Mussoorie (*T. Hutton*).

Hume Coll.

2. Curzon, Nilghiris, 3rd May.

Hume Coll.

| 1. Batty Malve, Nicobars, 18th March | Hume Coll. |
| (W. Davison). | |
| 1. Louisiade Archipelago, New Guinea. | Zool. Society. |

Family GOURIDÆ.

Genus **GOURA**, *Steph.***Goura coronata** (*Linn.*).

Goura coronata, *Wallace, Ibis*, 1865, p. 395; *Salvadori, Cat. Birds B. M.* xxi. p. 620 (1893); *Sharpe, Hand-l.* i. p. 91 (1899).

The egg of the Common Crowned Pigeon in the Collection measures 2·27 by 1·62, and is moderately glossy.

1. Laid in confinement (Zool. Gardens, Zool. Society. London).

Goura victoria (*Fraser*).

Goura victoria, *Meyer, Sitz. u. Abh. Ges. Isis*, 1884, Abh. i. p. 52; *Salvadori, Cat. Birds B. M.* xxi. p. 624 (1893); *Sharpe, Hand-l.* i. p. 91 (1899).

The egg of the Victoria Crowned Pigeon in the Collection is glossy, and measures 1·95 by 1·45.

1. Laid in confinement (Zool. Gardens, Salvin-Godman Coll. London).

Family DIDUNCULIDÆ.

Genus **DIDUNCULUS**, *Peale*.**Didunculus strigirostris** (*Jard.*).

Didunculus strigirostris, *Finsch & Hartl. Fauna Centralpolyn.* p. 150, t. iii. fig. 1 (1867); *Newton, P. Z. S.* 1867, p. 164, pl. xv. fig. 6; *Whitmee, P. Z. S.* 1874, p. 183; *Salvadori, Cat. Birds B. M.* xxi. p. 626 (1893); *Sharpe, Hand-l.* i. p. 92 (1899).

The egg of the Tooth-billed Pigeon in the Collection is but slightly glossy, and measures 1·78 by 1·2*.

1. Laid on board ship. A. D. Bartlett, Esq.

* The egg of this species, as figured by Messrs. Finsch and Hartlaub (*l. c.*), is of a dark brown colour. The specimen in the Collection is white.

Order OPISTHOCOMIFORMES.

The eggs of *Opisthocomus hoazin*, the sole representative of the Order, closely resemble the eggs of some of the Rails, especially those of the *Hypotaenidia* group, and, like them, are double-spotted.

Family OPISTHOCOMIDÆ.

Genus OPISTHOCOMUS, Illiger.

Opisthocomus hoazin (P. L. S. Müll.).

Opisthocomus cristatus, Newton, P. Z. S. 1867, p. 164, pl. xv. fig. 7;
Cabanis, J. f. O. 1870, p. 318, taf. i. fig. 3; Quelch, Ibis, 1890,
p. 327.

Opisthocomus hoazin, Grant, Cat. Birds B. M. xxii. p. 524 (1893);
Sharpe, Hand-l. i. p. 93 (1899).

The eggs of the Hoatzin are fairly smooth, have little or no gloss, and vary in shape from the elliptical to the broad oval. They are of a pinkish cream-colour, marked with dots, smears, and blotches of pale lavender and reddish brown. The markings are generally more thickly clustered at one end of the egg than elsewhere. Specimens measure from 1.62 to 1.84 in length, and from 1.25 to 1.31 in breadth.

5. Demerara.

J. J. Quelch, Esq. [P.].

2. British Guiana (J. J. Quelch).

P. L. Selater, Esq. [P.].

Order RALLIFORMES.

The eggs of the Rails and Coots are for the most part double-spotted, but many exceptions occur, some being plain white, and others so densely marked with surface streaks and spots that no traces of the underlying markings are visible.

The texture of the shell is generally smooth, but many examples exhibit a certain roughness. The amount of gloss is variable.

Normally, the eggs of the Rails are of a regular oval form, but those of some species are elliptical, biconical, or even spheroidal.

Family RALLIDÆ.

Sub-Family RALLINÆ.

Genus **RALLUS**, *Linn.***Rallus elegans**, *Audub.*

Rallus elegans, *Baird, Brewer & Ridgw. Water Birds N. Am.* i. p. 353 (1884); *Sharpe, Cat. Birds B. M.* xxiii. p. 8 (1894); *id. Hand-l.* i. p. 93 (1899).

The eggs of the King-Rail, or Great Red-breasted Rail, are mostly of a regular oval form, with very little gloss. They vary from cream-colour to pale pinkish buff and they are spotted and blotched with reddish brown and pale purple. The markings are small and sparingly distributed over the shell. At the broader end, however, they are frequently of larger size and confluent. Numerous examples measure from 1.55 to 1.8 in length, and from 1.15 to 1.25 in breadth.

Rallus virginianus, Linn.

(Plate IX. fig. 1.)

Rallus virginianus, *Baird, Brewer & Ridgw. Water Birds N. Am.* i. p. 363 (1884); *Sharpe, Cat. Birds B. M.* xxiii. p. 16 (1894); *id. Hand-l.* i. p. 94 (1899).

The eggs of the Virginia, or Little Red-breasted, Rail are of an oval shape with a tendency to the pyriform. They have a considerable amount of gloss. The ground is cream-coloured and this is delicately marked with small well-defined spots of rufous and pale purple, which are more frequent at the large end than elsewhere. The eggs measure from 1.2 to 1.35 in length, and from .92 to .95 in breadth.

Rallus antarcticus, King.

(Plate IX. fig. 4.)

Rallus antarcticus, *Scl. & Huds. Argent. Orn.* ii. p. 148 (1889); *James, New List of Chilian Birds*, p. 10 (1892); *Sharpe, Cat. Birds B. M.* xxiii. p. 19 (1894); *id. Hand-l.* i. p. 94 (1899).

The eggs of the Antarctic Rail are of a broad oval form and they have little gloss. The ground is of a delicate pinkish-cream colour and this is sparingly spotted, except at the large end where the markings are more numerous, with rufous and pale purple. A few specimens are also marked at the large end with some twisted rufous lines. They measure from 1.62 to 1.75 in length, and from 1.2 to 1.25 in breadth.

|------------------------|----------------------|
| 8. Central Chile, Oct. | Berkeley James Coll. |
|------------------------|----------------------|

Rallus aquaticus, Linn.

Rallus aquaticus, *Thien. Fortpflanz. ges. Vög.* tab. lxxii. fig. 2, a-e (1845-54); *Baedeker, Eier Eur. Vög.* tab. 44. fig. 1 (1855-63); *Hewitson, Eggs of Brit. Birds*, ii. p. 373, pl. cv. fig. 1 (1856); *Salvin, Ibis*, 1859, p. 360; *Saunders, Ibis*, 1871, p. 225; *Dresser, Birds Eur.* vii. p. 257 (1878); *Seebohm, Brit. Birds*, ii. p. 552, pl. 23 (1884); *Sharpe, Cat. Birds B. M.* xxiii. p. 20 (1894); *Irby, Orn. Str. Gibr.* 2nd ed. p. 246 (1895); *Seebohm, Eggs of Brit. Birds*, p. 86, pl. 22. fig. 3 (1896); *Sharpe, Hand-l.* i. p. 94 (1899).

The eggs of the Water-Rail are normally of a regular oval form, but some are almost perfect ellipses. The amount of gloss is very variable, some possessing it in a high degree and others wanting it. The ground varies from a pinkish cream to a pale pinkish-buff colour, and this is marked with pale purple and reddish brown of different shades. The markings, as a rule, consist of small, well-defined specks and spots intermingled with a few small blotches, and they are more frequent at the large end, where they are often confluent. Specimens measure from 1.25 to 1.5 in length, and from .95 to 1.1 in breadth.

Genus **LIMNOPARDALIS**, *Cab.*

Limnopardalis sanguinolentus (*Swains.*).

Rallus sanguinolentus, *Yarr. P. Z. S.* 1847, p. 54.

Rallus rhytirhynchus, *Sel. & Salv. P. Z. S.* 1867, p. 990; *James, New List of Chilean Birds*, p. 10 (1892).

Limnopardalus sanguinolentus, *Sharpe, Cat. Birds B. M.* xxiii. p. 30 (1894).

Limnopardalis sanguinolentus, *Sharpe, Hand-l. i.* p. 95 (1899).

The eggs of the Blood-spotted Rail resemble those of *Rallus aquaticus*. An example from Peru is large, measuring 1·43 by 1·03; Chilean eggs are smaller, measuring from 1·25 to 1·37 in length, and from ·93 to ·95 in breadth. Yarrell (*l.c.*) gives the dimensions of an egg of this species as 1·8 by 1·25. Skins of *L. sanguinolentus*, procured by Mr. Whitely in Peru and Mr. James in Central Chile, are in the collection of the British Museum, and serve to confirm the authenticity of the eggs found by these naturalists in Peru and Chile respectively.

Genus **HYPOTÆNIDIA**, *Reichenb.*

The eggs of the Rails of this genus are normally of a very broad oval form, sometimes truly elliptical and, not unfrequently, spheroidal. The amount of gloss is very variable, even among the eggs of the same species.

Hypotænidia striata (*Linn.*).

Rallus striatus, *Swinh. Ibis*, 1863, p. 427.

Hypotænidia striata, *Sharpe, P. Z. S.* 1879, p. 352; *Hume & Marsh. Game Birds Ind.* ii. p. 245 (1879), iii. App. pl. ii. (1880); *Legge, Birds Ceyl.* p. 775 (1880); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 399 (1890); *Sharpe, Cat. Birds B. M.* xxiii. p. 33 (1894); *id. Hand-l. i.* p. 95 (1899).

The eggs of the Blue-breasted Banded Rail vary from a pinkish white to a salmon-pink or pinkish buff. The markings, which are pretty evenly distributed over the whole shell, consist of specks,

streaks and blotches varying from pale rufous to bright reddish brown, and underlying pale purple. In some the markings are small; in others they are large and often confluent, especially at the large end. Specimens measure from 1·3 to 1·4 in length, and from ·95 to 1·15 in breadth.

The eggs of the Andamanese Banded Rail are of a bright salmon-pink, marked with blotches of pale purple and reddish brown. The two sets of markings blend together and are scattered evenly over the whole egg.

The two examples in the Collection measure respectively 1·39 by 1·1 and 1·43 by 1·1; but Mr. Hume, writing of a considerable series, states that the eggs vary from 1·38 to 1·48 in length, and from 1·05 to 1·14 in breadth.

The eggs of the Pectoral Rail vary from pinkish white to rather bright salmon-pink, and the markings, which consist of well-defined spots and blotches and sometimes of streaks, are pale purple and reddish brown. Both sets of markings are most numerous at the large end. Specimens measure from 1·35 to 1·67 in length, and from 1·1 to 1·2 in breadth.

Genus **ARAMIDES**, *Pucher*.**Aramides albiventris**, *Lawr.*

(Plate IX. fig. 9.)

Aramides albiventris, *Sel. & Salv. P. Z. S.* 1868, p. 447; *Sharpe, Cat. Birds B. M.* xxiii. p. 59 (1894); *id. Hand-l.* i. p. 98 (1899).

The eggs of the White-bellied Wood-Rail are oval or sometimes bi-conical in form and have but a slight gloss. The ground is of a creamy-white colour, and this is spotted and speckled with reddish brown

and blotched with underlying pale purple. They closely resemble those of the Rails of the genus *Rallus*. Four examples measure respectively: 2·01 by 1·3; 2 by 1·42; 1·99 by 1·43; 2·04 by 1·38.

4. British Honduras, May (*F. Blanca-neaux*). Salvin-Godman Coll.

Aramides ypacaha (*Vieill.*).

Aramides ypacaha, *Scl. & Huds. Argent. Orn.* ii. p. 150 (1889); *Sharpe, Cat. Birds B. M.* xxiii. p. 60 (1894); *Blaauw, Bull. B. O. C.* vii. p. xliii (1898); *Sharpe, Hand-l.* i. p. 98 (1899).

The eggs of the Ypacaha Wood-Rail are of a broad oval form. The ground is of a pinkish cream-colour and the markings resemble those on the eggs of *A. albiventris*, but are larger and coarser. Three specimens measure respectively: 2·08 by 1·6; 2·1 by 1·55; 2·15 by 1·58.

1. Laid in confinement (Holland). F. E. Blaauw, Esq. [P.]
2. Laid in confinement (Zool. Gardens, London). Zool. Society.

Genus **OCYDROMUS**, *Wagler*.

Ocydromus australis (*Sparrm.*).

Ocydromus australis, *Potts, Tr. N. Z. Inst.* ii. p. 70 (1869), iii. p. 100 (1870); *Buller, Birds New Zeal.* 2nd ed. ii. p. 116 (1888); *Sharpe, Cat. Birds B. M.* xxiii. p. 64 (1894); *Blaauw, Bull. B. O. C.* vii. p. xliii (1898); *Sharpe, Hand-l.* i. p. 98 (1899).

The eggs of the New Zealand South-Island Wood-hen vary from a narrow to a broad oval form and have little gloss. They closely resemble the eggs of *Aramides ypacaha* and measure from 2·15 to 2·4 in length, and from 1·47 to 1·65 in breadth.

Genus **DRYOLIMNAS**, *Sharpe*.

Dryolimnas cuvieri (*Pucher.*).

Rallus gularis, *Cowan, Proc. R. Phys. Soc. Edin.* vii. p. 149 (1882); *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* ii. p. 569, pl. 306. fig. 2 (1885).
Dryolimnas cuvieri, *Sharpe, Cat. Birds B. M.* xxiii. p. 70 (1894); *id. Hand-l.* i. p. 99 (1899).

The eggs of the Madagascar Rail are broad oval, sometimes almost spheroidal, in shape, and of a pale creamy-white colour, with pale purple shell-markings and reddish-brown surface-markings.

Both sets are small, well-defined, and sparingly distributed over the shell. Six examples measure from 1·6 to 1·65 in length, and from 1·25 to 1·28 in breadth.

6. Betsileo, Madagascar.

Rev. W. Deans Cowan [C.].

Genus **CASTANOLIMNAS**, *Sharpe*.

Castanolimnas canningi (*Blyth*).

Rallina canningi, *Hume & Marsh. Game Birds Ind.* ii. p. 241 (1879); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 398 (1890).

Castanolimnas canningi, *Sharpe, Cat. Birds B. M.* xxiii. p. 80 (1894); *id. Hand-l.* i. p. 100 (1899).

The eggs of the Andamanese Banded Crake are of a very broad oval or spheroidal form, and are of a pinkish-buff colour, marked with numerous large pale purple, reddish-brown, and maroon-brown dashes and blotches. The two sets of markings are spread over the whole shell, but more thickly at the large end than elsewhere. The four examples in the Collection measure respectively: 1·45 by 1·1; 1·35 by 1·05; 1·42 by 1·12; 1·45 by 1·14.

4. Port Blair, Andamans, 16th July Hume Coll.

Genus **CREX**, *Bechst.*

Crex crex (*Linn.*).

Rallus crex, *Thien. Fortpflanz. ges. Vög.* tab. lxxii. fig. 3, *a-c* (1845-54).

Crex pratensis, *Baedeker, Eier Eur. Vög.* tab. 44. fig. 5 (1855-63); *Hewitson, Eggs of Brit. Birds*, ii. p. 372, pl. cv. fig. ii (1856); *Dresser, Birds Eur.* vii. p. 291 (1878); *Seebohm, Brit. Birds*, ii. p. 535, pl. 23 (1884); *id. Eggs of Brit. Birds*, p. 83, pl. 22. fig. 9 (1896).

Crex crex, *Sharpe, Cat. Birds B. M.* xxiii. p. 82 (1894); *id. Hand-l.* i. p. 100 (1899).

The eggs of the Corn-Crake are generally of a broad oval form, but elliptical examples are frequent. The ground varies from a creamy white to a pale buff, and it is occasionally of a pale bluish-white colour. This is marked, rather indistinctly, with small blotches of very pale purple, and with specks, spots, streaks, and blotches of reddish brown. Both sets of markings are somewhat sparingly scattered over the shell except at the larger end, where they are numerous and frequently confluent. On some specimens the markings consist entirely of fine dots. The eggs measure from 1·35 to 1·5 in length, and from 1 to 1·1 in breadth.

Crex parva, *Seebohm, Brit. Birds*, ii. p. 547, pl. 23 (1884); *id. Eggs of Brit. Birds*, p. 85, pl. 22. fig. 6 (1896).

Zapornia parva, *Sharpe, Cat. Birds B. M.* xxiii. p. 89 (1894); *id. Hand-l.* i. p. 101 (1899).

The eggs of the Little Crake vary from a regular oval to a biconical shape and are fairly glossy. They are quite abnormal in their coloration. The ground is of a buff or yellowish-brown colour, but this is almost entirely concealed by specks, spots and streaks of rufous brown of various shades. The four specimens in the Collection measure respectively: 1.27 by .9; 1.25 by .9; 1.25 by .85; 1.3 by .85.

Gallinula porzana, *Thien. Fortpflanz. ges. Vög.* tab. lxxiii. fig. 1, a-e (1845-54).

Porzana maruetta, *Baedeker, Eier Eur. Vög.* tab. 44. fig. 2 (1855-63); *Dresser, Birds Eur.* vii. p. 267 (1878); *Hume & Marsh, Game Birds Ind.* ii. p. 213 (1879).

Crex porzana, *Hewitson, Eggs of Brit. Birds*, ii. p. 375, pl. cvi. fig. ii (1856); *Seebohm, Brit. Birds*, ii. p. 540, pl. 23 (1884); *id. Eggs of Brit. Birds*, p. 84, pl. 22. fig. 1 (1896).

Porzana porzana, *Sharpe, Cat. Birds B. M.* xxiii. p. 93 (1894); *id. Hand-l.* i. p. 101 (1899).

The eggs of the Spotted Crake are mostly of a regular oval form, but occasionally they are spheroidal, and they have a considerable amount of gloss. The ground varies from pale buff to reddish buff,

and in some examples it is of a pale greenish white or stone-colour. The markings consist of specks, spots, and very small blotches of pale purple and dark maroon-brown. Numerous specimens measure from 1·15 to 1·4 in length, and from ·8 to ·1 in breadth.

Porzana auricularis, *Sharpe, Hand-l. i.* p. 102 (1899).

Mr. Hume appears to have examined many eggs of Pallas's Crake, the eastern representative of Baillon's Crake, but there is only a single specimen now in his collection. This resembles in colour the eggs of *P. pusilla*. "The egg of Pallas's Crake is oval, slightly pointed towards one end; the shell of a firm and compact texture, and with a slight gloss. The ground-colour is a sort of a pale olive stone-colour, or very slightly greenish drab, thickly freckled and mottled with faint dusky clouds and streaks, which, in all the eggs that I have seen, were most densely set towards the large end. The dusky markings in some eggs are a sort of pale sepia, but in others have a distinctly purplish tinge. They appear, however, to be at all times dull, inconspicuous and ill-defined. The eggs vary in length from 1·1 to 1·22, and in breadth from ·83 to ·91." (*Hume*.)

Genus *SAROTHRURA*, *Heine.*

Sarothrura insularis (*Sharpe*).

Corethrura insularis, *Cowan, Proc. R. Phys. Soc. Edin.* vii. p. 149 (1882);
Sharpe, Cat. Birds B. M. xxiii. p. 118 (1894).
Ortygometra insularis, *Milne-Edwards & Grandidier, Hist. Nat. Madag.,*
Ois. ii. p. 575 (1885).
Sarothrura insularis, *Sharpe, Hand-l. i.* p. 103 (1899).

The two eggs of Sharpe's Crake in the Collection are of an oval

form, slightly glossy and spotless white. They measure respectively: 1.13 by .83; 1.1 by .85.

2. Betsileo, Madagascar.

Rev. W. Deans Cowan [C.].

Genus **CRECISCUS**, *Cab.*

Creciscus jamaicensis (*Gm.*).

(Plate IX. fig. 8.)

Porzana jamaicensis, *Baird, Brewer & Ridgw. Water Birds N. Am.* i. p. 377 (1884).

Creciscus jamaicensis, *Sharpe, Cat. Birds B. M.* xxiii. p. 135 (1894); *id. Hand-l.* i. p. 104 (1899).

The eggs of the Little Black Crake in the Collection are of an elliptical shape. They have a slight gloss, and are creamy white, rather closely speckled with reddish brown and underlying pale purple. They measure respectively: 1 by .77; 1 by .76.

2. Calumet, Illinois, 17th June
(*De Witt*).

Salvin-Godman Coll.

Creciscus albigularis (*Lawr.*).

(Plate X. fig. 2.)

Porzana albigularis, *Scl. & Salv. P. Z. S.* 1879, p. 546.

Creciscus albigularis, *Sharpe, Cat. Birds B. M.* xxiii. p. 140 (1894); *id. Hand-l.* i. p. 105 (1899).

The eggs of the White-throated Crake in the Collection are oval or sub-elliptical in form and have hardly any gloss. They are creamy white, with a few small pale purple shell-markings and numerous small blotches and spots of reddish brown, more closely set at the larger end of the egg than elsewhere. They measure respectively: 1.3 by .87; 1.21 by .89.

2. Remedios, Antioquia, U.S. Colombia
(*T. K. Salmon*).

Salvin-Godman Coll.

Creciscus cayennensis (*Bodd.*).

(Plate X. fig. 1.)

Porzana cayennensis, *Scl. & Salv. P. Z. S.* 1879, p. 545.

Creciscus cayennensis, *Sharpe, Cat. Birds B. M.* xxiii. p. 143 (1894).

Creciscus cayennensis, *Sharpe, Hand-l.* i. p. 105 (1899).

The single egg of the Cayenne Crake in the Collection is elliptical in shape, has little or no gloss, and is dull white with a very few minute and inconspicuous specks of pale yellowish brown. It measures 1.37 by .95.

1. Remedios, Antioquia, U.S. Colombia
(*T. K. Salmon*).

Salvin-Godman Coll.

Genus **LIMNOBÆNUS**, *Sundev.***Limnobænus fuscus** (*Linn.*).

Porzana fusca, *Swinh. Ibis*, 1863, p. 426; *Hume & Marsh. Game Birds Ind.* ii. p. 217 (1879); *Legge, Birds Ceyl.* p. 769 (1880); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 396 (1890).
Limnobænus fuseus, *Sharpe, Cat. Birds B. M.* xxiii. p. 146 (1894); *id. Hand-l.* i. p. 105 (1899).

The single egg of the Ruddy Crake in the Collection is of an elliptical form, has little gloss, and is of a pinkish-white colour, rather delicately speckled and blotched with reddish brown and underlying pale purple. It measures 1·14 by ·85.

1. *Formosa* (*R. Swinhoe*). Seebohm Coll.

Genus **AMAUORNIS**, *Reichenb.***Amauornis olivacea** (*Meyen*).

Amauornis olivacea, *Steere, List Mamm. & Birds Philipp.* p. 26 (1890); *Sharpe, Cat. Birds B. M.* xxiii. p. 153 (1894); *Grant & Whitehead, Ibis*, 1898, p. 247; *Sharpe, Hand-l.* i. p. 106 (1899).

The eggs of the Philippine Crake are of a broad oval form, and they have but little gloss. The ground is creamy white, and this is spotted, streaked and blotched, more thickly at the larger end than elsewhere, with reddish brown and underlying pale purple. Two examples measure respectively : 1·65 by 1·22; 1·55 by 1·13.

2. *Siquijor*, Philippine Islands. Steere Exped.

Amauornis akool (*Sykes*).

Porzana akool, *Hume & Marsh. Game Birds Ind.* ii. p. 225 (1879), iii. App. pl. iii. (1880); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 396 (1890); *Barnes, Journ. Bomb. Nat. Hist. Soc.* vi. p. 139, pl. —. fig. 908 (1891).

Amauornis akool, *Sharpe, Cat. Birds B. M.* xxiii. p. 155 (1894); *id. Hand-l.* i. p. 106 (1899).

The eggs of the Brown Crake are normally of a broad oval form, and they have but little gloss. The ground is creamy white, and this is covered with streaky markings of a reddish-brown colour, which are more frequent at the larger end and often form a confluent cap. Sometimes the markings attain the dimensions of large blotches, but as a rule they consist of streaks of small size. The underlying markings are of the usual pale purple type. Specimens measure from 1·4 to 1·57 in length, and from 1 to 1·15 in breadth.

Amaurornis phœnicura, *Sharpe, Cat. Birds B. M.* xxiii. p. 156 (1894); *id. Hand-l.* i. p. 106 (1899).

The eggs of the White-breasted Crane bear a general resemblance to the eggs of *A. akool*, but they are much more richly coloured. The ground varies from a pinkish cream-colour to a warm pinkish buff. The markings, like those on the eggs of *A. akool*, present a streaky appearance, but they are much broader and coarser, and cover more of the ground. Numerous examples measure from 1·4 to 1·7 in length, and from 1·1 to 1·22 in breadth.

Genus **TRIBONYX**, *Du Bus*.**Tribonyx mortieri**, *Du Bus*.

Tribonyx mortieri, *Gould, Handb. Birds Austr.* ii. p. 324 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 60 (1883); *North, Nests & Eggs Austr. Birds*, p. 324, pl. xix. fig. 4 (1889); *Sharpe, Cat. Birds B. M.* xxiii. p. 164 (1894); *id. Hand-l.* i. p. 106 (1899).

The sole egg of Mortier's *Tribonyx* in the Collection is a regular oval, with little gloss, and of a buff colour sparingly marked with round specks and spots evenly distributed over the whole shell. The underlying markings are of a pale purple, and the surface-markings of a chestnut-brown, colour. On close examination, the egg is found to be also dusted with very minute dots of purple and reddish brown. It measures 2·25 by 1·5.

1. Tasmania.

Gould Coll.

Genus **MICROTRIBONYX**, *Sharpe*.**Microtribonyx ventralis** (*Gould*).

Tribonyx ventralis, *Gould, Handb. Birds Austr.* ii. p. 325 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 60 (1883); *North, Nests & Eggs Austr. Birds*, p. 324, pl. xvii. fig. 4 (1889).

Microtribonyx ventralis, *Sharpe, Cat. Birds B. M.* xxiii. p. 165 (1894); *id. Hand-l.* i. p. 107 (1899).

Of the two eggs of the Black-tailed *Tribonyx* in the Collection, one is a regular oval, the other a narrow ellipse. Both are fairly glossy and of a bluish-green colour, sparingly marked with round and oval spots and blotches. The shell-markings are very pale purple; the surface-markings are dull rufous brown. In one specimen there are, in addition, chiefly at the larger end, several fine lines of the latter colour and the whole shell is, moreover, very finely stippled with pale rufous. They measure respectively: 1·9 by 1·2; 1·85 by 1·2.

2. S. Australia.

Gould Coll.

Genus **PAREUDIASTES**, *Hartl. & Finsch*.**Pareudiastes pacificus**, *H. & F.*

(Plate IX. fig. 6.)

Pareudiastes pacificus, *Whitmee, P. Z. S.* 1874, p. 184; *id. Ibis*, 1875, p. 446; *Slater, P. Z. S.* 1874, p. 605; *Sharpe, Cat. Birds B. M.* xxiii. p. 166 (1894); *id. Hand-l.* i. p. 107 (1899).

The sole egg of the Samoan *Gallinule* in the Collection is of a narrow oval form. The ground is creamy-white and this is marked with numerous spots of reddish brown and purplish brown, together with some pale purple underlying blotches. The markings of both kinds are more numerous at the larger end than elsewhere. It measures 1·8 by 1·25.

1. Samoa, Oct. (*S. J. Whitmee*).

P. L. Slater, Esq. [P.].

Genus **PORPHYRIORNIS**, *Allen*.**Porphyriornis nesiotis** (*Scl.*).

(Plate IX. fig. 7.)

Porphyriornis nesiotis, *Sharpe, Cat. Birds B. M.* xxiii. p. 166 (1894); *id. Hand-l.* i. p. 107 (1899).

The egg of the Tristan d'Acunha Gallinule in the Collection is of a narrow oval form, nearly glossless, and of a pinkish cream-colour, marked with a few small roundish spots and some rather large blotches of reddish brown. The blotches about the middle of the egg are larger than those elsewhere. There are also some small pale purple underlying blotches, evenly distributed over the shell. It measures 1.95 by 1.3.

1. Tristan d'Acunha Island.

A. Earle, Esq. [P.].

Genus **GALLINULA**, *Briss.***Gallinula tenebrosa**, *Gould*.

Gallinula tenebrosa, *Gould, Handb. Birds Austr.* ii. p. 328 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 60 (1883); *North, Nests & Eggs Austr. Birds*, p. 325 (1889); *Sharpe, Cat. Birds B. M.* xxiii. p. 168 (1894); *id. Hand-l.* i. p. 107 (1899).

The eggs of the Sombre Gallinule in the Collection are of a very broad oval form, have a considerable amount of gloss, and are of a creamy-white colour, marked with numerous specks, spots, streaks, and small blotches of a bright rusty brown, which are more dense at the larger end than elsewhere. There are also a few inconspicuous specks and spots of pale purple underlying the others. The two specimens measure respectively: 1.57 by 1.17; 1.6 by 1.2.

2. New South Wales.

Gould Coll.

Gallinula chloropus (*Linn.*).

Gallinula chloropus, *Thien. Fortpflanz. ges. Vög.* tab. lxxiii. fig. 8, a-f (1845-54); *Baedeker, Eier Eur. Vög.* tab. 44. fig. 7 (1855-63); *Hewitson, Eggs of Brit. Birds*, ii. p. 378, pl. cvii. fig. i (1856); *Saunders, Ibis*, 1871, p. 225; *Dresser, Birds Eur.* vii. p. 313 (1879); *Legge, Birds Ceyl.* p. 781 (1880); *Seeböhm, Brit. Birds*, ii. p. 557, pl. 23 (1884); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 389 (1890); *Sharpe, Cat. Birds B. M.* xxiii. p. 169 (1894); *Seeböhm, Eggs of Brit. Birds*, p. 87, pl. 22. fig. 7 (1896); *Grant & Whitehead, Ibis*, 1898, p. 246; *Sharpe, Hand-l.* i. p. 107 (1899).

Gallinula chloropus, *var. pyrrhorhoa*, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* ii. p. 594, pl. 306. fig. 5 (1885).

The eggs of the Moor-hen are normally of a broad oval form, and have a small amount of gloss. The ground-colour varies much, being creamy white, pale greenish white, pale buff or pinkish buff. The markings consist of specks, spots, and bold blotches of deep reddish brown, and a few underlying pale purple spots. The combinations in which these markings occur are numerous. In some, the

markings are all small and densely set over the shell; in others, spots are combined with huge blotches which are often confluent. As a rule the larger end of the egg is more thickly marked than the other parts. A few specimens are devoid of all markings except some pale purple blotches. Examples vary from 1·55 to 2·17 in length, and from 1·1 to 1·42 in breadth.

Gallinula galeata, Bp.

(Plate IX. fig. 3.)

Gallinula galeata, *Thien. Fortpflanz. ges. Vög.* tab. lxxiii. fig. 6 (1845-54); *Gosse, Birds Jamaica*, p. 381 (1847); *A. & E. Newton, Ibis*, 1859, p. 260; *Baird, Brewer & Ridgw. Water Birds N. Am.* i. p. 388 (1884); *Feilden, Ibis*, 1889, p. 499; *James, New List of Chilean Birds*, p. 10 (1892); *Sharpe, Cat. Birds B. M.* xxiii. p. 177 (1894); *id. Hand-l.* i. p. 107 (1899).

The eggs of the Florida Gallinulo resemble those of *G. chloropus* in texture, shape and colour, but they are, on the whole, rather larger.

Genus **PORPHYRIOPS**, *Pucher.*

Porphyriops melanops (*Vieill.*).

(Plate X. fig. 4.)

Gallinula crassirostris, *Yarr. P. Z. S.* 1847, p. 54.

Porphyriops melanops, *Scl. & Huds. Argent. Orn.* ii. p. 156 (1889); *James, New List of Chilean Birds*, p. 10 (1892); *Sharpe, Cat. Birds B. M.* xxiii. p. 182 (1894); *id. Hand-l.* i. p. 108 (1899).

The eggs of the Thick-billed Water-hen are of a blunt oval form, glossy, and of a brownish-buff colour, with a few small pale purple blotches sunk into the shell, and numerous spots, specks, and small blotches of rich chocolate-brown on the surface. These latter are most frequent at the large end of the egg, where in many specimens they are mixed with some twisted and knotted lines. The eggs measure from 1.5 to 1.7 in length, and from 1.1 to 1.2 in breadth.

Genus **GALLICREX**, *Blyth.*

Gallixrex cinerea (*Lath.*).

(Plate X. fig. 6.)

Gallinula cristata, *Thien. Fortpflanz. ges. Vög.* tab. lxxiii. fig. 4 (1845-54).

Gallixrex cristata, *Swinh. Ibis*, 1861, p. 56; 1863, p. 425.

Gallixrex cinerea, *Legge, Birds Ceyl.* p. 791 (1880); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 387 (1890); *Barnes, Journ. Bomb. Nat. Hist. Soc.* vi. p. 137, pl. —, fig. 904 (1891); *Sharpe, Cat. Birds B. M.* xxiii. p. 183 (1894); *id. Hand-l.* i. p. 108 (1899).

The eggs of the Kora, or Water-Cock, are of a blunt oval form and glossy. They vary from cream-colour to yellowish or greenish stone-colour. The underlying markings consist of spots and

blotches of pale purple, generally inconspicuous; the surface-markings consist of blotches and streaks of reddish brown; at times profusely set over the whole shell, almost concealing the ground; at others, sparingly scattered over the egg, except at the large end, where they frequently form a cap. The intensity of the reddish brown varies a good deal in different specimens. Numerous examples measure from 1.55 to 1.8 in length, and from 1.1 to 1.3 in breadth.

Genus **PORPHYRIOLOA**, *Blyth*.

Porphyriola alleni (*Thoms.*).

Porphyrio alleni, *Dresser, Birds Eur.* vii. p. 307 (1880).

Porphyriola alleni, *Sharpe, Cat. Birds B. M.* xxiii. p. 187 (1894); *id. Hand-l.* i. p. 108 (1899).

The sole egg of Allen's Gallinule contained in the Collection was extracted from the body of a bird shot by Mr. Percival. It is fractured, but its approximate dimensions are 1.4 by 1.05. The ground is of a pinkish cream-colour, and this is marked, more thickly at the larger end than elsewhere, with specks, spots, and small blotches of reddish brown and underlying pale purple.

1. Ruw River, British Central Africa. A. B. Percival, Esq. [P.]

Porphyriola martinica (*Linn.*).

Gallinula martinicensis, *Thien. Fortpflanz. ges. Vög.* tab. lxxii. fig. 12 (1845-54).

Ionornis martinica, *Baird, Brewer & Ridgw. Water Birds N. Am.* i. p. 384 (1884).

Porphyriola martinica, *Sharpe, Cat. Birds B. M.* xxiii. p. 189 (1894); *id. Hand-l.* i. p. 108 (1899).

The eggs of the American Purple Gallinule are of a blunt oval form, with a small amount of gloss. They are of a pinkish cream-colour closely speckled with minute dots of chocolate-brown and underlying pale purple. The markings are very distinct and small. Four specimens measure respectively: 1.6 by 1.1; 1.58 by 1.13; 1.6 by 1.07; 1.57 by 1.1.

4. Panama (*J. McLeannan*). Salvin-Godman Coll.

Genus **PORPHYRIO**, *Briss.*

Porphyrio caeruleus (*Vandelli*).

- Porphyrio veterum*, *Baedeker, Eier Eur. Vög.* tab. 44. fig. 6 (1855-63); *Dresser, Birds Eur.* vii. p. 299 (1876).
Porphyrio hyacinthinus, *Salvin, Ibis*, 1859, p. 361; *Bree, Birds Eur.* iv. p. 77, pl. — (1867); 2nd ed. v. p. 44, pl. — (1876); *Saunders, Ibis*, 1871, p. 225.
Porphyrio caeruleus, *Sharpe, Cat. Birds B. M.* xxiii. p. 194 (1894); *id. Hand-l.* i. p. 108 (1899).

The eggs of the European Purple Gallinule vary in form from oval to elliptical, and they have very little gloss. The ground ranges from cream-colour to pinkish buff and this is marked, rather thickly, with specks, spots and, sometimes, with small blotches of reddish brown, chocolate-brown and pale purple. The markings on the majority of the eggs are well-defined and roundish in shape; on a few they are blotchy and blurred at the edges. The markings are somewhat larger and more numerous at the broad end. Twelve specimens measure from 2 to 2·25 in length, and from 1·35 to 1·5 in breadth.

***Porphyrio smaragdinus*, Temm.**

- Porphyrio vitiensis*, *Finsch & Hartl. Fauna Centralpolyn.* p. 172, t. iii. fig. 2 (1867); *E. L. & L. C. Layard, Ibis*, 1882, p. 536.
Porphyrio smaragdinus, *Sharpe, Cat. Birds B. M.* xxiii. p. 203 (1894); *id. Hand-l.* i. p. 109 (1899).

The eggs of the Pacific Blue Gallinule are of a broad oval form, the shell being extremely rough and without any gloss. The ground-colour varies from pinkish cream to pinkish buff. The markings consist of spots, blotches, and very numerous small specks of reddish brown and pale purple. The blotches are of considerable size, blurred at the edges and ill-defined, and they frequently form an irregular cap at the larger end. Specimens measure from 1·9 to 2·15 in length, and from 1·32 to 1·4 in breadth.

30. Laid in confinement (Sydney, P. L. Selater, Esq. [P.].
N. S. Wales).

***Porphyrio samoensis*, Peale.**

- Porphyrio indicus*, *Whitmee, Ibis*, 1875, p. 446.
Porphyrio samoensis, *Sharpe, Cat. Birds B. M.* xxiii. p. 204 (1894); *id. Hand-l.* i. p. 109 (1899).

The single egg of the Samoan Blue Gallinule in the Collection is of an oval form, slightly rough and possesses little gloss. The ground is of a pinkish cream-colour, and this is spotted and blotched with dark reddish brown and pale purple. The markings are more numerous and larger at the broad end of the egg than elsewhere. The specimen measures 1·78 by 1·3.

1. Samoa, September (*S. J. Whitmee*). P. L. Selater, Esq. [P.].

***Porphyrio melanonotus*, Temm.**

- Porphyrio melanotus*, *Gould, Handb. Birds Austr.* ii. p. 321 (1865); *Potts, Tr. N. Z. Inst.* ii. p. 71 (1869), iii. p. 102 (1870); *Campbell, Nests & Eggs Austr. Birds*, p. 59 (1883); *North, Nests & Eggs Austr. Birds*, pp. 323, 415 (1889).
Porphyrio melanonotus, *Buller, Birds New Zeal.* 2nd ed. ii. p. 79 (1888); *Sharpe, Cat. Birds B. M.* xxiii. p. 205 (1894); *id. Hand-l.* i. p. 109 (1899).

The eggs of the Black-backed Blue Gallinule do not differ in any particular respect from those of *P. coruleus* and *P. poliocephalus*,

excepting that they do not appear ever to exhibit a pinkish ground, all the specimens in the Collection being of a pale cream or creamy-buff colour. They measure from 2 to 2·3 in length, and from 1·35 to 1·6 in breadth.

Birds*, p. 87, pl. 22. fig. 2 (1896); *Sharpe, Hand-l.* i. p. 109 (1899).

Fulica pullata, *Thien. tom. cit.* tab. lxxiv. fig. 3.

The eggs of the Coot are of a regular oval shape, but sometimes they are elliptical or biconical. They are fairly smooth but have little gloss. The ground varies, being of a cream-colour in some, pale buff or pinkish stone-colour in others. The markings consist of minute specks and small spots of pale purple and blackish brown, usually round and extremely distinct and well-defined. Numerous examples measure from 1·75 to 2·3 in length, and from 1·25 to 1·55 in breadth.

Fulica armillata, Vieill.

(Plate X. fig. 8.)

Fulica armillata, *Scl. & Huds. Argent. Orn.* ii. p. 157 (1889); *James, New List of Chilean Birds*, p. 10 (1892); *Holland, Ibis*, 1892, p. 209; *Sharpe, Cat. Birds B. M.* xxiii. p. 218 (1894); *id. Hand-l.* i. p. 110 (1899).

The eggs of the Red-gartered Coot are of the same type as those of *F. atra*, but they are larger, and the ground-colour is much darker. The markings also, instead of being small, round, and well-defined, are in many cases large, of very irregular shape, and blurred at the edges. Specimens measure from 2.1 to 2.45 in length, and from 1.35 to 1.6 in breadth.

| 3. | Argentine Republic, Oct. | A. H. Holland, Esq. [C.]. |

Fulica gigantea, Eydl. & Souleyet.

Fulica gigantea, James, *New List of Chilean Birds*, p. 10 (1892); *Sharpe, Cat. Birds B. M.* xxiii. p. 219 (1894); *Lane, Ibis*, 1897, p. 301; *Sharpe, Hand-l. i.* p. 110 (1899).

The eggs of the Giant Coot are of a blunt oval or elliptical form, the shell being coarse in texture and without gloss. On account of their large size and the character of the markings, they are easily separable from the eggs of all the other Coots in the Collection. The ground is of a pale cream-colour, and this is sparingly marked with spots and somewhat large blotches of reddish brown and a few shell-markings of pale purple. Five specimens measure from 2.5 to 2.75 in length, and from 1.7 to 1.8 in breadth.

5. Province of Tarapaca, Chile (*Rahmer* Berkeley James Coll. & *Lane*).

Fulica rufifrons, Philippi & Landb.

(Plate X. fig. 7.)

Fulica leucopygia, *Durnford, Ibis*, 1878, p. 66.

Fulica leucopyga, *Scl. & Huds. Argent. Orn.* ii. p. 157 (1859); *Sharpe, Cat. Birds B. M.* xxiii. p. 220 (1894).

Fulica rufifrons, *Sharpe, Hand-l. i.* p. 110 (1899).

The eggs of the Red-fronted Coot are oval, smooth, and have a small amount of gloss. They are of a pale creamy buff, tinged with green. The underlying markings are few in number, small and of a pale purple colour. The surface-markings are more numerous and consist of specks, small spots and blotches, of rich chocolate-brown. One example has a few twisted lines on the larger end, where, as a rule, there is a tendency for the markings to be more numerous than elsewhere. The three specimens in the Collection measure respectively: 2.15 by 1.45; 2 by .38; 2.22 by 1.41.

3. Argentine Republic, Oct.

A. H. Holland, Esq. [C.].

Fulica americana

Fulica americana, *Thien. Fortpflanz. ges. Vög.* tab. lxxiv. fig. 2 (1845-54); *Gosse, Birds Jamaica*, p. 384 (1847); *Salv. & Scl. Ibis*, 1860, p. 45; *Blakiston, Ibis*, 1863, p. 135; *Baird, Brewer & Ridgw. Water Birds N. Am.* i. p. 393 (1884); *Sharpe, Cat. Birds B. M.* xxiii. p. 221 (1894); *id. Hand-l. i.* p. 110 (1899).

The eggs of the American Coot only differ from those of *F. atra* by their smaller size. They measure from 1.75 to 2.05 in length, and from 1.25 to 1.33 in breadth.

5. N. America (*Henshaw Coll.*).

Fulica leucoptera, Vieill.

(Plate X. fig. 5.)

Fulica leucoptera, *Durnford, Ibis*, 1878, p. 67; *Scl. & Huds. Argent. Orn.* ii. p. 158 (1889); *Holland, Ibis*, 1892, p. 210; *Sharpe, Cat. Birds B. M.* xxiii. p. 224 (1894); *Lane, Ibis*, 1897, p. 302; *Sharpe, Hand-l.* i. p. 110 (1899).

The eggs of the Yellow-billed Coot are oval, fairly smooth, and almost devoid of gloss. They are of a rich creamy-buff colour, speckled all over with pale purple and rich chocolate-brown. The markings are very small and evenly distributed over the shell. The three examples in the Collection measure respectively: 1·85 by 1·3; 1·7 by 1·22; 1·85 by 1·28.

3. Argentine Republic, Sept.

A. H. Holland, Esq. [C.].

Order PODICIPEDIDIFORMES.

The eggs of the Grebes are of a lengthened elliptical or biconical shape, the two ends being closely alike in contour. Some are of an oval form, but they are in the minority.

The true shell is generally of a very pale greenish-blue colour, but in fresh eggs it is covered with a thin coat of chalky white matter, which obscures or completely conceals it. At first the eggs have little, if any, gloss. As incubation proceeds, however, the calcareous covering is worn away, the shell turns to a yellowish-brown, and eventually to a dark earthy-brown, colour, so that in most cases the egg becomes very smooth and highly glossy.

The eggs of the various species of Grebes resemble each other closely, and they cannot be separated in any way except, in some instances, by their size.

Family PODICIPEDIDÆ.

Genus PODICIPES, *Lath.*

Podiceps fluviatilis (*Tunst.*).

- Podiceps minor*, *Thien. Fortpflanz. ges. Vög.* tab. lxxiv. fig. 10, *a, b* (1845-54); *Hewitson, Eggs of Brit. Birds*, ii. p. 446, pl. cxxi. fig. i (1856); *Salvin, Ibis*, 1859, p. 364; *Seebohm, Brit. Birds*, iii. p. 468, pl. 39 (1885); *id. Birds Japan. Emp.* p. 367 (1890).

(<i>O. Salvin</i>). | Salvin-Godman Coll. |

Order COLYMBIFORMES.

Family COLYMBIDÆ.

The eggs of the Divers are coarse in texture, but have a fair amount of gloss. They are typically of a narrow oval shape, but long cylindrical or biconical specimens, with both ends quite alike, are not uncommon.

The eggs of all *Colymbidæ* resemble each other very closely, and size is the only character of any assistance in discriminating them.

The ground-colour varies considerably, ranging through dark olive-brown, umber-brown and russet-brown, to dark stone-colour or dull greenish grey.

The eggs are double-spotted. The underlying or shell-markings are inconspicuous small spots of a purplish grey or pale brown. The surface-markings, consisting of spots and blotches, are inky purple, purplish brown, or even black. These are not usually of any great size, nor are they very thickly spread over the shell. They are, in most cases, distinct and well-defined, and they are often more numerous round the larger end than elsewhere. On a few examples the markings at the larger end have a streaky appearance.

Genus COLYMBUS, Linn.

Colymbus septentrionalis, Linn.

Colymbus septentrionalis, Thien. *Fortpflanz. ges. Vög.* tab. vic. fig. 1, a c (1845-54); *Baedeker, Eier Eur. Vög.* tab. 58. fig. 3 (1855-63); *Hewitson, Eggs of Brit. Order SPHENISCIFORMES.

The eggs of the Penguins are alike in colour and texture, and differ only with respect to size and shape.

The shell is coarse and rough, and frequently covered, wholly or in part, with a thin coat of calcareous matter. As incubation proceeds, many examples become quite smooth and also highly glossy.

The eggs of these birds are unspotted white, but, when freshly laid, they possess a distinct tinge of pale blue, and with incubation they often turn yellow.

In shape, they vary greatly. Those of many species are spheroidal. Others are of a broad oval form and, in one species at least, they are decidedly pyriform.

A remarkable fact concerning the Penguins is that birds apparently of the first year lay very small eggs and birds of the second year somewhat larger ones. It is only in the third year, or perhaps even later, that they lay full-sized eggs.

Family SPHENISCIDÆ.

Genus **APTENODYTES**, *Forst.***Aptenodytes patagonica**, *Forst.*

Aptenodytes patagonica, *Thien. Fortpflanz. ges. Vög.* tab. c. fig. 2 (1845-54).

Aptenodytes longirostris, *Sharpe, Phil. Trans.* 168. p. 152 (1879); *Scl. & Salv. Zool. 'Challenger' Exped.* ii. pt. viii. p. 122 (1880); *Scl. t. c.* p. 151 (1880); *Buller, Birds New Zeal.* 2nd ed. ii. p. 306 (1888).

Aptenodytes patagonica, *Layard, Ibis*, 1867, p. 459; *Grant, Cat. Birds B. M.* xxvi. p. 627 (1898); *Sharpe, Hand-l.* i. p. 117 (1899).

The two eggs of the King Penguin in the Collection are pyriform, and measure 4.35 by 3 and 4.25 by 2.95 respectively.

Genus **CATARRHACTES**, *Briss.***Catarrhactes chrysocome** (*Forst.*).

- Aptenodytes chrysocome*, *Thien. Fortpflanz. ges. Vög.* tab. c. fig. 4 (1845-54); *Abbott, Ibis*, 1860, p. 337.
Eudyptes nigrivestis, *Abbott, Ibis*, 1861, p. 163.
Eudyptes saltator, *Sharpe, Phil. Trans.* 168. p. 160 (1879); *Saunders, t. c.* p. 165 (1879).
Eudyptes chrysocome, *Sci. & Salv. Zool. 'Challenger' Exped.* ii. pt. viii. p. 128 (1880); *Sci. t. c.* p. 152 (1880); *Buller, Birds New Zeal.* 2nd ed. ii. p. 290 (1888); *Hall, Ibis*, 1900, p. 32.
Catarrhactes chrysocome, *Grant, Cat. Birds B. M.* xxvi. p. 635 (1898); *Sharpe, Hand-l.* i. p. 118 (1899).

The eggs of the Tufted Penguin vary much in shape. Some are spheroidal, and others are of a short but broad oval form. Two examples, however, are long and narrow, tapering to a point. The smallest egg measures 1·63 by 1·38. Full-sized specimens vary from 2·4 to 2·95 in length, and from 1·7 to 2·2 in breadth.

Catarrhactes chrysolophus (*Brandt*).

- Eudyptes chrysolophus*, *Abbott, Ibis*, 1860, p. 338; 1861, p. 163; *Sci. & Salv. Zool. 'Challenger' Exped.* ii. pt. viii. p. 127 (1880); *Sci. t. c.* p. 152 (1880).
Aptenodytes, sp. inc.*, *Sci. Zool. 'Challenger' Exped.* ii. pt. viii. p. 151 (1880).
Catarrhactes chrysolophus, *Grant, Cat. Birds B. M.* xxvi. p. 641 (1898); *Sharpe, Hand-l.* i. p. 118 (1899).

The eggs of the Macaroni Penguin are broad ovals with a tendency, in some cases, to the pyriform.

The specimens procured by the 'Challenger' expedition on Kerguelen Island are all undersized, the smallest measuring 2·4 by 1·8. Full-sized examples measure from 3 to 3·45 in length, and from 2·2 to 2·5 in breadth. They are consequently very much larger than those of *C. chrysocome*.

| 2. Falkland Islands. | Voy. H.M.S. 'Challenger.' |

Order PROCELLARIIFORMES.

The eggs of the Petrels are white, frequently tinged, when fresh and clean, with very pale blue. Those of many species are without markings of any kind; in those of others one end is speckled and spotted with rufous so as to form a cap or zone, and the markings often extend over a considerable portion of the shell. They are usually without gloss, and in no case is there more than a very slight amount of this. The shell is, as a rule, slightly rough and somewhat chalky, but the eggs of some species are fairly smooth. They vary much in shape.

Family PROCELLARIIDÆ.

Sub-Family PROCELLARIINÆ.

Genus PROCELLARIA, Linn.

Procellaria pelagica, Linn.

Procellaria pelagica, Thien. *Fortpflanz. ges. Vög.* tab. xcii. fig. 8 (1845-54); Baird, Brewer & Ridgw. *Water Birds N. Am.* ii. p. 403 (1884); Seebohm, *Brit. Birds*, iii. p. 438, pl. 56 (1885); *id.* *Eggs of Brit. Birds*, p. 74, pl. 20. fig. 4 (1896); Salvin, *Cat. Birds B. M.* xxv. p. 343 (1896); Sharpe, *Hand-l.* i. p. 120 (1899).

Thalassidroma pelagica, Baedeker, *Eier Eur. Vög.* tab. 55. fig. 3 (1855-63); Hewitson, *Eggs of Brit. Birds*, ii. p. 517, pl. cxlv. fig. i (1856); Dresser, *Birds Eur.* viii. p. 491 (1874).

The eggs of the Stormy Petrel are usually truly elliptical, but in some specimens one end is slightly pointed. They are without gloss, white, and marked with a zone or cap of minute red dots at one end. Occasionally the dots extend over the whole shell, and sometimes they are entirely absent. They measure from 1 to 1·2 in length, and from ·73 to ·9 in breadth.

 3. San Benito Island, 12th July. A. W. Anthony, Esq. [P.].
 1. San Benito Island, 27th July (*A. W. Salvin-Godman Coll.*
Anthony).

* A label accompanying this egg ascribes it to *O. socorroensis*, but obviously by an oversight.

Sub-Family OCEANITINÆ.

Genus OCEANITES, *Keys. & Blas.**Oceanites oceanica* (Kuhl).

(Plate XI. fig. 7.)

Oceanites oceanicus, *Dresser, Birds Eur.* viii. p. 505 (1878); *Sharpe, Phil. Trans.* 168. p. 132 (1879); *Legge, Birds Ceyl.* p. 1056 (1880); *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 416 (1884); *Salvin, Cat. Birds B. M.* xxv. p. 358 (1896); *Hall, Ibis*, 1900, p. 19.

Procellaria oceanica, *Saunders, Phil. Trans.* 168. p. 164 (1879).

Oceanites wilsoni, *Seebohm, Brit. Birds*, iii. p. 449 (1885).

Oceanites oceanica, *Sharpe, Hand-l.* i. p. 122 (1899).

The eggs of Wilson's Petrel are of an elliptical form. They are white, sprinkled with numerous pink specks and dots which sometimes form a broad zone round one end, or are sometimes distributed over one half of the egg, or evenly scattered over the whole shell. They measure from 1·28 to 1·32 in length, and from ·9 to ·94 in breadth.

2. Kerguelen Island, 11th Feb. (*A.E.E.*) Royal Society [P.].

Genus GARRODIA, *Forbes.**Garrodia nereis* (Gould).

Procellaria nereis, *Campbell, Nests & Eggs Austr. Birds*, p. 70, fig. 645 (1883).

Garrodia nereis, *Buller, Birds New Zeal.* 2nd ed. ii. p. 247 (1888); *Forbes, Ibis*, 1893, p. 542, pl. xiv. fig. 3; *Salvin, Cat. Birds B. M.* xxv. p. 361 (1896); *Sharpe, Hand-l.* i. p. 122 (1899).

The single egg of the Grey-backed Petrel in the Collection closely resembles some of the eggs of *Oceanites oceanica*. It is white sprinkled all over with pink dots which also form a cap at one end. It measures 1·3 by ·95.

1. Chatham Islands. H. O. Forbes, Esq. [P.]

Genus PELAGODROMA, *Reichenb.**Pelagodroma marina* (Lath.).

Procellaria marina, *Thien, Fortpflanz. ges. Vög.* tab. xcii. fig. 10 (1845-54).

Pelagodroma marina, *Buller, Birds New Zeal.* 2nd ed. ii. p. 248 (1888); *Forbes, Ibis*, 1893, p. 542; *Grant, Ibis*, 1896, p. 51; *Salvin, Cat. Birds B. M.* xxv. p. 362 (1896); *Dresser, Birds Eur.* ix. (*Suppl.*) p. 399 (1896); *Sharpe, Hand-l.* i. p. 122 (1899).

The eggs of the White-faced Petrel are of an elliptical or of a

very broad oval form. They are white, sprinkled with minute dots of pink and purple which often form a cap or zone at one end of the egg. They measure from 1·32 to 1·5 in length, and from 1 to 1·08 in breadth.

The three eggs of Garnot's Diving Petrel in the Collection measure respectively: 1·55 by 1·22; 1·55 by 1·25; 1·61 by 1·3.

1. Kerguelen Island. Voy. H.M.S. 'Challenger.'
2. Falkland Islands. Voy. H.M.S. 'Challenger.'

Family DIOMEDEIDÆ.

The eggs of the Albatrosses are coarse in texture and without gloss. They are usually of an elongated oval form with the smaller end compressed and very often abruptly enlarged at the tip. They vary from dull white to pale yellow in colour, and the broad end is usually covered with a profusion of reddish-brown specks and dots which form a cap. These markings also frequently extend over a considerable portion of the shell.

Genus **DIOMEDEA**, Linn.**Diomedea exulans**, Linn.

Diomedea exulans, Thien. *Fortpflanz. ges. Vög.* tab. xcii. fig. 1 (1845-54); *Baedeker, Eier Eur. Vög.* tab. 80. fig. 2 (1855-63); *Gould, Handb. Birds Austr.* ii. p. 427 (1865); *Layard, Ibis*, 1867, p. 460; *Bree, Birds Eur.* 2nd ed. v. p. 90, pl. — (1876); *Baird, Brewer, & Ridgw. Water Birds N. Order **ALCIFORMES**.

The eggs of the birds of this Order vary much both in shape and coloration. Some are white, but others can hardly be equalled for richness and variety of colour by the eggs of any other birds. In all cases they are very large and quite out of proportion to the size of the bird.

Family **ALCIDÆ**.Subfamily **ALCINÆ**.Genus **PLAUTUS**, *Brünnich*.**Plautus impennis** (*Linn.*).

- Alca impennis*, *Thien, Fortpflanz. ges. Vög.* tab. ivc. (1845-54); *Baedeker, Eier Eur. Vög.* tab. 70. fig. 3 (1855-63); *Hewitson, Eggs of Brit. Birds*, ii. p. 469, pl. cxxix. (1856); *Dresser, Birds Eur.* viii. p. 563 (1880); *Seebohm, Brit. Birds*, iii. p. 371, pls. 40 & 41 (1885); *Grieve, The Great Auk or Garefowl, passim* (1885); *Seebohm, Eggs of Brit. Birds*, p. 91, pls. 27, 28 (1896).
- Plautus impennis*, *Baird, Brewer & Ridgw., Water Birds N. Am.* ii. p. 467 (1884); *Grant, Cat. Birds B. M.* xxvi. p. 563 (1898); *Sharpe,*

Hand-l. i. p. 130 (1899); *Bidwell, Bull. Brit. Orn. Club*, x. p. xxxiii (1899).

The British Museum possesses two eggs of the Great Auk. These two examples were glued down to boards and exposed to view in the general gallery for many years; they are consequently bleached and valueless.

Their history is doubtful, and I quote Mr. Symington Grieve's account (*tom. cit.*, App. p. 29) of these two specimens:—"British Museum. These two eggs probably come from Bullock's collection. At the sale of Bullock's collection in 1819, two eggs were included in the catalogue (one at p. 31 and the other at p. 131). Both were bought by Leach, then keeper of the Zoological portion of the British Museum, and these are presumably the two eggs now in the Museum. One of them was actually packed in the same box in which Bullock's bird from Papa Westra was; but that does not necessarily lead to the conclusion that the egg came from Papa Westra. To judge from its age, Newfoundland is probably the place of its origin. According to other accounts, these two eggs originally belonged to Sir Hans Sloane, all of whose collections became part of the British Museum."

One of these, in fairly good order, measures 4.6 by 2.9. The second one, a good deal broken but admitting of accurate measurement, measures 4.72 by 2.83. Both are broad ovals, inclining to the pyriform.

The ground-colour is a dull creamy white, the shell rough and without gloss. In one specimen the markings, which consist of large, more or less confluent, dark brown blotches, are collected chiefly at the larger end, forming a cap; in the second the markings are spread over the whole shell, the larger ones, however, being confined to the broad end, where they do not form a distinct cap as in the first egg, but rather an irregular zone.

There are also casts of four eggs as noted below*.

2. Of uncertain origin.

Old Collection.

Genus *ALCA*, Linn.

Alca torda, Linn.

Alca torda, Thien. *Fortpflanz. ges. Vög.* tab. iiii. fig. 3, a-g (1845-54); *Baedeker, Eier Eur. Vög.* tab. 15. fig. 2 (1855-63); *Hewitson, Eggs of Brit. Birds*, ii. p. 468, pl. cxxviii. (1856); *Dresser, Birds Eur.* viii. p. 557 (1877); *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 472 (1884); *Seebohm, Brit. Birds*, iii. p. 375, pl. 42 (1885); *id. Eggs of Brit. Birds*, p. 92, pl. 24. figs. 1-4 (1896); *Dixon, Ibis*, 1885, p. 90; *Grant, Cat. Birds B. M.* xxvi. p. 565 (1898); *Sharpe, Hand-l.* i. p. 130 (1899).

-
- * 1. Cast of egg in the collection of Prof. A. Newton.
 1. Cast of egg formerly in the collection of Mr. A. Troughton, of Coventry.
 1. Cast of egg in the collection of Mr. A. J. Wolley, and formerly in the possession of Mr. Gould.
 1. Cast of egg from the collection of Mr. Yarrell.

The eggs of the Razorbill are generally regular ovals: occasionally specimens may be found with the two ends of much the same size. The shell is coarse, rather rough to the touch, and without any gloss. The ground-colour varies very greatly: white, pale blue, pink, stone-colour, yellow and reddish brown being the more prevalent tints. The markings vary from small specks to huge blotches, and are dark reddish brown, approaching, in many cases, to black. Some examples are marked entirely with specks; others with blotches, which have a tendency to be confluent round the larger end, and between these two types every variation may be found. The dimensions range from 2·7 to 3·1 in length, and from 1·72 to 1·95 in breadth. Three abnormally large eggs from Bempton, however, measure from 3·6 to 3·75 in length, and from 2·15 to 2·2 in breadth.

Arctica alle, *Hewitson, Eggs of Brit. Birds*, ii. p. 465, pl. cxxvii. fig. i (1856).

Alle nigricans, *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 463 (1884).

Alle alle, *Grant, Cat. Birds B. M.* xxvi. p. 569 (1898); *Sharpe, Hand-l.* i. p. 130 (1899).

The eggs of the Little Auk are very regular ovals, fairly smooth to the touch, but without any gloss. They are of a pale greenish blue, most frequently unmarked. A few specimens, however, exhibit some specks of yellowish brown and sometimes also some streaks and markings of the same colour round the larger end. They measure from 1.75 to 2.07 in length, and from 1.28 to 1.35 in breadth.

Genus URIA, *Briss.*

Uria troile (*Linn.*).

Uria ringvia, *Thien. Fortpflanz. ges. Vög.* tab. iic. fig. 1, a-c (1845-54); *Baedeker, Eier Eur. Vög.* tab. 69. fig. 1 (1855-63).

Uria troile, *Thien. Fortpflanz. ges. Vög.* tab. iic. fig. 2, a-f (1845-54); *Hewitson, Eggs of Brit. Birds*, ii. p. 455, pl. cxxiv. (1856); *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 477 (1884); *Dixon, Ibis*, 1885, p. 89; *Grant, Cat. Birds B. M.* xxvi. p. 573 (1898); *Sharpe, Hand-l.* i. p. 130 (1899).

Uria lomvia, *Baedeker, Eier Eur. Vög.* tab. 15. fig. 1 (1855-63).

Alca troile, *Dresser, Birds Eur.* viii. p. 567 (1877); *Seeböhm, Brit. Birds* iii. p. 388, pls. 43 & 44 (1885); *id. Eggs of Brit. Birds*, p. 93, pl. 25 figs. 1-6 (1896).

The eggs of the Common Guillemot are of a long, narrow oval form, tapering to the small end, which is not unfrequently enlarged or swollen. The shell is rough in texture and without gloss.

They vary greatly in colour. The ground is of different shades of blue, green, brown, yellow, pink or buff, and frequently it is white. The underlying markings consist of blotches of grey or pale purple and are seldom prominent. The surface-markings, consisting of blotches, spots, streaks and lines of every conceivable shape, are of different shades of brown, reddish brown, chocolate and yellowish brown, and in many cases they are almost of a deep black. These markings are frequently of great extent and cover quite three-quarters of the surface of the shell; at other times they are merely spots, leaving almost the entire ground visible. Not a few examples are covered with a close entanglement of lines which produces a beautiful effect.

The magnificent series of eggs of this species in the Collection was arranged in groups by the late Mr. Seebohm and represents some thirty types or variations of coloration.

The eggs vary from 3 to 3·5 in length, and from 1·8 to 2 in breadth. Specimens of abnormal size are not included in these measurements. The smallest egg in the Collection measures 1·5 by 1·12.

Genus **CEPPHUS**, *Pall.*

Cepphus grylle (*Linn.*).

Uria grylle, *Thien. Fortpflanz. ges. Vög.* tab. iiii. fig. 1, a-e (1845-54); *Hewitson, Eggs of Brit. Birds*, ii. p. 462, pl. cxxvi. (1856); *Dresser, Birds Eur.* viii. p. 581 (1877); *Grant, Cat. Birds B. M.* xxvi. p. 580 (1898).

Grylle columba, *Baedeker, Eier Eur. Vög.* tab. 70. fig. 1 (1855).

Cepphus grylle, *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 492 (1884); *Sharpe, Hand-l.* i. p. 131 (1899).

Alca grylle, *Seebohm, Brit. Birds*, iii. p. 383, pl. 45 (1885); *id. Eggs of Brit. Birds*, p. 94, pl. 26. fig. 4 (1896).

It is possible that some of the eggs enumerated below may appertain to the closely allied race or species, *C. mantzi*, but there is no evidence to determine this.

The eggs of the Black Guillemot are quite different from those of *Uria troile*. They are of a regular broad oval form, slightly rough, and they possess a small amount of gloss. The ground-colour varies from a creamy white to pale blue pink or pinkish buff. The markings, which consist of spots and blotches, are pretty evenly distributed over the shell and are of a deep brown, black, yellowish brown or chocolate colour. In addition, there are underlying pale purple markings. Not unfrequently the markings form a confluent broad zone round the larger end. Specimens measure from 2.1 to 2.55 in length, and from 1.4 to 1.7 in breadth.

Genus **FRATERCULA**, *Briss.***Fratercula arctica** (*Linn.*).

Alca arctica, *Thien. Fortpflanz. ges. Vög.* tab. vc. fig. 7, a-e (1845-54).

Fratercula arctica, *Baedeker, Eier Eur. Vög.* tab. 80. fig. 6 (1855-63);
Hewitson, Eggs of Brit. Birds, ii. p. 466, pl. cxxvii. fig. ii (1856);
Dresser, Birds Eur. viii. p. 599 (1877); *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 524 (1884); *Seebohm, Brit. Birds*, iii. p. 364, pl. 45 (1885); *id. Eggs of Brit. Birds*, p. 96, pl. 26. figs. 1, 2 (1896); *Dixon, Ibis*, 1885, p. 91; *Grant, Cat. Birds B. M.* xxvi. p. 616 (1893); *Sharpe, Hand-l.* i. p. 133 (1899).

The eggs of the Puffin are of a rather pointed oval form, rough, chalky, and without gloss. The ground is white or bluish white, and this is spotted and blotched with pale purple or grey, and frequently it is also marked with some yellowish-brown spots and streaky scrawls. In some specimens, the markings are larger and more prominent than in others. Some examples have so few markings, and these are so small, that until closely examined they appear to be of a spotless white. With incubation, the shell becomes of a dark mahogany-brown colour. They measure from 2.15 to 2.7 in length, and from 1.55 to 1.75 in breadth.

Order LARIFORMES.

The identification of the eggs of the Terns, Gulls and Skuas presents great difficulties, and they should always be particularly well authenticated at the time they are taken from the nest.

The eggs of the *Lariformes* are usually of a regular oval form, but numerous specimens depart from this, and are spheroidal, pyriform or elliptical. The shell is slightly rough and seldom exhibits any gloss. The markings are invariably of two kinds: the surface-markings, which are usually of some shade of brown or occasionally black; and the shell-markings underlying the others, which are usually of a pale purple colour.

The eggs of the *Lariformes* in some instances resemble those of some species of the *Ralliformes*, and in others those of many species of the *Charadriiformes*.

Family LARIDÆ.**Sub-Family STERNINÆ.****Genus HYDROCHELIDON, Boie.****Hydrochelidon leucoptera (Meisn. & Schinz).**

- Sterna leucoptera*, Thien. *Fortpflanz. ges. Vög.* tab. lxxxv. fig. 4, a-f (1845-54); Seebohm, *Brit. Birds*, iii. p. 257, pl. 49 (1885); *id.* *Eggs of Brit. Birds*, p. 98, pl. 29. figs. 4, 6 (1896).

Hydrochelidon hybrida, *Baedeker, Eier Eur. Vög.* tab. 32. fig. 1 (1855-63); *Saunders, Ibis*, 1871, p. 399; *Dresser, Birds Eur.* viii. p. 315 (1877); *Legge, Birds Ceyl.* p. 996 (1880); *North, Nests & Eggs Austr. Birds*, pp. 353, 402 (1880); *Irby, Orn. Str. Gibr.* 2nd ed. p. 292 (1895); *Saunders, Cat. Birds B. M.* xxv. p. 10 (1896); *Sharpe, Hand-l.* i. p. 133 (1899).

The eggs of the Whiskered Tern are generally of a regular oval shape, and pyriform examples are comparatively few in number. The ground varies from cream-colour to buff, and about half the number of the specimens in the Collection are distinctly tinged with green. The markings, which consist of spots and small blotches, are of a reddish-brown or blackish-brown colour, and they cover about one-quarter of the surface of the shell. The underlying markings are dull grey or pale purplish brown. The eggs vary from 1·39 to 1·65 in length, and from 1·02 to 1·2 in breadth.

The eggs of the Black Tern vary from a pointed oval form to pyriform. The ground-colour ranges from pale buff to brownish buff, and this is heavily blotched and spotted with reddish brown and blackish brown. With few exceptions, these markings cover quite half the surface of the shell and are often confluent, especially over the broader half. The underlying markings are numerous and of a dull grey colour. Specimens measure from 1.3 to 1.46 in length, and from .9 to 1.05 in breadth.

Genus *PHAËTHUSA*, *Wagler*.

Phaëthus magnirostris (*Licht.*).

(Plate XIII. fig. 8.)

- Sterna magnirostris*, *Thien. Fortpflanz. ges. Vög.* tab. lxxxii. fig. 6 (1845-54).
Thalasseus magnirostris, *Sci. & Salv. P. Z. S.* 1866, p. 200.
Phaëthus magnirostris, *Sci. & Huds. Argent. Orn.* ii. p. 194 (1889); *Saunders, Cat. Birds B. M.* xxv. p. 23 (1896); *Sharpe, Hand-l.* i. p. 134 (1899).

The eggs of the Great-billed Tern resemble many of those of the Gull-billed Tern. They are of a broad oval or elliptical shape. The ground is of a yellowish-buff colour, and it is marked, pretty evenly all over, with spots and small blotches of yellowish brown and pale purple. On some specimens the markings consist of short thick lines and scrawls. The eleven examples measure from 1.73 to 1.97 in length, and from 1.35 to 1.41 in breadth.

(*E. Bartlett*).

Genus **GELOCHELIDON**, *Brehm*.

Gelochelidon anglica (*Mont.*).

Sterna anglica, *Thien. Fortpflanz. ges. Vög.* tab. lxxxii. fig. 7, a-i (1845-54); *Saunders, Ibis*, 1871, p. 398; *Dresser, Birds Eur.* viii. p. 295 (1877); *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 277 (1884); *Seebohm, Brit. Birds*, iii. p. 263, pl. 47 (1885); *North, Nests & Eggs Austr. Birds*, p. 355, pl. xvii. fig. 2 (1889); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 304 (1890); *Sharpe, Ibis*, 1891, p. 116; *Holland, Ibis*, 1892, p. 212; *Seebohm, Eggs of Brit. Birds*, p. 99, pl. 31. figs. 6, 8 (1896).

Gelochelidon anglica, *Baedeker, Eier Eur. Vög.* tab. 24. fig. 3 (1855-63); *Salvin, Ibis*, 1859, p. 364; *Saunders, Cat. Birds B. M.* xxv. p. 25 (1896); *Sharpe, Hand-l.* i. p. 134 (1899).

The eggs of the Gull-billed Tern are broad ovals, sometimes slightly pointed at the small end. The ground varies from a greyish or buffish white to a pale buff, stone-colour or brown. The markings are of small size and are, as a rule, evenly distributed over the shell. They consist of spots and blotches of dark brown or olive-brown and very prominent underlying grey.

The above description applies to eggs from the Old World and N. America. Those taken in South America are more varied, the ground being frequently tinged with pale yellow, pale green or pale blue, and the markings being much larger and consisting, very often, of coarse blotches and streaks. They vary from 1.8 to 2.2 in length, and from 1.3 to 1.57 in breadth.

The eggs of the Caspian Tern are very much larger than the eggs of the Gull-billed Tern, but resemble them closely in shape and coloration. They pass through the same variations as the eggs of that species taken in Europe and Asia. Specimens measure from 2.3 to 2.75 in length, and from 1.7 to 1.9 in breadth.

Genus **SEENA**, *Blyth*.*Seena seena* (*Sykes*).

(Plate XIII. fig. 7.)

Sterna seena, *Legge, Birds Ceyl.* p. 1003 (1880); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 308 (1890).

Seena aurantia, *Saunders, Cat. Birds B. M.* xxv. p. 37 (1896).

Seena seena, *Sharpe, Hand-l.* i. p. 134 (1899).

The eggs of the Indian River-Tern are of a very broad oval form, extremely blunt at the smaller end, and frequently almost elliptical in shape. The ground varies, being sometimes a greenish grey or pale greenish stone-colour, and at other times a pale buff or dark cream-colour, occasionally tinged with pink or with olivaceous. The markings, which are deep brown of one shade or another, consist of small blotches, spots, short lines and irregular streaks, and are fairly evenly distributed over the shell. In a small proportion of the specimens, the blotches are large, coarse, and few in number. The underlying markings consist of clouds and spots of pale purple. The eggs measure from 1.5 to 1.75 in length, and from 1.17 to 1.32 in breadth.

The eggs of the Black-bellied Tern are broad, pointed ovals. The ground varies from cream-colour to buff, sometimes tinged with very pale green. The markings are small and consist of specks, streaks and spots of yellowish brown, chocolate-brown and, in some cases, of black. These are somewhat sparingly distributed over the whole shell. The underlying markings are large, conspicuous, and of a pale purple colour. Two examples in the Collection are of a plain, unspotted, pale blue. Specimens vary from 1.1 to 1.5 in length, and from .88 to 1.02 in breadth.

The large series of eggs of the Common Tern embraces almost every type to be found amongst the eggs of the Terns. They vary in shape from broad, blunt ovals to pointed ovals and some examples are pyriform. The ground-colour varies from a pale greenish white or bluish white to different shades of buff. The markings, consisting of spots and blotches of blackish brown and underlying grey or pale purple, are distributed over the shell in an infinity of patterns. The eggs measure from 1·47 to 1·85 in length, and from 1·15 to 1·3 in breadth.

The eggs of the Arctic Tern are, on the whole, somewhat smaller than the eggs of the Common Tern. They do not, however, otherwise differ, and they are subject to the same variations of colour and shape. Among the specimens in the Collection are some which are of a pale bluish white, very sparingly dotted with dark brown, and one is quite unmarked. The eggs measure from 1·42 to 1·75 in length, and from 1·03 to 1·2 in breadth.

Sterna longipennis, *Nordm.*

(Plate XIV. fig. 4.)

Sterna longipennis, *Seebohm, Birds Japan. Emp.* p. 296 (1890); *La Touche, Ibis*, 1892, p. 503; *Saunders, Cat. Birds B. M.* xxv. p. 67 (1896); *Sharpe, Hand-l.* i. p. 135 (1899).

Of the three eggs of Nordmann's Tern* in the Collection, one is of a lengthened pointed oval form and the other two are broad ovals, but with the smaller end distinctly pointed. The ground is of a pale buff or greenish buff, and this is marked in the usual manner with blackish brown and pale purple. The specimens measure respectively: 1·6 by 1·1; 1·55 by 1·12; 1·5 by 1·12.

Sterna albigena, *Licht.*

(Plate XIV. fig. 5.)

Sterna senegalensis, *König-Warth. Ibis*, 1860, pp. 125, 432.

Sterna albigena, *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 311, footnote (1890); *Saunders, Cat. Birds B. M.* xxv. p. 69 (1896); *Sharpe, Hand-l.* i. p. 135 (1899).

The eggs of Lichtenstein's Tern are mostly of an oval form, with the smaller end pointed. The breadth of the egg varies a good deal in relation to the length, some examples being narrow and lengthened, and others being broad and short. The ground is typically of a warm creamy buff-colour, but sometimes it is whitish with a faint bluish tinge, and sometimes of a pale cream-colour. The markings are sparingly distributed over the shell and consist of spots and small blotches of various shades of brown, ranging from yellowish brown and chocolate-brown to blackish brown. There are also the usual pale purple underlying markings. Some specimens are nearly unmarked; others are marked with small dots only. They measure from 1·48 to 1·71 in length, and from 1·07 to 1·21 in breadth.

Sterna sandvicensis acufavida, *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 288 (1884).

The eggs of the Sandwich Tern vary from a pointed oval form to pyriform. The ground ranges from white, through cream-colour and pale buff, to brownish buff. The markings are very bold as a rule and consist of spots and blotches of dark brown approaching black, and underlying inky-purple. The size, shape, and distribution of the markings of both kinds present almost endless variations.

Some examples are delicately marked with only small spots ; others are marked with huge confluent blotches measuring quite an inch across, and between these two types every combination occurs. They measure from 1·9 to 2·15 in length, and from 1·3 to 1·55 in breadth.

Sterna maxima, Bodd.

(Plate XIV. fig. 7.)

Sterna maxima, Baird, *Brewer & Ridgw. Water Birds N. Am.* ii. p. 284 (1884) ; *Saunders, Cat. Birds B. M.* xxv. p. 80 (1896) ; *Dresser, Birds Eur.* ix. (Suppl.) p. 383 (1896) ; *Sharpe, Hand-l.* i. p. 135 (1899).

The eggs of the Great Tern are of a broad, pointed oval form. The ground varies from cream-colour to pale buff and is often tinged with pink. The surface-markings consist of spots and small blotches of deep chocolate or blackish brown, and these are almost invariably blurred and smudged at the margin. The underlying markings are of a pale purple colour and are also blurred and ill-defined. The markings of both kinds are equally, and not very thickly, distributed over the whole shell. The eggs measure from 2·45 to 2·55 in length, and from 1·65 to 1·8 in breadth.

M.* xxv. p. 86 (1896); *Sharpe, Hand-l. i.* p. 135 (1899).

The eggs of the Allied Tern are of a pointed oval form. The ground ranges from white, with a faint tinge of cream-colour, to pink and pinkish buff. The surface-markings consist of specks, spots and small blotches of blackish brown or black, and many of them are blurred and tinged with rufous at the margin. On some examples the markings consist entirely of small spots, in others small blotches are intermingled with the spots. In a small number the markings are very spare and consist of minute dots; and two or three specimens in the large series in the Collection are absolutely unmarked. The underlying markings consist of small clouds and blotches of very pale inky-purple. The eggs measure from 1.9 to 2.35 in length, and from 1.38 to 1.5 in breadth.

M.* xxv. p. 89 (1896); *Sharpe, Hand-l. i.* p. 136 (1899).

The eggs of the Large Crested Tern are the most varied and the most beautiful of all the eggs of the Terns, and it is impossible to give an adequate description of them. In shape they are broad ovals, strongly pointed at the small end. The ground is most usually cream-colour, but many eggs have the ground buff, ochraceous, reddish cream-colour, reddish buff, pale yellow, pale green, pale blue and salmon-pink, both pale and rich. The underlying markings are of a pale purple and are usually small and inconspicuous, but sometimes they consist of huge blotches, covering a considerable portion of the shell. The surface-markings are of a dark umber-brown or blackish brown, and many of them are

blurred at the margin, where they turn to reddish brown. They are of every possible size and shape, varying from specks to large blotches, smears and clouds. A characteristic of the eggs of this Tern are the hieroglyphic-like lines and scrawls which are found on a majority of the specimens. As in the case of the eggs of other Terns, some are very sparingly marked and a few are quite unmarked. They measure from 2.3 to 2.71 in length, and from 1.6 to 1.8 in breadth.

Sterna frontalis, Buller, *Birds New Zeal.* 2nd ed. ii. p. 68 (1888); *North, Nests & Eggs Austr. Birds*, p. 403 (1889); *Saunders, Cat. Birds B. M.* xxv. p. 97 (1896); *Sharpe, Hand-l.* i. p. 136 (1899).

The eggs of the White-fronted Tern in the Collection are of a regular oval form and of an olive-buff colour of different shades, speckled and blotched with dark umber-brown and underlying pale purple. The markings are small and distinct and are equally spread over the whole shell. Five specimens measure respectively: 1.8 by 1.27; 1.87 by 1.3; 2 by 1.44; 1.73 by 1.25; 1.76 by 1.26.

Sterna aleutica, Baird.

(Plate XIV. fig. 9.)

- Sterna aleutica*, Baird, *Brewer & Ridgw. Water Birds N. Am.* ii. p. 307 (1884); *Nelson, Report Nat. Hist. Alaska*, p. 59 (1887); *Saunders, Cat. Birds B. M.* xxv. p. 98 (1896); *Sharpe, Hand-l.* i. p. 136 (1899).

* This species is not included in the list of birds given by Macgillivray in the Narrative of the Voyage of H.M.S. 'Rattlesnake.'

The eggs of the Aleutian Tern are of an oval form, somewhat pointed at the small end. The ground-colour is olive-buff, and this is marked with spots and blotches of dark chocolate or blackish brown. On two examples, the blotches are more or less confluent over the whole shell; on a third, the blotches are smaller in size and chiefly confined to a broad irregular band round the larger end. The underlying markings are inconspicuous and of a pale purple colour. Three specimens measure respectively: 1.6 by 1.1; 1.57 by 1.17; 1.67 by 1.15.

1. Alaska (*Smiths. Inst.*). Saunders Coll.
2. Stewart Island, June (*Henshaw Coll.*). Salvin-Godman Coll.

Sterna lunata, Peale.

(Plate XIV. fig. 8.)

Sterna lunata, Lister, *P. Z. S.* 1891, p. 296; *Saunders, Cat. Birds B. M.* xxv. p. 100 (1896); *Sharpe, Hand-l.* i. p. 136 (1899).

The eggs of the Lunate Tern are of a broad, blunt oval form. The ground is of a creamy-white colour, very faintly tinged with pink, and this is pretty closely marked with well-defined small spots and blotches of reddish brown. The underlying markings, which are of a pale purple colour, are numerous and sometimes consist of large smears, but usually they are small. Four examples measure respectively: 1.53 by 1.17; 1.62 by 1.26; 1.7 by 1.22; 1.62 by 1.2.

The eggs of the Panayan Tern are usually of a blunt oval form, but some are rather pointed at the smaller end. The ground varies from cream-colour to rich pinkish buff, and this is marked with specks, spots and blotches of rich reddish brown. These markings are not very thickly distributed over the shell, nor are they of very large size, but they are distinct and sharply defined, and it is seldom that two or more markings are confluent. The underlying markings are of a pale purple colour and are seldom very

conspicuous. The eggs measure from 1·6 to 1·88 in length, and from 1·15 to 1·3 in breadth.

The eggs of the Sooty Tern are of much the same type as those of the Panayan Tern, but are somewhat larger; the surface-markings are coarser and of a brighter reddish brown, and they frequently blend together at the broad end, to form an irregular cap or zone; the ground is more persistently of a cream-colour, and comparatively few eggs are tinged with pink; the underlying markings are generally large and show up well. Specimens measure from 1·55 to 2·2 in length, and from 1·25 to 1·5 in breadth.

The eggs of the Fairy Tern are of a broad oval form, rather pointed at the small end. The ground varies from cream-colour to light buff, and this is marked all over with spots and small blotches of yellowish brown in some specimens, blackish brown in others. These markings are well-defined. The underlying clouds and spots are of a pale purple colour. Seven examples measure from 1·25 to 1·42 in length, and from 1 to 1·03 in breadth.

Sternula minuta, *Saunders, Ibis*, 1871, p. 399.

Sterna sinensis, *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 312, part. (1890).

The eggs of the Little Tern are of an oval shape, but decidedly pointed at the small end. The ground varies from very pale cream-colour to drab or buff, and this is rather thickly marked with spots and blotches of different shades of dark brown. The markings are generally bold, and some of the blotches are of large size. The underlying markings are of a pale inky-purple and are usually well developed. The dimensions vary from 1.15 to 1.3 in length, and from .85 to 1.05 in breadth.

Sterna saundersi, Hume.

(Plate XIV. fig. 2.)

Sterna saundersi, Legge, *Birds Ceylon*, p. 1023 (1880); *Saunders, Cat. Birds B. M.* xxv. p. 120 (1896); *Sharpe, Hand-l. i.* p. 136 (1899).
Sterna sinensis, Oates ed. Hume, *Nests & Eggs Ind. B.* iii. p. 312, part. (1890).

The eggs of the Black-shafted Little Tern are of a broad oval form, with the small end very slightly compressed. All the specimens in the Collection are very uniform in coloration, and although they can be matched by some of those of *S. minuta*, they are, as a rule, very recognizable. The ground is of a creamy-buff colour. The markings are very small, consisting of dots, streaks and lines, and there is seldom a mark which can be termed a blotch. Moreover, the markings are rather sparingly spread over the shell, and present a very delicate appearance. The surface-markings are yellowish brown, with occasionally a darker or blackish-brown spot, and the underlying ones are of a pale grey colour. In size the eggs do not differ from those of *S. minuta*.

Sterna superciliaris, Vieill.

(Plate XV. fig. 1.)

Sterna superciliaris, *Scl. & Salv. P. Z. S.* 1866, p. 200; *Scl. & Huds. Argent. Orn.* ii. p. 197 (1888); *Saunders, Cat. Birds B. M.* xxv. p. 124 (1896); *Sharpe, Hand-l.* i. p. 137 (1899).

The eggs of the Eyebrowed Tern are similar to many of those of *S. minuta*, the ground-colour being of a warm buff and the markings rather small and delicate. In fact, the markings are intermediate in size between those on the eggs of *S. minuta* and those of *S. saundersi*. Eight specimens vary from 1.17 to 1.23 in length, and from .91 to .95 in breadth.

6. Huallaga River, E. Peru, 21st July Saunders Coll.

Sterna melanauchen, Temm.

(Plate XV. fig. 3.)

Sterna melanauchen, *Thien. Fortpflanz. ges. Vög.* tab. lxxxii. fig. 2 (1845-54); *Macgillivray, Voy. 'Rattlesnake,'* ii. p. 358 (1852); *Gould, Handb. Birds Austr.* ii. p. 400 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 67, pl. —. fig. 606 (1883); *North, Nests & Eggs Austr. Birds*, p. 356 (1889); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 302 (1890); *Saunders, Cat. Birds B. M.* xxv. p. 126 (1896); *Sharpe, Hand-l.* i. p. 137 (1899).

The eggs of the Black-naped Tern are of an oval form, but somewhat sharply pointed at the smaller end. The ground-colour varies, being white, creamy white, pale buff or pinkish buff, and this is usually boldly marked with spots and blotches which vary in colour from yellowish brown to chocolate-brown, and are generally more frequent at the larger end than elsewhere. The underlying markings of pale purple are of large size and well-defined. Sometimes an example may be found which is marked with only a few dots. The eggs measure from 1.4 to 1.65 in length, and from 1.05 to 1.2 in breadth.

Sterna trudeaui, *Audub.*

(Plate XV. fig. 7.)

Sterna trudeaui, *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 290 (1884); *Holland, Ibis*, 1890, p. 428; 1892, p. 212; *Saunders, P. Z. S.* 1891, p. 373; *id. Cat. Birds B. M.* xxv. p. 130 (1896).
Sterna trudeaui, *Sharpe, Hand-l.* i. p. 137 (1899).

Of the three eggs of Trudeau's Tern in the Collection, two are of a long, narrow, oval form, and one is a broad, but pointed, oval. The ground-colour is olive-buff, and the surface-markings are of a chocolate or blackish-brown. In one example they consist chiefly of large smears and blotches; in the other two, of spots and small blotches, distinct and well defined. At the larger end there are a few scrolls and twisted lines. The underlying markings are of a pale purple colour. The three specimens measure respectively: 1·63 by 1·2; 1·82 by 1·17; 1·75 by 1·23.

Procelsterna cærulea, *Saunders, Cat. Birds B. M.* xxv. p. 133 (1896);
Sharpe, Hand-l. i. p. 137 (1899).

The eggs of the Blue Noddy are represented in the Collection by only three specimens. Of these, two are quite similar to the eggs of *P. cinerea* described below, but are smaller. The third is of a pinkish-buff colour marked with a very few scattered reddish-brown spots, except at the apex of the broad end, where the spots are thickly disposed and are intermingled with some hieroglyphic-like lines. The three eggs measure respectively: 1·4 by 1·07; 1·5 by 1·03; 1·48 by 1·03.

Procelsterna cinerea, *Saunders, Cat. Birds B. M.* xxv. p. 135 (1896);
Sharpe, Hand-l. i. p. 137 (1899).

The eggs of the Grey Noddy are of a broad oval or elliptical form. The ground is of a pinkish-cream colour, and this is very sparingly marked all over with specks, spots, and lines of yellowish brown and reddish brown. The underlying markings are of a pale purple colour and are very inconspicuous. In a few specimens the markings are rather thickly disposed over the larger end. Eleven examples vary from 1·62 to 1·72 in length, and from 1·15 to 1·3 in breadth.

Sharpe, Hand-l. i. p. 137 (1899).
The Noddy, *Salvin, Ibis*, 1864, p. 383.

The eggs of the Noddy are of a regular oval form. The ground varies from white to a pinkish stone-colour and is marked with various shades of reddish brown. The markings consist of spots and blotches and are often blurred at the margins. In some cases, these are sparingly scattered over the whole shell; in others they are more frequent at the larger end than elsewhere, where they form a cap or zone. Occasionally an example is boldly blotched all over, and sometimes the markings are almost entirely absent. The underlying markings are of a pale purple colour. The eggs measure from 1·9 to 2·3 in length, and from 1·3 to 1·55 in breadth.

Anous ridgwayi, Anthony.

(Plate XV. fig. 6.)

Anous stolidus ridgwayi, Anthony, *Auk*, 1898, p. 36; *Sharpe, Hand-l. i.* p. 137 (1899).

The three eggs of Ridgway's Noddy contained in the Collection are remarkable for their very feeble coloration. The ground is white or of a very pale cream-colour. At the larger end of each egg there is a cluster of spots and small blotches of rusty brown, but elsewhere the surface-markings are almost absent, consisting of only a few small spots widely scattered. The underlying markings of very pale purple are more evenly distributed over the whole shell. The three examples measure respectively: 2.04 by 1.43; 2.1 by 1.45; 2.1 by 1.44.

| 3. Socorro Island, 12th May. | A. W. Anthony, Esq. [P.]. |
|------------------------------|---------------------------|

Anous galapagensis, Sharpe.

(Plate XV. fig. 5.)

Anous galapagensis, Saunders, *Cat. Birds B. M.* xxv. p. 143 (1896); *Sharpe, Hand-l. i.* p. 137 (1899).

Anous stolidus galapagensis, Rothsch. & Hartert, *Nov. Zool.* vi. p. 191 (1899).

The eggs of the Galapagos Noddy are smaller than the majority of those of *A. stolidus*, but do not otherwise differ. The six specimens contained in the Collection can be easily matched by eggs of that species. They measure from 1.85 to 2.01 in length, and from 1.3 to 1.35 in breadth.

Genus **MICRANOUS**, *Saunders*.

Micranous tenuirostris (*Temm.*).

- Anous melanops, *Gould, Handb. Birds Austr.* ii. p. 417 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 68 (1883).
- Anous tenuirostris, *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* ii. p. 665, pl. 308. fig. 3 (1885); *North, Nests & Eggs Austr. Birds*, p. 359 (1889).
- Micranous tenuirostris, *Saunders, Cat. Birds B. M.* xxv. p. 144 (1896); *Sharpe, Hand-l.* i. p. 138 (1899).

The only egg of the Lesser Noddy in the Collection is of a remarkably long and narrow shape. It is cream-coloured, sparingly marked (except at the broad end, where the markings are rather thickly disposed), with spots and tiny blotches of chocolate-brown. The underlying markings are of a pale purple colour. It measures 1.92 by 1.2.

1. Seychelles (*Paris Museum*). Saunders Coll.

Micranous leucocapillus (*Gould*).

- Anous tenuirostris, *Salvin, Ibis*, 1864, p. 383.
- Anous leucocapillus, *Gould, Handb. Birds Austr.* ii. p. 419 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 68, pl. —. fig. 615 (1883).
- Anous melanogenys, *Crowfoot, Ibis*, 1885, p. 264; *MacFarlane, Ibis*, 1887, p. 214; *North, Nests & Eggs Austr. Birds*, p. 376, pl. xxi. fig. 5 (1889).
- Micranous leucocapillus, *Saunders, Cat. Birds B. M.* xxv. p. 145 (1896); *Sharpe, Hand-l.* i. p. 138 (1899).

The eggs of the White-capped Noddy are mostly of a broad oval form, but some are quite elliptical. The ground varies from nearly pure white to cream-colour and pale pink. The markings on nearly all the eggs are confined to the larger end, but in a few they are evenly spread over the whole shell. The surface-markings, which vary in size from specks and spots to huge blotches, are of a deep reddish brown or chocolate-brown, and with these are sometimes intermingled some lines and comma-like dashes. The underlying markings are of a pale purple colour, few and inconspicuous. Feebly marked examples are not uncommon, the markings consisting of only a few dots. The eggs measure from 1.65 to 1.95 in length, and from 1.2 to 1.32 in breadth.

Genus **GYGIS**, Wagler.**Gygis alba** (Sparrm.).

Gygis candida, Gould, *Handb. Birds Austr.* ii. p. 405 (1865); *Milne-Edwards & Grandidier, Hist. Nat. Madag., Ois.* ii. p. 660, pl. 308. figs. 5, 5 a (1885); *Crowfoot, Ibis*, 1885, p. 266; *North, Nests & Eggs Austr. Birds*, p. 374, pl. xxi. fig. 4 (1889); *Lister, P. Z. S.* 1891, p. 297; *Saunders, Cat. Birds B. M.* xxv. p. 149 (1896).
Gygis alba, Sharpe, *Hand-l.* i. p. 138 (1899).

The eggs of the White Tern are more uniformly elliptical in shape than those of any other member of this Family. The ground varies and is dull white, cream-colour, stone-colour or pale buff. The markings are of an extraordinary character, consisting of scrolls, lines, specks, spots and blotches, thickly spread over the egg, and forming a very handsome pattern. The surface-markings vary from pale yellowish brown to brown and blackish brown, and the underlying markings are of a pale purple colour. In some examples the markings, although everywhere dense, are still more crowded at the larger end and form a zone. Numerous specimens vary from 1·52 to 1·8 in length, and from 1·17 to 1·32 in breadth.

Sub-Family RHYNCHOPINÆ.

Genus **RHYNCHOPS**, Linn.**Rhynchops nigra**, Linn.

(Plate XV. fig. 8.)

Rhynchops nigra, Thien, *Fortpflanz. ges. Vög.* tab. lxxxii. fig. 1 (1845-54);
Baird, Brewer & Ridgw. Water Birds N. Am. ii. p. 192 (1884);
Saunders, Cat. Birds B. M. xxv. p. 153 (1896); *Sharpe, Hand-l.* i.
 p. 138 (1899).

The eggs of the Black Skimmer vary from a long and narrow to a broad pointed, oval form. The ground varies from cream-colour to

* These eggs may possibly be those of the closely allied *G. kittlitzi*, Hartert, but no specimen of the bird from the Phoenix Islands is available for examination.

very pale buff, and is sometimes tinged with pink. The markings consist of spots and blotches of most irregular shape, and two or more are often confluent, forming a huge patch. Most of the markings are blackish brown, frequently turning to pale chestnut or red at the edges; some are entirely reddish brown. The underlying markings are of an inky-purple colour and are of the same size and disposition as the surface-markings. The eggs measure from 1.6 to 1.95 in length, and from 1.2 to 1.35 in breadth.

Rhynchops melanura, Swains.

(Plate XV. fig. 9.)

Rhynchops melanura, *Scl. & Salv. P. Z. S.* 1866, p. 201; *Saunders, Cat. Birds B. M.* xxv. p. 156 (1896); *Sharpe, Hand-l.* i. p. 138 (1899).

The eggs of the Black-tailed Skimmer are of a broad oval form, short and rounded. The ground is of a pale buff colour, and this is spotted and blotched all over with chocolate-brown and underlying pale purple. Eleven specimens measure from 1.55 to 1.8 in length, and from 1.25 to 1.4 in breadth.

11. Ucayali River, Upper Amazonia Saunders Coll.
(*E. Bartlett*).

Rhynchops flavirostris, V.

Rhynchops flavirostris, *Baedecker, L. Brehm & A. Brehm, J. f. O.* 1853, App. p. 117, tab. v. fig. 2; *Heugl. Vög. N. O.-Afr.* ii. pt. 11, p. 1463, pl. 50. fig. 3 (1873); *Saunders, Cat. Birds B. M.* xxv. p. 158 (1896); *Sharpe, Hand-l. i.* p. 138 (1899).

The eggs of the Yellow-billed Skimmer resemble those of *R. melanura*, but are smaller. Some of the specimens are of a remarkably narrow, elongated form. They measure from 1.53 to 1.64 in length, and from 1.12 to 1.17 in breadth.

Rhynchops albicollis, Swains.

(Plate XV. fig. 4.)

Rhynchops albicollis, *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 316 (1890); *Saunders, Cat. Birds B. M.* xxv. p. 159 (1896); *Sharpe, Hand-l. i.* p. 138 (1899).

The eggs of the Indian Skimmer are of a broad oval form, more or less pointed at the smaller end. The ground varies from pale cream-colour to pale buff, and, when the eggs are fresh, it is frequently tinged with grey, green or pink. The markings, which consist of bold streaks and blotches, are of a reddish-brown or chocolate-brown colour, and sometimes they are so intensely dark as to appear almost black. There are also the usual underlying pale purple markings. As pointed out by Mr. Hume, the streaks frequently lie at an angle with the longitudinal axis of the egg. The eggs measure from 1.45 to 1.75 in length, and from 1.05 to 1.3 in breadth.

Sub-Family LARINÆ.

Genus **XEMA**, *Leach*.**Xema sabinei** (*J. Sabine*).

(Plate XVIII. fig. 3.)

Xema sabinii, *Newton*, *P. Z. S.* 1871, p. 57, pl. iv. fig. 5; *Dresser*, *Birds Eur.* viii. p. 337 (1874); *Nelson*, *Rep. Nat. Hist. Alaska*, p. 56 (1887); *MacFarlane*, *Proc. U. S. Nat. Mus.* xiv. p. 419 (1891); *Saunders*, *Cat. Birds B. M.* xxv. p. 162 (1896); *Sharpe*, *Hand-l.* i. p. 139 (1899).

Xema sabini, *Baird*, *Brewer & Ridgw. Water Birds N. Am.* ii. p. 269 (1884).

Larus sabinii, *Seebohm*, *Brit. Birds*, iii. p. 298, pl. 54 (1885); *id.* *Eggs of Brit. Birds* p. 105, pl. 36. fig. 8 (1896).

The eggs of Sabine's Gull are usually of a pointed oval form, but some are pyriform. In coloration, they closely resemble the eggs of the Skuas. The ground is of a brown colour of various shades, tinged with olive. The markings consist of spots and small blotches, are pale and indistinct, and are pretty evenly distributed over the whole shell, but in a few specimens there is a tendency for these to form a zone or imperfect cap at the larger end. The surface-markings are brown; and the underlying markings greyish brown. Numerous examples measure from 1.62 to 1.95 in length, and from 1.17 to 1.33 in breadth.

Genus **CREAGRUS**, *Bp.***Creagrus furcatus** (*Nébourg*).

(Plate XVI. fig. 3.)

Xema furcata, *Saunders*, *Cat. Birds B. M.* xxv. p. 165 (1896); *Rothsch. & Hartert*, *Nor. Zool.* vi. p. 196 (1899).

Creagrus furcatus, *Sharpe*, *Hand-l.* i. p. 139 (1899).

The eggs of Nébourg's Gull are of a perfectly regular oval form. The ground is of a light cream-colour or very pale buff, occasionally with a faint tinge of green. The underlying markings are numerous, large, and of a pale purple colour. The surface-markings, consisting of spots and large blotches of deep chocolate-brown or blackish brown, are evenly distributed over the shell, but as in

the case of the eggs of most Gulls, they are much bolder at the larger end than elsewhere. Five specimens measure from 2.5 to 2.62 in length, and from 1.75 to 1.8 in breadth.

Genus **LARUS**, Linn.

Larus minutus, Pall.

Larus minutus, Thien. *Fortpflanz. ges. Vög.* tab. lxxxvii. fig. 4, a-e (1845-54); Dresser, *Birds Eur.* viii. p. 373 (1871); Seebohm, *Brit. Birds*, iii. p. 301, pl. 54 (1885); *id.* *Eggs of Brit. Birds*, p. 107, pl. 36. figs. 1, 2 (1896); Saunders, *Cat. Birds B. M.* xxv. p. 173 (1896); Sharpe, *Hand-l.* i. p. 139 (1899).

Hydrocolæus minutus, Baedeker, *Eier Eur. Vög.* tab. 72. fig. 5 (1855-63).

The eggs of the Little Gull are very varied. Many are of a regular oval form, but the majority are pointed at the smaller end. The ground varies from pale buff to brown and olive-brown. The markings are dark brown, frequently approaching black, and underlying pale purple. They vary in size from spots to large blotches, and are fairly equally distributed over the whole shell. The eggs measure from 1.5 to 1.75 in length, and from 1.13 to 1.23 in breadth.

Larus ichthyaëtus, Pall.

Larus ichthyaëtus, Thien. *Fortpflanz. ges. Vög.* tab. lxxxvii. fig. 1, a-c (1845-54); Dresser, *Birds Eur.* viii. p. 369 (1873); Bree, *Birds Eur.* 2nd ed. v. p. 83, pl.—(1876); Legge, *Birds Ceyl.* p. 1046 (1880); Seebohm, *Eggs of Brit. Birds*, p. 109, pl. 35. figs. 3, 4 (1896); Saunders, *Cat. Birds B. M.* xxv. p. 176 (1896); Sharpe, *Hand-l.* i. p. 139 (1899).

The eggs of the Great Black-headed Gull appear to be very

constant to one type. In shape they are regular ovals, sometimes slightly compressed at the smaller end. The ground-colour is pale buff, and the markings, which consist of spots, streaks and blotches, are, on some specimens yellowish brown, on others, the majority, dark blackish brown. The underlying markings are pale purple. The markings are firm and well defined, and are generally evenly spread over the shell, but in some examples the blotches are large and confluent and are collected at the larger end; whereas in others the markings are all comparatively small and delicate. The eggs measure from 2.9 to 3.3 in length, and from 2 to 2.2 in breadth.

Gavia melanocephala, *Baedecker, Eier Eur. Vög.* tab. 72. fig. 4 (1855-63).

The eggs of the Adriatic Black-headed Gull vary in shape from a short broad oval to an elongated oval. Of the seven specimens in the Collection, one, although much stained, appears to have been unspotted white; three are of a creamy-buff colour, rather sparingly spotted with yellowish brown or blackish brown and the usual underlying pale purple; and three are olive-buff, boldly blotched with chocolate-brown, yellowish brown and pale purple. They vary from 1.87 to 2.2 in length, and from 1.4 to 1.5 in breadth.

Larus franklini, Swains. & Rich.

Larus franklini, *Newton, P. Z. S.* 1871, p. 57, pl. iv. fig. 4; *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 258 (1884); *Saunders, Cat. Birds B. M.* xxv. p. 191 (1896); *Sharpe, Hand-l.* i. p. 140 (1899).

The six eggs of Franklin's Rosy Gull in the Collection vary in form from pointed to blunt oval. The ground-colour is olive-buff, and this is spotted and blotched with yellowish brown, blackish brown, and underlying pale purple. On two eggs the markings take the form of streaks and lines, which are interlaced and form an intricate pattern. The eggs measure from 2.02 to 2.15 in length, and from 1.37 to 1.45 in breadth.

Atricilla catesbaei, *Baedeker, Eier Eur. Vög.* tab. 72. fig. 2 (1855-63).
Larus atricilla, *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 254 (1884); *Seebohm, Brit. Birds*, iii. p. 315, fig. 52 (1885); *Saunders, Cat. Birds B. M.* xxv. p. 194 (1896); *Sharpe, Hand-l.* i. p. 140 (1899).

The eggs of the Laughing Gull are much of one type. They vary from a pointed to a blunt oval form. The ground-colour is a pale olive-buff and this is marked, pretty evenly all over the shell, but occasionally more densely at the larger end than elsewhere, with spots and small blotches of yellowish brown, chocolate-brown, blackish brown, and inconspicuously with pale underlying purple. The markings are sometimes linear and streaky. The eggs vary from 2 to 2.35 in length, and from 1.52 to 1.6 in breadth.

Larus cirrhocephalus (V.).

(Plate XVI. fig. 5.)

Larus cirrhocephalus, *Sci. & Huds. Argent. Orn.* ii. p. 201 (1889); *Holland, Ibis*, 1895, p. 216; *Saunders, Cat. Birds B. M.* xxv. p. 198 (1896); *Sharpe, Hand-l.* i. p. 140 (1899).

The eggs of the Grey-capped Gull in the Collection are of a pretty regular oval form, but some are compressed or pointed at the small end. The ground varies from dark cream-colour to olive-buff, and there is a decided tinge of green running through the paler specimens. In three-fourths of the examples the markings, which consist of spots, lines, and medium-sized blotches, are evenly distributed over the egg; but in the remainder the markings form a very irregular cap or zone at the large end. The surface-markings are yellowish brown, rufous brown or blackish brown, and the underlying ones, which are inconspicuous, are very pale purple. The eggs measure from 1.96 to 2.5 in length, and from 1.5 to 1.7 in breadth.

59. Argentine Republic, Nov. & Dec. A. H. Holland, Esq. [P.].

Larus maculipennis, Licht.

(Plate XVI. fig. 1.)

Larus maculipennis, *Sci. & Huds. Argent. Orn.* ii. p. 198 (1899); *Saunders, P. Z. S.* 1891, p. 373; *Holland, Ibis*, 1895, p. 216; *Saunders, Cat. Birds B. M.* xxv. p. 200 (1896); *Sharpe, Hand-l.* i. p. 140 (1899).

The eggs of the Spot-winged Gull are remarkably varied both with regard to the ground-colour and the disposition of the markings. They are of a regular oval form, sometimes pointed. Three eggs are of a pale unspotted blue colour; another is blue, sparingly

marked with yellowish brown. The remainder vary from pale greenish grey to olive-brown and deep buff. The markings, which are yellowish brown or blackish brown, with some underlying pale purple, consist of spots and blotches disposed over the shell in an infinite number of patterns. Numerous specimens measure from 1.9 to 2.2 in length, and from 1.37 to 1.5 in breadth.

Larus roseiventris, *Abbott*, *Ibis*, 1861, p. 166.

Larus glaucodes, *Saunders*, *Zool. 'Challenger' Exped.* ii. pt. viii. p. 138 (1880); *id.* *Cat. Birds B. M.* xxv. p. 203 (1896); *Sharpe*, *Hand-l.* i. p. 140 (1899).

Larus, sp. inc., *Sel. Zool. 'Challenger' Exped.* ii. pt. viii. p. 151 (1880).

The eggs of the Pink-bellied Gull are as varied as the eggs of *L. maculipennis*, and present the same types of coloration. They measure from 1.95 to 2.3 in length, and from 1.4 to 1.53 in breadth. There can be little doubt but that the two eggs collected by the 'Challenger' Expedition and marked "Tern Gull" belong to this species.

Gavia ridibunda, *Baudeker*, *Eier Eur. Vög.* tab. 72. fig. 3 (1855-63).

The eggs of the Black-headed Gull are subject to great variation both in shape and colour. The majority of the eggs are of a pointed oval form. In colour they are greenish grey, olive-buff or dark olive-brown, marked in every conceivable manner with brown and blackish brown of many shades, and underlying pale purple. A few specimens are plain blue. They measure from 1.85 to 2.45 in length, and from 1.25 to 1.65 in breadth.

Larus hemprichi (*Bruch*).

(Plate XVI. fig. 4.)

Larus hemprichi, *Heugl. Vög. N.O.-Afr.* ii. pt. 11, p. 1399, pl. 50. fig. 5 (1873); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 293 (1890); *Saunders, Cat. Birds B. M.* xxv. p. 221 (1896); *Sharpe, Hand-l.* i. p. 140 (1899).

The eggs of Hemprich's Gull are all very much of one type and may be easily recognized. They are of a broad, and somewhat pointed, oval form. The ground varies between cream-colour and pale creamy buff. The markings, consisting of spots and small blotches with, occasionally, a few lines, are all distinct and separate and show no tendency to be confluent, nor are they, as a rule, more densely disposed at the large end than elsewhere. In fact, the even distribution of the markings over the whole shell is the leading feature of the eggs of this species. The surface-markings are of various shades of yellowish brown, occasionally deepening to a chocolate-brown, the underlying markings being very pale purple. The eggs vary from 2.1 to 2.45 in length, and from 1.45 to 1.72 in breadth.

135. Island of Astolah, Mekran Coast, Hume Coll.

Larus crassirostris, *V.*

(Plate XVII. fig. 4.)

Larus crassirostris, *Swinhoe, Ibis*, 1875, p. 138; *Seebohm, Birds Japan. Emp.* p. 293 (1890); *Saunders, Cat. Birds B. M.* xxv. p. 227 (1896); *Sharpe, Hand-l.* i. p. 140 (1899).

The few eggs of Temminck's Gull in the Collection are very uniform. They are of a regular oval form. The ground-colour is olive-brown, and it is evenly marked all over with spots and very small blotches of yellowish and chocolate-brown, with some underlying pale purple clouds and streaks. Seven specimens measure from 2.35 to 2.5 in length, and from 1.7 to 1.8 in breadth.

Larus gelastes, *Thienem.*

Larus gelastes, *Thien. Fortpflanz. ges. Vög.* tab. xc. fig. 4 (1845-54); *Saunders, Ibis*, 1871, p. 400; *Bree, Birds Eur.* 2nd ed. v. p. 72, pl. — (1876); *Dresser, Birds Eur.* viii. p. 389 (1878); *Oates ed. Hume, Nests & Eggs Ind. B.* iii. p. 294 (1890); *Sharpe, Ibis*, 1891, p. 115; *Saunders, Cat. Birds B. M.* xxv. p. 230 (1896); *Sharpe, Hand-l.* i. p. 140 (1899).

Gelastes lambruschinii, *Baedeker, Eier Eur.* Vög. tab. 72. fig. 1 (1855-63).

The eggs of the Slender-billed Gull are fairly uniform in colour. They are of a broad, pointed oval form. The ground of the majority of the eggs is pure white, but a few have it of a pale cream-colour, and others of a pinkish buff-colour. The surface-markings, consisting of spots and blotches, are frequently black; at times yellowish brown, chocolate-brown, or even reddish brown. The underlying markings are of a pale purple and very conspicuous. On many examples, the surface-markings are small and evenly distributed over the shell; on others, they consist of huge blotches as well as spots, and they are frequently massed together at the broad end, where they form an ill-defined cap or zone. Some specimens are marked with lines and scrawls. The eggs measure from 2.1 to 2.27 in length, and from 1.45 to 1.6 in breadth.

The small series of eggs of the Silver Gull in the Collection shows that there is considerable variation in their colour. They are of a rather broad oval form, about half of the specimens being pointed and the others blunt. The ground varies from pale green to pale

buff, olive-buff, and light stone-colour. The markings are sometimes deep black, at other times yellowish brown and chocolate-brown, and there are the usual pale purple underlying spots and blotches. Examples measure from 2 to 2·3 in length, and from 1·45 to 1·6 in breadth.

Larus scopulinus, Gray.

Larus scopulinus, Potts, *Tr. N. Z. Inst.* ii. p. 76 (1869); *Buller, Birds New Zeal.* 2nd ed. ii. p. 55 (1888); *Saunders, Cat. Birds B. M.* xxv. p. 238 (1896); *Sharpe, Hand-l.* i. p. 141 (1899).

The eggs of the Red-billed Gull in the Collection are very similar to each other. They are of a rather narrow oval shape. The ground is of an olive-buff colour, and this is marked with well-defined small spots and blotches of yellowish and chocolate-brown and underlying pale purple. In three examples there is a distinct tendency for the markings to form an irregular zone round the large end. Four specimens measure respectively: 2·2 by 1·45, 2·15 by 1·45, 2·25 by 1·45, 2·17 by 1·55.

Larus hartlaubi (*Bruch*).

(Plate XVII. fig. 2.)

Larus hartlaubi, *Sharpe, ed. Layard, Birds S. Africa*, p. 698 (1884); *Saunders, Cat. Birds B. M.* xxv. p. 240 (1896); *Sharpe, Hand-l.* i. p. 141 (1899).

Of the two eggs of Hartlaub's Gull in the Collection, one is of a very pale greenish stone-colour and the other is buff-coloured. In both, the markings are pale purple, purplish brown or yellowish brown, and they are evenly and somewhat densely distributed over the shell. The specimens measure respectively: 2·19 by 1·42; 2·16 by 1·41.

Larus marinus, Linn.

Larus marinus, *Thien. Fortpflanz. ges. Vög.* tab. lxxxviii. fig. 1, a-d (1845-54); *Baedecker, Eier Eur. Vög.* tab. 62. fig. 1 (1855-63); *Hewitson, Eggs of Brit. Birds*, ii. p. 501, pl. cxli. fig. i (1856); *Dresser, Birds Eur.* viii. p. 427 (1872); *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 225 (1884); *Seebohm, Brit. Birds*, iii. p. 323, pl. 52 (1885); *id. Eggs of Brit. Birds*, p. 111, pl. 35. figs. 1, 2 (1896); *Saunders, Cat. Birds B. M.* xxv. p. 241 (1896); *Sharpe, Hand-l.* i. p. 141 (1899).

The eggs of the Great Black-backed Gull vary but little. In shape they are regular ovals, sometimes broad, sometimes narrow. In the large series in the Collection, one egg is of a plain blue colour, and another is blue with a few brown markings, but the remaining specimens exhibit little variety. The ground of all is of a pale creamy buff or light stone-colour with an olive tinge. The markings, which are of a yellowish-brown or blackish-brown colour, with some underlying pale purple, are of small size and are very evenly distributed over the shell, only in rare cases forming an approach to a cap or zone at the large end. A few examples exhibit somewhat larger blotches. The eggs measure from 2·7 to 3·2 in length, and from 2 to 2·2 in breadth.

Larus antipodus, *Thien. Fortpflanz. ges. Vög.* tab. xic. fig. 2 (1845-54).

The eggs of the Southern Black-backed Gull closely resemble

those of *L. marinus*, but the ground-colour is more varied, many specimens being of a dark olive-buff. The markings are of the same colour and character as in the eggs of *L. marinus*; but it may perhaps be said of them that they are, on the whole, coarser, and that in a larger proportion of the eggs they form a very irregular cap or zone at the large end. Specimens measure from 2.45 to 3.1 in length, and from 1.8 to 2.05 in breadth.

- Larus leucophæus*, *Saunders, Ibis*, 1871, p. 400; *Dresser, Birds Eur.* viii. p. 411 (1873).

The eggs of the Yellow-legged Herring Gull in the Collection are fairly uniform in coloration and resemble the commoner type of egg of *L. argentatus*, the ground-colour being buff, marked distinctly and evenly all over with spots and moderately-sized blotches of various shades of brown and underlying pale purple. A few examples are much paler than the average, the ground being of a cream-colour, but marked in the usual manner. The eggs measure from 2.5 to 3.05 in length, and from 1.9 to 2 in breadth.

Larus audouini, Payr.

- Larus audouini*, Thien. *Fortpflanz. ges. Vög.* tab. lxxxviii. fig. 3 (1845-54); *Bree, Birds Eur.* 1st ed. iv. p. 92, pl. — (1867); 2nd ed. v. p. 62, pl. — (1876); *Lilford, Ibis*, 1875, p. 31; *Dresser, Birds Eur.* viii. p. 395 (1878); *Saunders, Cat. Birds B. M.* xxv. p. 271 (1896); *Sharpe, Hand-l. i.* p. 142 (1899).

Three eggs of Audouin's Gull in the Collection have a buff ground and are pretty thickly spotted and blotched with blackish brown. A fourth is of a kind of creamy-buff tint, and the markings, which are similar in character to those on the other examples, are of a pale yellowish-brown colour. All four have the usual pale purple underlying markings. They measure respectively: 2.4 by 1.75; 2.45 by 1.73; 2.45 by 1.8; 2.53 by 1.66.

Larus delawarensis, Ord.

(Plate XVII. fig. 5.)

Larus delawarensis, *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 244 (1884); *Saunders, Cat. Birds B. M.* xxv. p. 273 (1896); *Sharpe, Hand-l.* i. p. 142 (1899).

The two eggs of the Ring-billed Gull in the Collection are of quite dissimilar types. One is of a regular oval form and has an olive-buff ground, sparingly marked, except at the larger end, where there are huge confluent blotches forming an irregular zone, with spots and specks of deep chocolate-brown; the underlying pale purple markings are few and inconspicuous. The second specimen is a pointed oval and has a light buff ground, boldly marked all over with spots and blotches of blackish brown. The underlying markings on this egg are numerous, large and conspicuous. The two measure respectively: 2.25 by 1.63; 2.35 by 1.6.

Larus californicus, Lawr.

(Plate XVIII. fig. 2.)

Larus californicus, *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 242 (1884); *MacFarlane, Proc. U. S. Nat. Mus.* xiv. p. 418 (1891); *Saunders, Cat. Birds B. M.* xxv. p. 276 (1896); *Sharpe, Hand-l.* i. p. 142 (1899).

The eggs of the California Gull in the Collection show considerable variation, but can all be matched by those of *L. fuscus*, and a larger series would, no doubt, display all the types to be found among the eggs of that species. They measure from 2.45 to 2.75 in length, and from 1.75 to 1.85 in breadth.

Larus canus, Linn.

Larus canus, *Thien. Fortpflanz. ges. Vög.* tab. xc. fig. 3, a-f (1845-54); *Baedecker, Eier Eur. Vög.* tab. 39. fig. 3 (1855-63); *Hewitson, Eggs of Brit. Birds*, ii. p. 495, pl. cxxxviii. (1856); *Dresser, Birds Eur.* viii. p. 381 (1873); *Seebohm & Harvie-Brown, Ibis*, 1876, p. 451; *Seebohm, Ibis*, 1879, p. 161; *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 250 (1884); *Seebohm, Brit. Birds*, iii. p. 316, pl. 52 (1885); *id. Eggs of Brit. Birds*, p. 109, pl. 34. figs. 5, 6 (1896); *Saunders, Cat. Birds B. M.* xxv. p. 277 (1896); *Sharpe, Hand-l. i.* p. 142 (1899).

The eggs of the Common Gull are not subject to any great variation in coloration. An occasional blue egg may be found, but the majority are much of one type. The ground varies between dark cream-colour and olive-buff and olive-brown. The surface-markings are dark brown, sometimes approaching black, and the underlying markings are grey or pale purple. In most examples the markings, consisting of spots and blotches, are pretty evenly distributed over the shell; in a few, the blotches are larger and collected together chiefly at the larger end. The eggs measure from 2.15 to 2.65 in length, and from 1.6 to 1.75 in breadth.

Larus brachyrhynchus, Richardson.

(Plate XVII. fig. 1.)

- Larus brachyrhynchus*, *Baird, Brewer & Ridgw. Water Birds N. Am.* ii. p. 247 (1884); *Nelson, Report Nat. Hist. Alaska*, p. 54 (1887); *MacFarlane, Proc. U. S. Nat. Mus.* xiv. p. 418 (1891); *Saunders, Cat. Birds B. M.* xxv. p. 283 (1896); *Sharpe, Hand-l.* i. p. 142 (1899).

The eggs of the Short-billed Gull in the Collection are of a pointed oval form. One example has the ground of a pale greenish colour; another of a full buff colour; and two others of a greenish-grey colour. The markings, which consist of spots, small blotches and a few streaks, are of a chocolate or blackish-brown colour and are, in all cases, more dense at the large end, where they form a more or less broken cap or zone. Four specimens measure respectively: 2.12 by 1.56; 2.05 by 1.57; 2.21 by 1.5; 2.15 by 1.56.

The eggs of the Glaucous-winged Gull are very uniform and resemble the common type of egg of *L. argentatus*. The ground-colour varies from pale creamy-buff to a pale buff, and this is evenly spotted and blotched all over with yellowish and chocolate-brown, sometimes approaching black, and underlying pale purple. A few have, in addition to the normal markings, some lines and scrawls. The eggs measure from 2.75 to 3.05 in length, and from 1.86 to 2 in breadth.

Leucus glaucus, Baedeker, *Eier Eur. Vög.* tab. 39. fig. 1 (1855-63).

Larus barrovianus, Nelson, *Report Nat. Hist. Alaska*, p. 51 (1887).

The eggs of the Glaucous Gull in the Collection, although not numerous, show quite an extensive variation. They are of a pointed oval form. A few are pale blue, marked very sparingly with blackish spots and here and there a blotch. Others are yellowish grey, marked with some brown spots and huge blotches. Others again form a remarkable type, quite unique among Gulls' eggs. The ground is of a pale pink and the whole shell is densely covered with streaks, clouds, and smears of brick-red and underlying pale purple. The common type of egg has the ground of an olive-grey or pale buff colour, and this is evenly marked all over with spots, lines, and small blotches of yellowish and dark chocolate-brown, and the usual underlying grey or pale purple. The eggs measure from 2.9 to 3.6 in length, and from 1.9 to 2.4 in breadth.

Genus *GABIANUS*, *Bruch*.

Gabianus pacificus (*Lath.*).

Larus pacificus, *Thien. Fortpflanz. ges. Vög.* tab. xic. fig. 3 (1845-54); *Gould, Handb. Birds Austr.* ii. p. 385 (1865); *Campbell, Nests & Eggs Austr. Birds*, p. 65 (1883); *North, Nests & Eggs Austr. Birds*, p. 351, pl. xx. fig. 1 (1889); *Le Souëf, Ibis*, 1895, p. 421.

Gabianus pacificus, *Saunders, Cat. Birds B. M.* xxv. p. 297 (1896); *Sharpe, Hand-l.* i. p. 143 (1899).

The eggs of the Pacific Gull in the Collection are pointed ovals, olive-buff in colour, marked with spots and blotches of dark chocolate-brown and underlying pale purple. In two specimens, the markings are small and evenly spread over the shell; in the third they consist of some spots and small blotches and in

addition a few huge smears. One egg is fractured, and cannot be measured. The other two measure respectively 2·8 by 1·97; 2·83 by 1·95.

3. Tasmania.

The eggs of the Ivory Gull in the Collection are of a broad oval form, pointed at the smaller end. Three are of a pale stone-colour, rather sparingly marked with dark brown of various shades and numerous conspicuous blotches of pale inky-purple. Two others have the ground buff, and they are boldly marked with spots and rather large blotches of deep brown, but the underlying markings of pale purple are less conspicuous than in the other eggs. Five examples measure from 2·15 to 2·36 in length, and from 1·63 to 1·75 in breadth.

The eggs of the Kittiwake are of a pointed oval form and are most varied in their coloration. The ground ranges from cream-colour to pinkish buff, and from olive-grey to olive-brown. The surface markings are of rich chocolate-brown, reddish brown or yellowish brown, and the underlying markings, which are extremely conspicuous in many eggs, are grey or pale purple. The markings on some specimens are very small, on others large, consisting of huge blotches. Sometimes the markings are evenly distributed over the shell; at others they are chiefly collected together at the large end to form a cap or zone. A few eggs are covered with a beautiful tangled network of lines; in fact the patterns on the Kittiwakes' eggs are infinite in number, and it is difficult to get half-a-dozen examples to match each other. They measure from 2.1 to 2.4 in length, and from 1.5 to 1.75 in breadth.

Megalestris catarrhactes, *Saunders, Cat. Birds B. M.* xxv. p. 315 (1896); *Sharpe, Hand-l.* i. p. 143 (1899).

The eggs of the Great Skua are for the most part somewhat elongated pointed ovals, but a few are broad ovals and others elliptical. They vary considerably in coloration. A small proportion are of a pale bluish white, obsoletely marked with some underlying pale purple blotches. In the majority the ground is greyish buff, yellowish grey olive-buff and olive-brown. The markings consist of spots and blotches, and while in some eggs they are evenly distributed over the shell, in others they show a tendency to collect at the large end. The

surface-markings are yellowish brown or dark brown of various shades, sometimes approaching black. The underlying markings are grey or pale purple and rather inconspicuous. The eggs measure from 2.4 to 3 in length, and from 1.75 to 2 in breadth.

Megalestris chilensis, *Bp.*

Megalestris chilensis, *Saunders, Cat. Birds B. M.* xxv. p. 318 (1896)
Sharpe, Hand-l. i. p. 144 (1899).

The sole egg of the Chilian Skua in the Collection is a pointed oval and inseparable from many of the eggs of the Great Skua.

The ground is of a greyish-buff colour, and this is spotted and blotched with pale yellowish brown and underlying pale purple. It measures 2·9 by 2·05.

Megalestris maccormicki (*Saunders*).

Megalestris maccormicki, *Saunders, Cat. Birds B. M.* xxv. p. 321 (1896); *Sharpe, Hand-l.* i. p. 144 (1899).

Lestris, Borchgr. Geogr. Journ. xvi. p. 403 (1900).

The eggs of McCormick's Skua are quite of the same type as those of *M. catarrhactes* and *M. antarctica*, and as variable in coloration. The series contains, however, three specimens which are abnormal in colour, the ground being a clear greenish blue, sparingly marked at the large end only with a few smears and blotches of yellowish brown. Twenty-six examples measure from 2·58 to 3·1 in length and from 1·88 to 2·05 in breadth. Judging from the numbers recorded on the eggs, they all appear to have been taken in pairs.

Genus STERCORARIUS, Briss.

Stercorarius crepidatus (Banks).

Lestris parasiticus, Thien. *Fortpflanz. ges. Vög.* tab. lxxxvi. fig. 3, a-f (1845-54); *Baedeker, Eier Eur. Vög.* tab. 64. fig. 2 (1855-63).

Lestris richardsonii, Hewitson, *Eggs of British Birds*, ii. p. 509, pl. cxliii. fig. ii (1856).

Stercorarius crepidatus, Dresser, *Birds Eur.* viii. p. 471 (1876); Seebohm & Harvie-Brown, *Ibis*, 1876, p. 453; Feilden in Markham's *Polar Recon.* pp. 335, 339 (1881); Saunders, *Cat. Birds B. M.* xxv. p. 327 (1896); Sharpe, *Hand-l.* i. p. 144 (1899).

Stercorarius richardsoni, Seebohm, *Brit. Birds*, iii. p. 353, pl. 55 (1885); *id.* *Eggs of Brit. Birds*, p. 116, pl. 37. figs. 1, 2 (1896).

The eggs of Richardson's Skua are of a pointed oval form, sometimes broad and at other times lengthened and narrow. The ground-colour varies from greenish grey to dark olive and russet-brown. The markings consist of spots, blotches and smears, and are of a yellowish brown or brown of various shades, sometimes approaching black. The underlying markings are seldom conspicuous, and are of a pale purple colour. The markings of both kinds are generally evenly distributed over the shell, but in many cases they are collected chiefly at the larger end, where they form an irregular cap or zone. The eggs measure from 2 to 2.5 in length, and from 1.47 to 1.7 in breadth.

APPENDIX.

Page 10. Add:—

Tinamus solitarius (*Vieill.*).

Tinamus solitarius, *Salvadori, Cat. Birds B. M.* xxvii. p. 501 (1895);
Sharpe, Hand-l. i. p. 8 (1899).

The egg of the Solitary Tinamou in the Collection is of the same blue colour as the eggs of the other Tinamous of this genus, but is of a blunt oval shape. It measures 2·55 by 1·88.

1. Rio de Janeiro. Alexander Fry, Esq. [P.].

Page 11. Add:—

Crypturus obsoletus (*Temm.*).

Crypturus obsoletus, *Euler, J. f. O.* 1867, p. 418; *Scl. & Huds. Argent. Orn.* ii. p. 207 (1889); *Salvadori, Cat. Birds B. M.* xxvii. p. 519 (1895); *Sharpe, Hand-l. i.* p. 9 (1899).

The egg of the Brown Tinamon in the Collection is of a somewhat lengthened oval form, and thus differs from the eggs of the other species of this genus. It is of a pinkish stone-colour, and measures 2 by 1·37.

Eudyptes adeliæ, Borchgr. Geogr. Journ. xvi. pp. 391, 402 (1900).

The eggs of the Adelia-Land Penguin vary greatly in shape. Some are of a regular oval form, some elliptical, and others nearly spherical. They are of a greenish-white or pale green colour. The largest example in the Collection measures 3·2 by 2·3, and the smallest 2·4 by 2·25. The eggs taken by the 'Southern Cross' Expedition were found in pairs, and each pair is marked with a separate serial number.

28. Cape Adare, Antarctic Ocean Sir George Newnes, Bart.,

Genus **PAGODROMA**, *Bp.*

Pagodroma nivea (*Gm.*). .

Pagodroma nivea, *Moseley, Notes Nat. 'Challenger,'* p. 253 (1879); *Scl. Ibis*, 1894, p. 498; *Salvin, Cat. Birds B. M.* xxv. p. 419 (1896); *Sharpe, Hand-l. i.* p. 127 (1899); *Borchgr. Geogr. Journ.* xvi. pp. 393, 403 (1900).

The eggs of the Snowy Petrel vary from a pointed to a blunt oval shape and sometimes they are quite elliptical. They are white and quite devoid of all gloss. The shell is slightly rough. Ten examples measure from 1·98 to 2·35 in length, and from 1·35 to 1·67 in breadth.

EXPLANATION OF THE PLATES.

PLATE I.

- Fig. 1. Egg of *Tinamus robustus*.
2. „ *Crypturus cinnamomeus*.
3. „ *Nothoprocta perdicaria*.
4. „ *Culopezus elegans*.
5. „ *Tinamotis pentlandi*.

PLATE II.

- Figs. 1 & 2. Eggs of *Ammoperdix bonhami*.
Fig. 3. Egg of *Lyrurus mlokosiewiczi*.
4. „ *Francolinus chinensis*.
5. „ „ *pictus*.
6. „ „ *pondicerianus*.
7. „ *Tetraogallus tibetanus*.
8. „ „ *altaicus*.

PLATE III.

- Fig. 1. Egg of *Perdica asiatica*.
2. „ *Melanoperdix nigra*.
3. „ *Arboricola crudigularis*.
4. „ *Microperdix erythrorhyncha*.
5. „ *Arboricola torqueola*.
6. „ *Rollulus roulroul*.
7. „ *Francolinus gularis*.
8. „ „ *sharppei*.
9. „ „ *biculcaratus*.

PLATE IV.

- Fig. 1. Egg of *Synœcus raalteni*.
 2. „ *Excalfactoria lineata*.
 3. „ *Bambusicola sonorivox*.
 4. „ *Galloperdix spadicea*.
 5. „ *Bambusicola thoracica*.
 6. „ *Coturnix novæ-zealandicæ*.
 7. „ *Ithagenes geoffroyi*.
 8. „ *Bambusicola fytchei*.
 9. „ *Galloperdix lunulata*.

PLATE V.

- Fig. 1. Egg of *Lophura nobilis*.
 2. „ *Lobiophasis bulweri*.
 3. „ *Lophura rufa*.
 4. „ *Crossoptilum tibetanum*.
 5. „ *Tragopan blythi*.

PLATE VI.

- Fig. 1. Egg of *Phasianus versicolor*.
 2. „ *Calophasis ellioti*.
 3. „ *Phasianus scintillans*.
 4. „ *Argusianus grayi*.
 5. „ *Gennœus lineatus*.
 6. „ *Chrysolophus amherstiae*.

PLATE VII.

- Fig. 1. Egg of *Acryllium vulturinum*.
 2. „ *Numida coronata*.
 3. „ *Oreortyx pictus*.
 4, 5. „ *Eupsychortyx leucopogon*.
 6. „ *Agriocharis ocellata*.
 7. „ *Dendroortyx leucophrys*.
 8. „ *Gallus lafayettei*.

PLATE VIII.

- Fig. 1. Egg of *Geotrygon montana*.
 2, 3. „ *Chalcophaps indica*.
 4. „ *Turnix fasciata*.
 5, 10. „ *Pteroclidurus namaquus*.
 6, 9. „ *Turnix powelli*.
 7. „ „ *velox*.
 8. „ „ *lepurana*.
 11. „ *Pteroclidurus alchatus*.
 12. „ *Turnix pyrrhothorax*.
 13. „ *Syrnhaptes tibetanus*.

PLATE IX.

- Fig. 1. Egg of *Rallus virginianus*.
 2. „ *Porzana carolina*.
 3. „ *Gallinula galeata*.
 4. „ *Rallus antarcticus*.
 5. „ *Amaurornis phœnicura*.
 6. „ *Pareudiastes pacificus*.
 7. „ *Porphyriornis nesiotis*.
 8. „ *Oreciscus jamaicensis*.
 9. „ *Aramides albiventris*.

PLATE X.

- Fig. 1. Egg of *Oreciscus cayennensis*.
 2. „ „ *albigularis*.
 3. „ *Porphyrio poliocephalus*.
 4. „ *Porphyriops melanops*.
 5. „ *Fulica leucoptera*.
 6. „ *Gallicrex cinerea*.
 7. „ *Fulica rufifrons*.
 8. „ „ *armillata*.

PLATE XI.

- Fig. 1. Egg of *Halocyptena microsoma*.
 2. „ „ *Podicipes capensis*.
 3. „ „ *Oceanodroma melania*.
 4. „ „ „ *castro*.
 5. „ „ *Colymbus pacificus*.
 6. „ „ *Oceanodroma socorroensis*.
 7. „ „ *Oceanites oceanica*.
 8. „ „ *Podicipes americanus*.
 9. „ „ *Echinophorus major*.

PLATE XII.

- Fig. 1. Egg of *Fregetta albicularis*.
 2. „ „ „ *melanogaster*.
 3. „ „ *Puffinus yelkouan*.
 4. „ „ „ *subularis*.
 5. „ „ *Ptychorhamphus aleuticus*.
 6. „ „ *Pseuduria snowi*.
 7. „ „ *Simorhynchus pusillus*.
 8. „ „ *Pelecanoides garnoti*.

PLATE XIII.

- Fig. 1. Egg of *Sterna albistriata*.
 2. „ „ „ *vittata*.
 3. „ „ „ *virgata*.
 4. „ „ „ *forsteri*.
 5. „ „ *Hydrochelidon surinamensis*.
 6. „ „ *Sterna melanogaster*.
 7. „ „ *Seena seena*.
 8. „ „ *Phaethusa magnirostris*.
 9. „ „ *Sterna hirundinacea*.

PLATE XIV.

- Fig. 1. Egg of *Sterna nereis*.
 2. „ „ *saundersi*.
 3. „ „ *antillarum*.
 4. „ „ *longipennis*.
 5. „ „ *albigena*.
 6. „ „ *frontalis*.
 7. „ „ *maxima*.
 8. „ „ *lunata*.
 9. „ „ *aleutica*.

PLATE XV.

- Fig. 1. Egg of *Sterna superciliaris*.
 2. „ *Procelsterna cerulea*.
 3. „ *Sterna melanauchen*.
 4. „ *Rhynchops albicollis*.
 5. „ *Anous galapagensis*.
 6. „ „ *ridgwayi*.
 7. „ *Sterna trudeaui*.
 8. „ *Rhynchops nigra*.
 9. „ „ *melanura*.

PLATE XVI.

- Fig. 1. Egg of *Larus maculipennis*.
 2. „ „ *glaucodes*.
 3. „ *Creagrus furcatus*.
 4. „ *Larus hemprichi*.
 5. „ „ *cirrhocephalus*.

PLATE XVII.

- Fig. 1. Egg of *Larus brachyrhynchus*.
2. „ „ *hartlaubi*.
3. „ *Rissa brevirostris*.
4. „ *Larus crassirostris*.
5. „ „ *delawarensis*.

PLATE XVIII.

- Fig. 1. Egg of *Leucophaeus scoresbyi*.
2. „ „ *Larus californicus*.
3. „ „ *Xema sabinei*.
4. „ „ *Larus affinis*.
5. „ „ *Megalestris antarctica*.

LIST OF THE CURRENT
NATURAL HISTORY PUBLICATIONS
OF THE TRUSTEES OF THE
BRITISH MUSEUM.

The following publications can be purchased through the Agency of *Messrs. LONGMANS & Co.*, 39, *Paternoster Row*; *Mr. QUARITCH*, 15, *Picadilly*; *Messrs. KEGAN PAUL, TRENCH, TRÜBNER & Co.*, *Paternoster House, Charing Cross Road*; and *Messrs. DULAU & Co.*, 37, *Soho Square*; or at the NATURAL HISTORY MUSEUM, *Cromwell Road, London, S.W.*

Catalogue of the Specimens and Drawings of Mammals, Birds, Reptiles, and Fishes of Nepal and Tibet. Presented by B. H. Hodgson, Esq., to the British Museum. 2nd edition. By John Edward Gray. Pp. xii., 90. [With an account of the Collection by Mr. Hodgson.] 1863, 12mo. 2s. 3d.

Catalogue of the Mammalia and Birds of New Guinea in the Collection of the British Museum. [With list of Species of New Guinea Birds, and those of the neighbouring Localities.] By John Edward Gray, Ph.D., F.R.S., and George Robert Gray, F.L.S., &c. Pp. 63. Woodcuts. 1859, 8vo. 1s. 6d.

Report on the Zoological Collections made in the Indo-Pacific Ocean during the voyage of H.M.S. "Alert," 1881-2. Pp. xxv., 684. 54 Plates. 1884, 8vo.

Summary of the Voyage	...	By Dr. R. W. Coppinger.
Mammalia	" O. Thomas.
Aves	" R. B. Sharpe.
Reptilia, Batrachia, Pisces	" A. Günther.
Mollusca	" E. A. Smith.
Echinodermata	" F. J. Bell.
Crustacea	" E. J. Miers.
Coleoptera	" C. O. Waterhouse.
Lepidoptera	" A. G. Butler.
Alecyonaria and Spongiida	" S. O. Ridley.

17. 10s.

- A Monograph of Christmas Island (Indian Ocean) : Physical Features and Geology by C. W. Andrews, B.A., B.Sc., F.G.S., with descriptions of the Fauna and Flora by numerous contributors. Pp. xv., 337: 22 plates (7 coloured), a map, and 27 illustrations in text. [With Index.] 1900, 8vo. 20s.

MAMMALS.

- Catalogue of the Bones of Mammalia in the Collection of the British Museum. By Edward Gerrard. Pp. iv., 296. 1862, 8vo. 5s.
- Catalogue of Monkeys, Lemurs, and Fruit-eating Bats in the Collection of the British Museum. By Dr. J. E. Gray, F.R.S., &c. Pp. viii., 137. 21 Woodcuts. 1870, 8vo. 4s.
- Catalogue of Carnivorous, Pachydermatous, and Edentate Mammalia in the British Museum. By John Edward Gray, F.R.S., &c. Pp. vii., 398. 47 Woodcuts. 1869, 8vo. 6s. 6d.
- Catalogue of Seals and Whales in the British Museum. By John Edward Gray, F.R.S., &c. 2nd Edition. Pp. vii., 402. 101 Woodcuts. 1866, 8vo. 8s.
- Supplement. By John Edward Gray, F.R.S., &c. Pp. vi., 103. 11 Woodcuts. 1871, 8vo. 2s. 6d.
- List of the Specimens of Cetacea in the Zoological Department of the British Museum. By William Henry Flower, LL.D., F.R.S., &c. [With Systematic and Alphabetical Indexes.] Pp. iv., 36. 1885, 8vo. 1s. 6d.
- Catalogue of Ruminant Mammalia (*Pecora*, Linnæus) in the British Museum. By John Edward Gray, F.R.S., &c. Pp. viii., 102. 4 Plates. 1872, 8vo. 3s. 6d.
- Catalogue of the Marsupialia and Monotremata in the Collection of the British Museum. By Oldfield Thomas. Pp. xiii., 401. 4 Coloured and 24 plain Plates. [With Systematic and Alphabetical Indexes.] 1888, 8vo. 1l. 8s.

BIRDS.

Catalogue of the Birds in the British Museum :—

- Vol. VI. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cichlomorphæ* : Part III., containing the first portion of the family Timeliidæ (Babbling Thrushes). By

Catalogue of the Birds in the British Museum—*continued*.

R. Bowdler Sharpe. Pp. xiii., 420. Woodcuts and 18 coloured Plates. [With Systematic and Alphabetical Indexes.] 1881, 8vo. 1*l*.

Vol. VII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cichlomorphæ*: Part IV., containing the concluding portion of the family Timeliidæ (Babbling Thrushes). By R. Bowdler Sharpe. Pp. xvi., 698. Woodcuts and 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1883, 8vo. 1*l*. 6*s*.

Vol. VIII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cichlomorphæ*: Part V., containing the families Paridæ and Laniidæ (Titmice and Shrikes); and *Certhiomorphæ* (Creepers and Nuthatches). By Hans Gadow, M.A., Ph.D. Pp. xiii., 386. Woodcuts and 9 coloured Plates. [With Systematic and Alphabetical Indexes.] 1883, 8vo. 1*l*. 7*s*.

Vol. IX. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Cimnirrimorphæ*, containing the families Nectariniidæ and Meliphagidæ (Sun Birds and Honey-eaters). By Hans Gadow, M.A., Ph.D. Pp. xii., 310. Woodcuts and 7 coloured Plates. [With Systematic and Alphabetical Indexes.] 1884, 8vo. 1*l*. 4*s*.

Vol. X. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Fringilliformes*: Part I., containing the families Dicæidæ, Hirundinidæ, Ampelidæ, Mniotiltidæ, and Motacillidæ. By R. Bowdler Sharpe. Pp. xiii., 682. Woodcuts and 12 coloured Plates. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 1*l*. 2*s*.

Vol. XI. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Fringilliformes*: Part II., containing the families Cœrebidæ, Tanagridæ, and Icteridæ. By Philip Lutley Selater, M.A., F.R.S. Pp. xvii., 431. [With Systematic and Alphabetical Indexes.] Woodcuts and 18 coloured Plates. 1886, 8vo. 1*l*.

Vol. XII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Fringilliformes*: Part III., containing the family Fringillidæ. By R. Bowdler Sharpe. Pp. xv., 871. Woodcuts and 16 coloured Plates. [With Systematic and Alphabetical Indexes.] 1888, 8vo. 1*l*. 8*s*.

Catalogue of the Birds in the British Museum—*continued*.

Vol. XIII. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Sturniformes*, containing the families Artamidæ, Sturnidæ, Ploceidæ, and Alaudidæ. Also the families Atrichiidæ and Menuridæ. By R. Bowdler Sharpe. Pp. xvi., 701. Woodcuts and 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1890, 8vo. 1l. 8s.

Vol. XIV. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Oligomyodæ*, or the families Tyrannidæ, Oxyrhamphidæ, Pipridæ, Cotingidæ, Phytotomidæ, Philepittidæ, Pittidæ, Xenicidæ, and Eurylæmidæ. By Philip Lutley Sclater, M.A., F.R.S. Pp. xix., 494. Woodcuts and 26 coloured Plates. [With Systematic and Alphabetical Indexes.] 1888, 8vo. 1l. 4s.

Vol. XV. Catalogue of the Passeriformes, or Perching Birds, in the Collection of the British Museum. *Tracheophonæ*, or the families Dendrocolaptidæ, Formicariidæ, Conopophagidæ, and Pteroptochidæ. By Philip Lutley Sclater, M.A., F.R.S. Pp. xvii., 371. Woodcuts and 20 coloured Plates. [With Systematic and Alphabetical Indexes.] 1890, 8vo. 1l.

Vol. XVI. Catalogue of the Picariæ in the Collection of the British Museum. *Upupæ* and *Trochili*, by Osbert Salvin. *Coraciæ*, of the families Cypselidæ, Caprimulgidæ, Podargidæ, and Steatornithidæ, by Ernst Hartert. Pp. xvi., 703. Woodcuts and 14 coloured Plates. [With Systematic and Alphabetical Indexes.] 1892, 8vo. 1l. 16s.

Vol. XVII. Catalogue of the Picariæ in the Collection of the British Museum. *Coraciæ* (contin.) and *Halcyones*, with the families Leptosomatidæ, Coraciidæ, Meropidæ, Alcedinidæ, Momotidæ, Totidæ and Coliidæ, by R. Bowdler Sharpe. *Bucerotes* and *Trogones* by W. R. Ogilvie Grant. Pp. xi., 522. Woodcuts and 17 coloured Plates. [With Systematic and Alphabetical Indexes.] 1892, 8vo. 1l. 10s.

Vol. XVIII. Catalogue of the Picariæ in the Collection of the British Museum. *Scansores*, containing the family Picidæ. By Edward Hargitt. Pp. xv., 597. Woodcuts and 15 coloured Plates. [With Systematic and Alphabetical Indexes.] 1890, 8vo. 1l. 6s.

Vol. XIX. Catalogue of the Picariæ in the Collection of the British Museum. *Scansores* and *Coccyges*: containing the families Rhamphastidæ, Galbulidæ, and Bucconidæ, by P. L. Sclater; and the families Indicatoridæ, Capitonidæ, Cuculidæ, and Musophagidæ, by

Catalogue of the Birds in the British Museum—*continued*.

G. E. Shelley. Pp. xii., 484 : 13 coloured Plates.
[With Systematic and Alphabetical Indexes.] 1891,
8vo. 1*l.* 5*s.*

Vol. XX. Catalogue of the Psittaci, or Parrots, in the
Collection of the British Museum. By T. Salvadori.
Pp. xvii., 658. Woodcuts and 18 coloured Plates.
[With Systematic and Alphabetical Indexes.] 1891,
8vo. 1*l.* 10*s.*

Vol. XXI. Catalogue of the Columbæ, or Pigeons, in
the Collection of the British Museum. By T. Salvadori.
Pp. xvii., 676. 15 coloured Plates. [With Systematic
and Alphabetical Indexes.] 1893, 8vo. 1*l.* 10*s.*

Vol. XXII. Catalogue of the Game Birds (*Pterocletes*,
Gallinæ, *Opisthocomi*, *Hemipodii*) in the Collection of
the British Museum. By W. R. Ogilvie Grant.
Pp. xvi., 585. 8 coloured Plates. [With Systematic
and Alphabetical Indexes.] 1893, 8vo. 1*l.* 6*s.*

Vol. XXIII. Catalogue of the Fulicariæ (Rallidæ and
Heliornithidæ) and Alectorides (Aramidæ, Eurypy-
gidæ, Mesitidæ, Rhinocetidæ, Gruidæ, Psophiidæ,
and Otididæ) in the Collection of the British Museum.
By R. Bowdler Sharpe. Pp. xiii., 353. 9 coloured
Plates. [With Systematic and Alphabetical Indexes.]
1894, 8vo. 20*s.*

Vol. XXIV. Catalogue of the Limicolæ in the Collection
of the British Museum. By R. Bowdler Sharpe.
Pp. xii., 794. Woodcuts and 7 coloured Plates. [With
Systematic and Alphabetical Indexes.] 1896, 8vo.
1*l.* 5*s.*

Vol. XXV. Catalogue of the Gaviæ and Tubinares in
the Collection of the British Museum. Gaviæ (Terns,
Gulls, and Skuas), by Howard Saunders. Tubinares
(Petrels and Albatrosses), by Osbert Salvin. Pp. xv.,
475. Woodcuts and 8 coloured Plates. [With Systematic
and Alphabetical Indexes.] 1896, 8vo. 1*l.* 1*s.*

Vol. XXVI. Catalogue of the Plataleæ, Herodiones,
Steganopodes, Pygopodes, Alcæ, and Impennes in the
Collection of the British Museum. Plataleæ (Ibises
and Spoonbills) and Herodiones (Hérons and Storks),
by R. Bowdler Sharpe. Steganopodes (Cormorants,
Gannets, Frigate-birds, Tropic-birds, and Pelicans),
Pygopodes (Divers and Grebes), Alcæ (Auks), and Im-
pennes (Penguins), by W. R. Ogilvie-Grant. Pp. xvii.,
687. Woodcuts and 14 coloured Plates. [With Sys-
tematic and Alphabetical Indexes.] 1898, 8vo. 1*l.* 5*s.*

Catalogue of the Birds in the British Museum—*continued*.

Vol. XXVII. Catalogue of the Chenomorphæ (Palamedææ, Phoenicopteri, Anseres), Crypturi, and Ratitæ in the Collection of the British Museum. By T. Salvadori. Pp. xv., 636. 19 coloured Plates. [With Systematic and Alphabetical Indexes.] 1895, 8vo. 1*l.* 12*s.*

A Hand-list of the Genera and Species of Birds. [Nomenclator Avium tum Fossilium tum Viventium.] By R. Bowdler Sharpe, LL.D. :—

Vol. I. Pp. xxi., 303. [With Systematic Index.] 1899, 8vo. 10*s.*

Vol. II. Pp. xv., 312. [With Systematic Index, and an Alphabetical Index to Vols. I. and II.] 1900, 8vo. 10*s.*

List of the Specimens of Birds in the Collection of the British Museum. By George Robert Gray :—

Part III., Section I. Ramphastidæ Pp. 16. [With Index.] 1855, 12mo. 6*d.*

Part III., Section II. Psittacidæ. Pp. 110. [With Index.] 1859, 12mo. 2*s.*

Part III., Sections III. and IV. Capitonidæ and Picidæ. Pp. 137. [With Index.] 1868, 12mo. 1*s.* 6*d.*

Part IV. Columbæ. Pp. 73. [With Index.] 1856, 12mo. 1*s.* 9*d.*

Part V. Gallinæ. Pp. iv., 120. [With an Alphabetical Index.] 1867, 12mo. 1*s.* 6*d.*

Catalogue of the Birds of the Tropical Islands of the Pacific Ocean in the Collection of the British Museum. By George Robert Gray, F.L.S., &c. Pp. 72. [With an Alphabetical Index.] 1859, 8vo. 1*s.* 6*d.*

REPTILES.

Catalogue of the Tortoises, Crocodiles, and Amphisbæniæ in the Collection of the British Museum. By Dr. J. E. Gray, F.R.S., &c. Pp. viii., 80. [With an Alphabetical Index.] 1844, 12mo. 1*s.*

Catalogue of Shield Reptiles in the Collection of the British Museum. By John Edward Gray, F.R.S., &c.:—

Appendix. Pp. 28. 1872, 4to. 2*s.* 6*d.*

Part II. Emydosaurians, Rhynchocephalia, and Amphisbæniæ. Pp. vi., 41. 25 Woodcuts. 1872, 4to. 3*s.* 6*d.*

Hand-List of the Specimens of Shield Reptiles in the British Museum. By Dr. J. E. Gray, F.R.S., F.L.S., &c. Pp. iv., 124. [With an Alphabetical Index.] 1873, 8vo. 4s.

Catalogue of the Chelonians, Rhynchocephalians, and Crocodiles in the British Museum (Natural History). New Edition. By George Albert Boulenger. Pp. x., 311. 73 Woodcuts and 6 Plates. [With Systematic and Alphabetical Indexes.] 1889, 8vo. 15s.

Catalogue of the Lizards in the British Museum (Natural History). Second Edition. By George Albert Boulenger :—

Vol. I. Geckonidæ, Eublepharidæ, Uroplatidæ, Pygopodidæ, Agamidæ. Pp. xii., 436. 32 Plates. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 20s.

Vol. II. Iguanidæ, Xenosauridæ, Zonuridæ, Anguidæ, Anniellidæ, Helodermatidæ, Varanidæ, Xantusiidæ, Teiidæ, Amphisbænidæ. Pp. xiii., 497. 24 Plates. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 20s.

Vol. III. Lacertidæ, Gerrhosauridæ, Scincidæ, Anelytropidæ, Dibamidæ, Chamæleontidæ. Pp. xii., 575. 40 Plates. [With a Systematic Index and an Alphabetical Index to the three volumes.] 1887, 8vo. 17. 6s.

Catalogue of the Snakes in the British Museum (Natural History). By George Albert Boulenger, F.R.S. :—

Vol. I., containing the families Typhlopidae, Glauconiidae, Boidæ, Hysiidae, Uropeltidae, Xenopeltidae, and Colubridæ aglyphæ, part. Pp. xiii., 448 : 26 Woodcuts and 28 Plates. [With Systematic and Alphabetical Indexes.] 1893, 8vo. 17. 1s.

Vol. II., containing the conclusion of the Colubridæ aglyphæ. Pp. xi., 382 : 25 Woodcuts and 20 Plates. [With Systematic and Alphabetical Indexes.] 1894, 8vo. 17s. 6d.

Vol. III., containing the Colubridæ (Opisthoglyphæ and Proteroglyphæ), Amblycephalidæ, and Viperidæ. Pp. xiv., 727 : 37 Woodcuts and 25 Plates. [With Systematic Index, and Alphabetical Index to the 3 volumes.] 1896, 8vo. 17. 6s.

Catalogue of Colubrine Snakes in the Collection of the British Museum. By Dr. Albert Günther. Pp. xvi., 281. [With Geographic, Systematic, and Alphabetical Indexes.] 1858, 12mo. 4s.

BATRACHIANS.

Catalogue of the Batrachia Salientia in the Collection of the British Museum. By Dr. Albert Günther. Pp. xvi., 160. 12 Plates. [With Systematic, Geographic, and Alphabetical Indexes.] 1858, 8vo. 6s.

FISHES.

Catalogue of the Fishes in the British Museum. Second edition. Vol. I. Catalogue of the Perciform Fishes in the British Museum. Vol. I. Containing the Centrarchidæ, Percidæ, and Serranidæ (part). By George Albert Boulenger, F.R.S. Pp. xix., 394. Woodcuts and 15 Plates. [With Systematic and Alphabetical Indexes.] 1895, 8vo. 15s.

List of the Specimens of Fish in the Collection of the British Museum. Part I. Chondropterygii. By J. E. Gray. Pp. x., 160. 2 Plates. [With Systematic and Alphabetical Indexes.] 1851, 12mo. 3s.

Catalogue of Fish collected and described by Laurence Theodore Gronow, now in the British Museum. Pp. vii., 196. [With a Systematic Index.] 1854, 12mo. 3s. 6d.

Catalogue of Apodal Fish in the Collection of the British Museum. By Dr. Kaup. Pp. viii., 163. 11 Woodcuts and 19 Plates. 1856, 8vo. 10s.

Catalogue of Lophobranchiate Fish in the Collection of the British Museum. By J. J. Kaup, Ph.D., &c. Pp. iv., 80. 4 Plates. [With an Alphabetical Index.] 1856, 12mo. 2s.

MOLLUSCA.

Guide to the Systematic Distribution of Mollusca in the British Museum. Part I. By John Edward Gray, Ph.D., F.R.S., &c. Pp. xii., 230. 121 Woodcuts. 1857, 8vo. 5s.

List of the Shells of the Canaries in the Collection of the British Museum, collected by MM. Webb and Berthelot. Described and figured by Prof. Alcide D'Orbigny in the "Histoire Naturelle des Iles Canaries." Pp. 32. 1854, 12mo. 1s.

List of the Shells of Cuba in the Collection of the British Museum collected by M. Ramon de la Sagra. Described by Prof. Alcide d'Orbigny in the "Histoire de l'Île de Cuba." Pp. 48. 1854, 12mo. 1s.

List of the Shells of South America in the Collection of the British Museum. Collected and described by M. Alcide D'Orbigny in the "Voyage dans l'Amérique Méridionale." Pp. 89. 1854, 12mo. 2s.

Catalogue of the Collection of Mazatlan Shells in the British Museum, collected by Frederick Reigen. Described by Philip P. Carpenter. Pp. xvi., 552. 1857, 12mo. 8s.

List of Mollusca and Shells in the Collection of the British Museum, collected and described by MM. Eydoux and Souleyet in the "Voyage autour du Monde, exécuté pendant les années 1836 et 1837, sur la Corvette 'La Bonite,'" and in the "Histoire naturelle des Mollusques 'Ptéropodes.'" Par MM. P. C. A. L. Rang et Souleyet. Pp. iv., 27. 1855, 12mo. 8d.

Catalogue of the Phaneropneumona, or Terrestrial Operculated Mollusca, in the Collection of the British Museum. By Dr. L. Pfeiffer. Pp. 324. [With an Alphabetical Index.] 1852, 12mo. 5s.

Catalogue of Pulmonata, or Air Breathing Mollusca, in the Collection of the British Museum. Part I. By Dr. Louis Pfeiffer. Pp. iv., 192. Woodcuts. 1855, 12mo. 2s. 6d.

Catalogue of the Auriculidæ, Proserpinidæ, and Truncatellidæ in the Collection of the British Museum. By Dr. Louis Pfeiffer. Pp. iv., 150. Woodcuts. 1857, 12mo. 1s. 9d.

List of the Mollusca in the Collection of the British Museum. By John Edward Gray, Ph.D., F.R.S., &c.

Part I. Volutidæ. Pp. 23. 1855, 12mo. 6d.

Part II. Olividæ. Pp. 41. 1865, 12mo. 1s.

Catalogue of the Conchifera, or Bivalve Shells, in the Collection of the British Museum. By M. Deshayes:—

Part I. Veneridæ, Cyprinidæ, Glauconomidæ, and Petricoladæ. Pp. iv., 216. 1853, 12mo. 3s.

Part II. Petricoladæ (concluded); Corbiculadæ. Pp. 217–292. [With an Alphabetical Index to the two parts.] 1854, 12mo. 6d.

BRACHIOPODA.

Catalogue of Brachiopoda Ancylopoda or Lamp Shells in the Collection of the British Museum. [Issued as "Catalogue of the Mollusca, Part IV."] Pp. iv., 128. 25 Woodcuts. [With an Alphabetical Index.] 1853, 12mo. 3s.

POLYZOA.

Catalogue of Marine Polyzoa in the Collection of the British Museum. Part III. Cyclostomata. By George Busk, F.R.S. Pp. viii., 39. 38 Plates. [With a Systematic Index.] 1875, 8vo. 5s.

CRUSTACEA.

Catalogue of the Specimens of Amphipodous Crustacea in the Collection of the British Museum. By C. Spence Bate, F.R.S., &c. Pp. iv., 399. 58 Plates. [With an Alphabetical Index.] 1862, 8vo. 1*l.* 5*s.*

ARACHNIDA.

Descriptive Catalogue of the Spiders of Burma, based upon the Collection made by Eugene W. Oates and preserved in the British Museum. By T. Thorell. Pp. xxxvi., 406. [With Systematic List and Alphabetical Index.] 1895, 8vo. 10*s.* 6*d.*

MYRIOPODA.

Catalogue of the Myriapoda in the Collection of the British Museum. By George Newport, F.R.S., P.E.S., &c. Part I. Chilopoda. Pp. iv., 96. [With an Alphabetical Index.] 1856, 12mo. 1*s.* 9*d.*

INSECTS.

Coleopterous Insects.

Nomenclature of Coleopterous Insects in the Collection of the British Museum :—

Part VI. Passalidæ. By Frederick Smith. Pp. iv., 23. 1 Plate. [With Index.] 1852, 12mo. 8*d.*

Part VII. Longicornia, I. By Adam White. Pp. iv., 174. 4 Plates. 1853, 12mo. 2*s.* 6*d.*

Part VIII. Longicornia, II. By Adam White. Pp. 237. 6 Plates. 1855, 12mo. 3*s.* 6*d.*

Part IX. Cassididæ. By Charles H. Boheman, Professor of Natural History, Stockholm. Pp. 225. [With Index.] 1856, 12mo. 3*s.*

Illustrations of Typical Specimens of Coleoptera in the Collection of the British Museum. Part I. Lycidæ. By Charles Owen Waterhouse. Pp. x., 83. 18 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1879, 8vo. 16*s.*

Catalogue of the Coleopterous Insects of Madeira in the Collection of the British Museum. By T. Vernon Wollaston, M.A., F.L.S. Pp. xvi., 234 : 1 Plate. [With a Topographical Catalogue and an Alphabetical Index.] 1857, 8vo. 3s.

Catalogue of the Coleopterous Insects of the Canaries in the Collection of the British Museum. By T. Vernon Wollaston, M.A., F.L.S. Pp. xiii., 648. [With Topographical and Alphabetical Indexes.] 1864, 8vo. 10s. 6d.

Catalogue of Halticidæ in the Collection of the British Museum. By the Rev. Hamlet Clark, M.A., F.L.S. Physapodes and CEdipodes. Part I. Pp. xii., 301. Frontispiece and 9 Plates. 1860, 8vo. 7s.

Catalogue of Hispidæ in the Collection of the British Museum. By Joseph S. Baly, M.E.S., &c. Part I. Pp. x., 172. 9 Plates. [With an Alphabetical Index.] 1858, 8vo. 6s.

Hymenopterous Insects.

Catalogue of Hymenopterous Insects in the Collection of the British Museum. By Frederick Smith. 12mo. :—

Part I. Andrenidæ and Apidæ. Pp. 197. 6 Plates. 1853, 2s. 6d.

Part II. Apidæ. Pp. 199–465. 6 Plates. [With an Alphabetical Index.] 1854. 6s.

Part III. Mutillidæ and Pompilidæ. Pp. 206. 6 Plates. 1855. 6s.

Part IV. Sphegidæ, Larridæ, and Crabronidæ. Pp. 207–497. 6 Plates. [With an Alphabetical Index.] 1856. 6s.

Part V. Vespidæ. Pp. 147. 6 Plates. [With an Alphabetical Index.] 1857. 6s.

Part VI. Formicidæ. Pp. 216. 14 Plates. [With an Alphabetical Index.] 1858. 6s.

Part VII. Dorylidæ and Thynnidæ. Pp. 76. 3 Plates. [With an Alphabetical Index.] 1859. 2s.

List of Hymenoptera, with descriptions and figures of the Typical Specimens in the British Museum. Vol. I., Tenthredinidæ and Siricidæ. By W. F. Kirby. Pp. xxviii., 450. 16 Coloured Plates. [With Systematic and Alphabetical Indexes.] 1882, 8vo. 1l. 18s.

Dipterous Insects.

List of the Specimens of Dipterous Insects in the Collection of the British Museum. By Francis Walker, F.L.S.
Part VII. Supplement III. Asilidæ. Pp. ii., 507-775.
1855, 12mo.. 3s. 6d.

Lepidopterous Insects.

Catalogue of the Lepidoptera Phalænæ in the British Museum. By Sir George F. Hampson, Bart. :—

Vol. I. Catalogue of the Syntomidæ in the Collection of the British Museum. Pp. xxi., 559 : 285 Woodcuts. [With Systematic and Alphabetical Indexes.] 1898, 8vo. 15s.

—Atlas of 17 Coloured Plates, 8vo. 15s.

Vol. II. Catalogue of the Arctiadæ (Nolinæ, Lithosianæ) in the Collection of the British Museum. Pp. xx., 589. 411 Woodcuts. [With Systematic and Alphabetical Indexes.] 1900, 8vo. 18s.

—Atlas of 18 Coloured Plates (xviii.-xxxv.), 8vo. 15s.

Illustrations of Typical Specimens of Lepidoptera Heterocera in the Collection of the British Museum :—

Part V. By Arthur Gardiner Butler. Pp. xii., 74. 78-100 Coloured Plates. [With a Systematic Index.] 1881, 4to. 2l. 10s.

Part VI. By Arthur Gardiner Butler. Pp. xv., 89. 101-120 Coloured Plates. [With a Systematic Index.] 1886, 4to. 2l. 4s.

Part VII. By Arthur Gardiner Butler. Pp. iv., 124. 121-138 Coloured Plates. [With a Systematic List.] 1889, 4to. 2l.

Part VIII. The Lepidoptera Heterocera of the Nilgiri District. By George Francis Hampson. Pp. iv., 144. 139-156 Coloured Plates. [With a Systematic List.] 1891, 4to. 2l.

Part IX. The Macrolepidoptera Heterocera of Ceylon. By George Francis Hampson. Pp. v., 182. 157-176 Coloured Plates. [With a General Systematic List of Species collected in, or recorded from, Ceylon.] 1893, 4to. 2l. 2s.

Catalogue of Diurnal Lepidoptera described by Fabricius in the Collection of the British Museum. By Arthur Gardiner Butler, F.L.S., &c. Pp. iv., 303. 3 Plates. 1869, 8vo. 7s. 6d.

Specimen of a Catalogue of Lycænidae in the British Museum. By W. C. Hewitson. Pp. 15. 8 Coloured Plates. 1862, 4to. 1l. 1s.

List of Lepidopterous Insects in the Collection of the British Museum. Part I. Papilionidæ. By G. R. Gray, F.L.S. Pp. 106. [With an Alphabetical Index.] 1856, 12mo. 2s.

List of the Specimens of Lepidopterous Insects in the Collection of the British Museum. By Francis Walker. 12mo. :—

Part XIX. Pyralides. Pp. 799–1036. [With an Alphabetical Index to Parts XVI.–XIX.] 1859, 3s. 6d.

Part XX. Geometrites. Pp. 1–276. 1860, 4s.

Part XXI. ——— Pp. 277–498. 1860, 3s.

Part XXII. ——— Pp. 499–755. 1861, 3s. 6d.

Part XXIII. ——— Pp. 756–1020. 1861, 3s. 6d.

Part XXIV. ——— Pp. 1021–1280. 1862, 3s. 6d.

Part XXV. ——— Pp. 1281–1477. 1862, 3s.

Part XXVI. ——— Pp. 1478–1796. [With an Alphabetical Index to Parts XX.–XXVI.] 1862, 4s. 6d.

Part XXVII. Crambites and Tortricites. Pp. 1–286. 1863, 4s.

Part XXVIII. Tortricites and Tineites. Pp. 287–561. 1863, 4s.

Part XXIX. Tineites. Pp. 562–835. 1864, 4s.

Part XXX. ——— Pp. 836–1096. [With an Alphabetical Index to Parts XXVII.–XXX.] 1864, 4s.

Part XXXI. Supplement. Pp. 1–321. 1864, 5s.

Part XXXII. ——— Part 2. Pp. 322–706. 1865, 5s.

Part XXXIII. ——— Part 3. Pp. 707–1120. 1865, 6s.

Part XXXIV. ——— Part 4. Pp. 1121–1533. 1865, 5s. 6d.

Part XXXV. ——— Part 5. Pp. 1534–2040. [With an Alphabetical Index to Parts XXXI.–XXXV.] 1866, 7s.

Neuropterous Insects.

Catalogue of the Specimens of Neuropterous Insects in the Collection of the British Museum. By Francis Walker. 12mo. :—

Part I. Phryganides—Perlides. Pp. iv., 192. 1852, 2s. 6d.

Part II. Sialidæ—Nemopterides. Pp. ii., 193–476. 1853, 3s. 6d.

Part III. Termitidæ—Ephemeridæ. Pp. ii., 477–585. 1853, 1s. 6d.

Catalogue of the Specimens of Neuropterous Insects in the Collection of the British Museum. By Dr. H. Hagen. Part I. Termitina. Pp. 34. 1858, 12mo. 6d.

Orthopterous Insects.

Catalogue of Orthopterous Insects in the Collection of the British Museum. Part I. Phasmidæ. By John Obadiah Westwood, F.L.S., &c. Pp. 195. 48 Plates. [With an Alphabetical Index.] 1859, 4to. 3l.

Catalogue of the Specimens of Blattariæ in the Collection of the British Museum. By Francis Walker, F.L.S., &c. Pp. 239. [With an Alphabetical Index.] 1868, 8vo. 5s. 6d.

Catalogue of the Specimens of Dermaptera Saltatoria [Part I.] and Supplement to the Blattariæ in the Collection of the British Museum. Gryllidæ. Blattariæ. Locustidæ. By Francis Walker, F.L.S., &c. Pp. 224. [With an Alphabetical Index.] 1869, 8vo. 5s.

Catalogue of the Specimens of Dermaptera Saltatoria in the Collection of the British Museum. By Francis Walker, F.L.S., &c.—

Part II. Locustidæ (continued). Pp. 225–423. [With an Alphabetical Index.] 1869, 8vo. 4s. 6d.

Part III. Locustidæ (continued).—Acrididæ. Pp. 425–604. [With an Alphabetical Index.] 1870, 8vo. 4s.

Part IV. Acrididæ (continued). Pp. 605–809. [With an Alphabetical Index.] 1870, 8vo. 6s.

Part V. Tettigidæ.—Supplement to the Catalogue of Blattariæ.—Supplement to the Catalogue of Dermaptera Saltatoria (with remarks on the Geographical Distribution of Dermaptera). Pp. 811–850; 43; 116. [With Alphabetical Indexes.] 1870, 8vo. 6s.

Hemipterous Insects.

Catalogue of the Specimens of Heteropterous Hemiptera in the Collection of the British Museum. By Francis Walker, F.L.S., &c. 8vo. :—

Part I. Scutata. Pp. 240. 1867. 5s.

Part II. Scutata (continued). Pp. 241–417. 1867. 4s.

Part III. Pp. 418–599. [With an Alphabetical Index to Parts I., II., III., and a Summary of Geographical Distribution of the Species mentioned.] 1868. 4s. 6d.

Part IV. Pp. 211. [With Alphabetical Index.] 1871. 6s.

Part V. Pp. 202. [With Alphabetical Index.] 1872. 5s.

Part VI. Pp. 210. [With Alphabetical Index.] 1873. 5s.

Part VII. Pp. 213. [With Alphabetical Index.] 1873. 6s.

Part VIII. Pp. 220. [With Alphabetical Index.] 1873. [6s. 6d.]

Homopterous Insects.

List of the Specimens of Homopterous Insects in the Collection of the British Museum. By Francis Walker. Supplement. Pp. ii., 369. [With an Alphabetical Index.] 1858, 12mo., 4s. 6d.

VERMES.

Catalogue of the Species of Entozoa, or Intestinal Worms, contained in the Collection of the British Museum. By Dr. Baird. Pp. iv., 132. 2 Plates. [With an Index of the Animals in which the Entozoa mentioned in the Catalogue are found, and an Index of Genera and Species.] 1853, 12mo. 2s.

ANTHOZOA.

Catalogue of Sea-pens or Pennatulariidæ in the Collection of the British Museum. By J. E. Gray, F.R.S., &c. Pp. iv., 40. 2 Woodcuts. 1870, 8vo. 1s. 6d.

Catalogue of Lithophytes or Stony Corals in the Collection of the British Museum. By J. E. Gray, F.R.S., &c. Pp. iv., 51. 14 Woodcuts. 1870, 8vo. 3s.

Catalogue of the Madreporarian Corals in the British Museum (Natural History) :—

Vol. I. The Genus Madrepora. By George Brook. Pp. xi., 212. 35 Collotype Plates. [With Systematic and Alphabetical Indexes, and Explanation of the Plates.] 1893, 4to. 17. 4s.

Vol. II. The Genus *Turbinaria* ; the Genus *Astræopora*. By Henry M. Bernard, M.A. Cantab., F.L.S., F.Z.S. Pp. iv., 106. 30 Collotype and 3 Lithographic Plates. [With Index of Generic and Specific Names, and Explanation of the Plates.] 1896, 4to. 18s.

Vol. III. The Genus *Montipora* ; the Genus *Anacropora*. By Henry M. Bernard, M.A. Pp. vii., 192. 30 Collotype and 4 Lithographic Plates. [With Systematic Index, Index of Generic and Specific Names, and Explanation of the Plates.] 1897. 4to. 17. 4s.

BRITISH ANIMALS.

Catalogue of British Birds in the Collection of the British Museum. By George Robert Gray, F.L.S., F.Z.S., &c. Pp. xii., 248. [With a List of Species.] 1863, 8vo. 3s. 6d.

Catalogue of British Hymenoptera in the Collection of the British Museum. Second edition. Part. I. Andrenidæ and Apidæ. By Frederick Smith, M.E.S. New Issue. Pp. xi., 236. 11 Plates. [With Systematic and Alphabetical Indexes.] 1891, 8vo. 6s.

Catalogue of British Fossorial Hymenoptera, Formicidæ, and Vespidæ in the Collection of the British Museum. By Frederick Smith, V.P.E.S. Pp. 236. 6 Plates. [With an Alphabetical Index.] 1858, 12mo. 6s.

A Catalogue of the British Non-parasitical Worms in the Collection of the British Museum. By George Johnston, M.D., Edin., F.R.C.L., Ed., LL.D., Marischal Coll., Aberdeen, &c. Pp. 365. Woodcuts and 24 Plates. [With an Alphabetical Index.] 1865, 8vo. 7s.

Catalogue of the British Echinoderms in the British Museum (Natural History). By F. Jeffrey Bell, M.A. Pp. xvii., 202. Woodcuts and 16 Plates (2 Coloured). [With Table of Contents, Tables of Distribution, Alphabetical Index, Description of the Plates, &c.] 1892, 8vo. 12s. 6d.

List of the Specimens of British Animals in the Collection of the British Museum ; with Synonyma and References to figures. 12mo. :—

Part V. Lepidoptera. By J. F. Stephens. 2nd Edition. Revised by H. T. Stainton and E. Shepherd. Pp. iv., 224. 1856. 1s. 9d.

Part VI. Hymenoptera. By F. Smith. Pp. 134. 1851. 2s.

Part VII. Mollusca, Acephala and Brachiopoda. By Dr. J. E. Gray. Pp. iv., 167. 1851. 3s. 6d.

- Part VIII. Fish. By Adam White. Pp. xxiii., 164.
(With Index and List of Donors.) 1851. 3s. 6d.
- Part IX. Eggs of British Birds. By George Robert Gray. Pp. 143. 1852. 2s. 6d.
- Part XI. Anoplura, or Parasitic Insects. By H. Denny. Pp. iv., 51. 1852. 1s.
- Part XII. Lepidoptera (continued). By James F. Stephens. Pp. iv., 54. 1852. 9d.
- Part XIII. Nomenclature of Hymenoptera. By Frederick Smith. Pp. iv., 74. 1853, 1s. 4d.
- Part XIV. Nomenclature of Neuroptera. By Adam White. Pp. iv., 16. 1853, 6d.
- Part XV. Nomenclature of Diptera, I. By Adam White. Pp. iv., 42. 1853. 1s.
- Part XVI. Lepidoptera (completed). By H. T. Stainton. Pp. 199. [With an Index.] 1854. 3s.
- Part XVII. Nomenclature of Anoplura, Euplexoptera, and Orthoptera. By Adam White. Pp. iv., 17. 1855. 6d.

PLANTS.

Illustrations of the Botany of Captain Cook's Voyage Round the World in H.M.S. "Endeavour" in 1768-71. By the Right Hon. Sir Joseph Banks, Bart., K.B., P.R.S., and Dr. Daniel Solander, F.R.S. With Determinations by James Britten, F.L.S., Senior Assistant, Department of Botany, British Museum. Part I.—Australian Plants. 101 Copper-plates [after paintings by F. P. Nodder], with 31 pages of descriptive text. 1900, fol. 25s.

Catalogue of the African Plants collected by Dr. Friedrich Welwitsch in 1853-61 :—

Vol. I. Dicotyledons. By William Philip Hiern, M.A., F.L.S., &c. :—

Part I. [Ranunculaceæ to Rhizophoraceæ.] Pp. xxvi., 336. [With Portrait of Dr. Welwitsch, Introduction, Bibliography, and Index of Genera.] 1896, 8vo. 7s. 6d.

Part II. Combretaceæ to Rubiaceæ. Pp. 337-510. [With Index of Genera.] 1898, 8vo. 4s.

Part III. Dipsaceæ to Scrophulariaceæ. Pp. 511-784. [With Index of Genera.] 1898, 8vo. 5s.

Part IV. Lentibulariaceæ to Ceratophylleæ. Pp. 785-1035. [With Index.] 1900, 8vo. 5s.

Vol. II., Part I. Monocotyledons and Gymnosperms. By Alfred Barton Rendle, M.A., D.Sc. F.L.S., Assistant, Department of Botany. Pp. 260. [With Index of Genera.] 1899, 8vo. 6s.

A Monograph of Lichens found in Britain : being a Descriptive Catalogue of the Species in the Herbarium of the British Museum. By the Rev. James M. Crombie, M.A., F.L.S., F.G.S., &c. Part I. Pp. viii., 519 : 74 Woodcuts. [With Glossary, Synopsis, Tabular Conspectus, and Index.] 1894, 8vo. 16s.

A Monograph of the Mycetozoa : being a Descriptive Catalogue of the Species in the Herbarium of the British Museum. By Arthur Lister, F.L.S. Pp. 224. 78 Plates and 51 Woodcuts. [With Synopsis of Genera and List of Species, and Index.] 1894, 8vo. 15s.

List of British Diatomaceæ in the Collection of the British Museum. By the Rev. W. Smith, F.L.S., &c. Pp. iv., 55. 1859, 12mo. 1s.

FOSSILS.

Catalogue of the Fossil Mammalia in the British Museum (Natural History). By Richard Lydekker, B.A., F.G.S. :—

Part I. Containing the Orders Primates, Chiroptera, Insectivora, Carnivora, and Rodentia. Pp. xxx., 268. 33 Woodcuts. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 5s.

Part II. Containing the Order Ungulata, Suborder Artiodactyla. Pp. xxii., 324. 39 Woodcuts. [With Systematic and Alphabetical Indexes.] 1885, 8vo. 6s.

Part III. Containing the Order Ungulata, Suborders Perissodactyla, Toxodontia, Condylarthra, and Amblypoda. Pp. xvi., 186. 30 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1886, 8vo. 4s.

Part IV. Containing the Order Ungulata, Suborder Proboscidea. Pp. xxiv., 235. 32 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1886, 8vo. 5s.

Part V. Containing the Group Tillodontia, the Orders Sirenia, Cetacea, Edentata, Marsupialia, Monotremata, and Supplement. Pp. xxxv., 345. 55 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1887, 8vo. 6s.

Catalogue of the Fossil Birds in the British Museum (Natural History). By Richard Lydekker, B.A. Pp. xxvii., 368. 75 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1891, 8vo. 10s. 6d.

Catalogue of the Fossil Reptilia and Amphibia in the British Museum (Natural History). By Richard Lydekker, B.A., F.G.S. :—

Part I. Containing the Orders Ornithosauria, Crocodilia, Dinosauria, Squamata, Rhynchocephalia, and Proterosauria. Pp. xxviii., 309. 69 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1888, 8vo. 7s. 6d.

Part II. Containing the Orders Ichthyopterygia and Sauropterygia. Pp. xxi., 307. 85 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1889, 8vo. 7s. 6d.

Part III. Containing the Order Chelonina. Pp. xviii., 239. 53 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1889, 8vo. 7s. 6d.

Part IV. Containing the Orders Anomodontia, Ecaudata, Caudata, and Labyrinthodontia; and Supplement. Pp. xxiii., 295. 66 Woodcuts. [With Systematic Index, Alphabetical Index of Genera and Species, including Synonyms, and Alphabetical Index of Genera and Species to the entire work.] 1890, 8vo. 7s. 6d.

Catalogue of the Fossil Fishes in the British Museum (Natural History). By Arthur Smith Woodward, F.G.S., F.Z.S. :—

Part I. Containing the Elasmobranchii. Pp. xlvii., 474. 13 Woodcuts and 17 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1889, 8vo. 21s.

Part II. Containing the Elasmobranchii (Acanthodii), Holocephali, Ichthyodorulites, Ostracodermi, Dipnoi, and Teleostomi (Crossopterygii and Chondrosteian Actinopterygii). Pp. xlv., 567. 58 Woodcuts and 16 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1891, 8vo. 21s.

Part III. Containing the Actinopterygian Teleostomi of the Orders *Chondrostei* (concluded), *Protospondyli*, *Aethospondyli*, and *Isospondyli* (in part). Pp. xlii., 544. 45 Woodcuts and 18 Plates. [With Alphabetical Index, and Systematic Index of Genera and Species.] 1895, 8vo. 21s.

Systematic List of the Edwards Collection of British Oligocene and Eocene Mollusca in the British Museum (Natural History), with references to the type-specimens from similar horizons contained in other collections belonging to the Geological Department of the Museum. By Richard Bullen Newton, F.G.S. Pp. xxviii., 365. [With table of Families and Genera, Bibliography, Correlation-table, Appendix, and Alphabetical Index.] 1891, 8vo. 6s.

Catalogue of Tertiary Mollusca in the Department of Geology, British Museum (Natural History). Part I. The Australasian Tertiary Mollusca. By George F. Harris, F.G.S., &c. Pp. xxvi., 407. 8 Plates. [With Table of Families, Genera, and SubGenera, and Index.] 1897, 8vo. 10s.

Catalogue of the Fossil Cephalopoda in the British Museum (Natural History) :—

Part I. Containing part of the Suborder Nautiloidea, consisting of the families Orthoceratidæ, Endoceratidæ, Actinoceratidæ, Gomphoceratidæ, Ascoceratidæ, Poterioceratidæ, Cyrtoceratidæ, and Supplement. By Arthur H. Foord, F.G.S. Pp. xxxi., 344. 51 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1888, 8vo. 10s. 6d.

Part II. Containing the remainder of the Suborder Nautiloidea, consisting of the families Lituitidæ, Trochoceratidæ, Nautilidæ, and Supplement. By Arthur H. Foord, F.G.S. Pp. xxviii., 407. 86 Woodcuts. [With Systematic Index, and Alphabetical Index of Genera and Species, including Synonyms.] 1891, 8vo. 15s.

Part III. Containing the Bactritidæ, and part of the Suborder Ammonoidea. By Arthur H. Foord, Ph.D., F.G.S., and George Charles Crick, A.R.S.M., F.G.S. Pp. xxxiii., 303. 146 Woodcuts. [With Systematic Index of Genera and Species, and Alphabetical Index.] 1897, 8vo. 12s. 6d.

List of the Types and Figured Specimens of Fossil Cephalopoda in the British Museum (Natural History). By G. C. Crick, F.G.S. Pp. 103. [With Index.] 1898, 8vo. 2s. 6d.

A Catalogue of British Fossil Crustacea, with their Synonyms and the Range in Time of each Genus and Order. By Henry Woodward, F.R.S. Pp. xii., 155. [With an Alphabetical Index.] 1877, 8vo. 5s.

Catalogue of the Fossil Bryozoa in the Department of Geology, British Museum (Natural History):—

The Jurassic Bryozoa. By J. W. Gregory, D.Sc., F.G.S., F.Z.S. Pp. [viii.,] 239 : 22 Woodcuts and 11 Plates. [With List of Species and Distribution, Bibliography, Index, and Explanation of Plates.] 1896, 8vo. 10s.

The Cretaceous Bryozoa. Vol. I. By J. W. Gregory, D.Sc., F.G.S., F.Z.S. Pp. xiv., 457 : 64 Woodcuts and 17 Plates. [With Index and Explanation of Plates.] 1899, 8vo. 16s.

Catalogue of the Blastoidea in the Geological Department of the British Museum (Natural History), with an account of the morphology and systematic position of the group, and a revision of the genera and species. By Robert Etheridge, jun., of the Department of Geology, British Museum (Natural History), and P. Herbert Carpenter, D.Sc., F.R.S., F.L.S. (of Eton College). Pp. xv., 322. 20 Plates. [With Preface by Dr. H. Woodward, Table of Contents, General Index, Explanations of the Plates, &c.] 1886, 4to. 25s.

The Genera and Species of Blastoidea, with a List of the Specimens in the British Museum (Natural History). By F. A. Bather, M.A., F.G.S., of the Geological Department. Pp. x., 70. 1 Woodcut. 1899, 8vo. 3s.

Catalogue of the Palæozoic Plants in the Department of Geology and Palæontology, British Museum (Natural History). By Robert Kidston, F.G.S. Pp. viii., 288. [With a list of works quoted, and an Index.] 1886, 8vo. 5s.

Catalogue of the Mesozoic Plants in the Department of Geology, British Museum (Natural History). By A. C. Seward, M.A., F.R.S., F.G.S., University Lecturer in Botany and Fellow of Emmanuel College, Cambridge :—

Part I. The Wealden Flora. Part I. Thallophyta—Pteridophyta. Pp. xxxviii., 179. 17 Woodcuts and 11 Plates. [With Preface by Dr. Woodward, Alphabetical Index, Explanations of the Plates, &c.] 1894, 8vo. 10s.

Part II. The Wealden Flora. Part II. Gymnospermæ. Pp. viii., 259. 9 Woodcuts and 20 Plates. [With Alphabetical Index, Explanations of the Plates, &c.] 1895, 8vo. 15s.

Part III. The Jurassic Flora. Part I. The Yorkshire Coast. Pp. xii., 341. 53 Woodcuts and 21 Plates. [With Preface by Dr. Woodward, Alphabetical Index, Explanations of the Plates, &c.] 1900, 8vo. 20s.

GUIDE-BOOKS.

(To be obtained only at the Museum.)

Guide to the Galleries of Mammalia in the Department of Zoology of the British Museum (Natural History). 6th Edition. Pp. 120. 57 Woodcuts and 4 Plans. Index. 1898, 8vo. 6*d*.

Guide to the Galleries of Reptiles and Fishes in the Department of Zoology of the British Museum (Natural History). 4th Edition. Pp. iv., 119. 101 Woodcuts. Index. 1898. 8vo. 6*d*.

A Guide to the Fossil Mammals and Birds in the Department of Geology and Palæontology in the British Museum (Natural History). 7th Edition. [By Henry Woodward.] Pp. xii., 103. 116 Woodcuts. [With List of Illustrations, Table of Stratified Rocks, and Index.] 1896, 8vo. 6*d*.

A Guide to the Fossil Reptiles and Fishes in the Department of Geology and Palæontology in the British Museum (Natural History). [By Henry Woodward.] Pp. xiv., 129 : 165 Woodcuts. [With List of Illustrations, Table of Stratified Rocks, and Index.] 1896, 8vo. 6*d*.

A Guide to the Fossil Invertebrates and Plants in the Department of Geology and Palæontology in the British Museum (Natural History). [By Henry Woodward.] Pp. xvi., 158. 182 Woodcuts. [With List of Illustrations, Table of Stratified Rocks, Introduction, and Index.] 1897, 8vo. 1*s*.

The same, in two parts :—

Part I. Mollusca to Bryozoa. Pp. xii., 64. 107 Woodcuts. [With List of Illustrations, Table of Stratified Rocks, and Introduction.] 1897, 8vo. 6*d*.

Part II. Insecta to Plants, &c. Pp. ix., 64*–158. Woodcuts 108–182. [With List of Illustrations and Index to the two parts.] 1897, 8vo. 6*d*.

Guide to Sowerby's Models of British Fungi in the Department of Botany, British Museum (Natural History). By Worthington G. Smith, F.L.S. Pp. 82. 93 Woodcuts. With Table of Diagnostic Characters, and Index. [Second Edition.] 1898, 8vo. 4*d*.

Guide to the British Mycetoza exhibited in the Department of Botany, British Museum (Natural History). By Arthur Lister, F.L.S. Pp. 42. 44 Woodcuts. Index. 1895, 8vo. 3*d*.

A Guide to the Mineral Gallery of the British Museum (Natural History). [By L. Fletcher, M.A., F.R.S.] Pp. 32. Plan. 1900, 8vo. 1*d*.

The Student's Index to the Collection of Minerals, British Museum (Natural History). [By L. Fletcher, M.A., F.R.S.] Pp. 34. With a Plan of the Mineral Gallery. 1899, 8vo. 2*d*.

An Introduction to the Study of Minerals, with a Guide to the Mineral Gallery of the British Museum (Natural History). By L. Fletcher, M.A., F.R.S. Pp. 123. 41 Woodcuts. With Plan of the Mineral Gallery and Index. 1897, 8vo. 6*d*.

An Introduction to the Study of Rocks. By L. Fletcher, M.A., F.R.S. Pp. 118. [With plan of the Mineral Gallery, Table of Contents, and Index.] 1898, 8vo. 6*d*.

An Introduction to the Study of Meteorites, with a List of the Meteorites represented in the Collection. By L. Fletcher, M.A., F.R.S., &c. Pp. 95. [With a Plan of the Mineral Gallery, and an Index to the Meteorites represented in the Collection.] 1896, 8vo. 6*d*.
